Convincingly Good

An unretouched photo of fourth Hen, Single Comb White Leghorns, Boston, 1916.

PEOPLE WITH EYES will always pay admiration to beauty. There is never a time that BEAUTY requires apologies or explanations. It is accepted everywhere at its face value, as PROOF of QUALITY. We want you to note the beauty lines that our birds possess and call your attention to the unretouched photograph of one of our winning cock birds as shown on page 322 of February issue of this journal.

Proof of Quality

of our birds is their consistent winning at Boston and other large New England shows. Bear in mind that we are in the section of the country that is the "home of the fancier," where a win means that your bird is as perfect as it is possible to breed them. Our farm consists of 37 acres and our time is devoted exclusively to breeding good birds.

S. C. W. Leghorns

Exhibited at Boston, 1916, winning 2nd pen, 4th cock, 3rd and 4th hen. Other show winnings shown in mating list.

White Wyandottes

At Massachusetts State Meet, 3rd cock in one of best classes ever shown. Other winnings in mating list.

Profit

S. C. R. I. Reds

No show birds, just egg machines. At Essex Co. Egg Contest, now on, they hold 2d place with big margin.

YOUR WANTS in STOCK, EGGS or CHICKS will receive our prompt attention. Write for mating list, for our low prices will gratify you.

are hardy and prove to be vigorous and rapid growers, a fact pleasant alike to fanciers and to market poultrymen. They make quick developing excellent broilers and are finding great favor for use as Capons. The cockerels make splendid roasting chickens at all ages, and in an experiment conducted this year made more and quicker development in 5½ months than did the Barred Rocks and White Wyandottes in the same flock. This is quite a feature of the breed and one worthy of consideration, especially to the market poultryman, with whom a few days or weeks earlier development means in many cases higher prices and in all cases less cost of production—profitable either way.

The Standard weights set for this variety are from 5½ to 7½ pounds for females, 6 to 8½ pounds for males, and that they easily and often exceed these weights without special feeding is not an exaggeration. The pullets lay early and produce a large number of rich brown eggs, the kind most esteemed by housewives and good cooks.

It is hardly necessary to describe the beautiful Brahma markings of this variety. Everyone is familiar with silvery hackles striped with glossy greenish black. The black tails, finely edged black coverts in both sexes, black flights and slight black striping in the saddles of the males. Balance of plumage: breast, fluff; back and surface of wings, silvery white, which, combined with their bright red single combs, wattles, lobes and faces and rich yellow legs, makes them attractive to fanciers or laymen, either singly or in flocks.

The recent establishment of a world's record by "Columbia Queen," a hen of this variety, which produced under a certified trapnest record 286 eggs in one year, has created a great demand for fowls of this variety by those who are seeking a beautiful as well as a useful and profitable fowl.

The recent establishment of a new world's egg record by the White Leghorn hen "Lady Eglantine" appears for a moment to dwarf the performance of "Columbia Queen". But a second thought and calculation of the eggs laid by each in the course of a year sold at the average price of 30c per dozen (which is high estimate) shows Lady Eglantine's 314 eggs worth \$7.85, while Columbia Queen's product, 286 eggs, are worth \$7.15, a difference of 70c in favor of the Leghorn, but—and consider this well—Lady Eglantine's carcass, weighing 2¾ pounds, is worth just 68c dressed, while Columbia Queen's 7½ pounds will bring \$1.87½, a difference of about \$1.20 in favor of Columbia Queen, and by subtracting the 70c edge on eggs possessed by the Leg-

Memphis Tri-State Show, 1914-356 in class, won 2, 3 Cock; 1, 2 Hen; 4 Cockerel; 1, 2, 3 Pullet; 3, 5 Pen; Best Display. Again in 1915, 215 in class, won more prizes than any other breeder in class, and Best Display.

A little BABY CHICK history: One customer got 600 Chicks April 10, 1915. Raised 225 pullets. Weight at 5 mos. 10 days, 3 lbs. to 3½ lbs. Egg-yield in October, 30%; in November more than 40%. Repeat order for 700 chicks to be shipped April 1, 1916. Another customer got 75 chicks. Raised 41 pullets. "They beat anything laying I ever saw. Frequently this winter got 36 eggs a day, several times 38, and even 40. Bought some higher priced stock elsewhere, but did not have near the success I got from yours." horn you still have a total 50c profit in favor of the Columbian Rock.

Their fine laying, vigor, rapid growth and early maturity makes the Columbian Rocks the leading candidate for popular favor with those desiring beauty and utility combined, while market men are bound to consider the fine flesh and appearance of this breed as a table fowl.

Columbian Rocks have given excellent results, both in large free range flocks, where they prove to be good foragers, and on the other hand have done equally as well in limited quarters. They are interesting to breed for Standard markings and appear to fit into any poultry scheme, whether for fancy, market or for eggs.

COLUMBIAN PLYMOUTH ROCKS.

Setting Forth Their Unusual Utility Value and Their Undisputed Attractive Appearance.

By T. J. ENSLIN, Hackettstown, N. J.

MANY poultrymen realize what has taken place in the poultry world in recent years but very few people who keep poultry solely for home consumption have any idea as to the progress made in putting the thorobred fowl where it is today.

It is not my purpose to go into detail as to the many changes made in the Standard of Perfection, the market requisites as to eggs, broilers, roasters, etc., but I do wish to call the readers' attention to the fact that the value of the general purpose fowl of today is enhanced to the extent of its qualifications when judged according to the Standard requirements, just as a show bird's value is enhanced to the extent of its usefulness as a meat or egg producer.

The vast majority of farmers in particular are ignorant of what is going on and do not realize the possibilities in this connection—while many poultrymen lay very little stress on the combination of the two forms of valuation. Personally, I am firmly of the opinion that the day has passed when any breed can hold and continue to maintain a popularity on fancy feathers alone as its chief attribute.

The merits of a breed can be determined in several ways. One is to watch closely the success of poultrymen breeding them, and another way is to try them out yourself. The breed to be taken up by a beginner, or the one to be substituted for a breed not answering requirements, are perplexing questions. The beginner invariably feels that he is up against a very hard proposition, while the experienced poultryman often finds it difficult to change from one breed to another, fearing he may make a mistake. One may attend all the large poultry shows year after year in an effort to satisfy himself as to the particular type and color which must appear in his newly constructed poultry

1916

Also Boston, 1916

Also winners of champion challenge cup at Boston. Some win, you will say, but consider this was the only bird we entered at the "Garden" and the competition was the keenest it has been in years. The same is true of Boston. He is the only cock bird we entered and with 23 entries, he captured 1st.

If you write promptly, we can supply you with a limited number of his progeny for immediate delivery. Now booking egg orders. Satisfaction or money back is the way we do business.

ROCK LEDGE FARM
SOUTHBOROUGH - MASS.

When Better Birds Are Bred - We Will Breed Them

houses and yards, or he may look over the various egg-laying contest figures with a view to selecting the best egg-producing variety, and in the end may be as much in doubt as when he first gave it a thought. I am firmly of the belief that the selection of a breed of chickens should be treated in the same manner as selecting any article for business purposes and in so doing we must place every confidence and reliance in some responsible poultryman.

My experience with Columbian Rocks dates back many years. Like others I tried out several breeds before becoming convinced that Columbian Rocks possess every element conducive to high egg production and table fowl qualifications. It is a simple matter to obtain one or the other qualification, as many breeds possess them, but quite different to secure maximum results in both. There is an abundance of evidence to corroborate my statement, viz: that Columbian Rocks cannot be excelled as egg producers and as table fowl.

Originating as they do from a White Plymouth Rock-Light Brahma cross, they possess an abundance of vigor and vitality. Good layers and healthy birds cannot emanate from birds deficient in vigor and vitality. They are a big bodied, yellow skinned fowl and lay a large light brown egg. No fowl takes on flesh more quickly. It is a common occurrence to have cockerels weigh five pounds at five months of age and eight to nine pounds at seven months of age, and when caponized will weigh considerably more. Pullets, like cockerels, mature quickly and very often begin laying at five and one-half months. Their strongest point is Winter eggs. They are not large eaters, and on account of their strong constitution require no special housing during Winter months as do many other breeds; and finally they make excellent mothers.

Nothing gives me more pleasure than to say there never has been a "Boom" on, so to speak, with Columbian Rocks to make them undeservedly popular. Many new breeds not having the proper kind of stuff back of them have been forced upon the public by certain wealthy enthusiasts, and after a period of actual tests, a reaction would take place with result that they would cease to be in favor with those who look for profitable results. Not so with Columbian Rocks. Their wonderful growth in popularity, now manifested in almost all sections of the country, has been natural, steady and consistent. Evidence of their qualities is sustained by the fact that once they enter the yards of a poultryman—they generally stick.

As an example of a combination egg-producing and exhibition specimen I call your attention to the North American Egg Laying Contest ending November 1st, 1914, where the wonderful hen, "Columbian Queen," a thorobred Columbian Plymouth Rock, broke the world's record, formerly held by a Leghorn, by laying 286 eggs in one year, which record has never been equaled by any heavy laying breed fowl at any of the authenticated egg laying contests. The hen referred to was on exhibition at Madison Square Garden this year. She has excellent Rock type and for a hen of her age has fine color markings. In her pullet year she undoubtedly would have been qualified and competent to win at almost any of the large shows. Results were accomplished notwithstanding the fact that many poultrymen, breeding for

SUCCESSFUL EGG FARMING

200 Eggs A Year Per Hen

How to Get Them

The eighth edition of the book "200 Eggs a Year Per Hen," is now ready. Revised, enlarged, and in part re-written; 96 pages. Containing among other things the method of feeding by which Mr. S. D. Fox of Wolfboro, N. H., won the prize of \$100 in gold offered by the manufacturers of a well-known condition powder for best egg record during the winter months. Simple as a, b, c, —and yet we guarantee it to start hens to laying earlier and to induce them to lay more eggs than any other method under the sun. The book also contains a recipe for egg food and tonic used by Mr. Fox, which brought him in one winter day 68 eggs from 72 hens; and for five days in succession from the same flock 64 eggs a day. Mr. E. F. Chamberlain, of Wolfboro, N. H., says: "By following the methods outlined in your book I obtained 1,496 eggs from 91 R. I. Reds in the month of January." From 14 pullets picked at random out of a farmer's flock the author got 2,999 eggs in one year—an average of over 214 eggs apiece. It has been my ambition in writing "200 Eggs a Year Per Hen" to make it the standard book on egg production and profits in poultry. Tells all there is to know, and tells it in a plain, common-sense way.

Price 50 cents; or with a year's subscription to **AMERICAN POULTRY ADVOCATE**, both for 75 cents; two-year's subscription and book for \$1.00, or given free as a premium for two yearly subscriptions at 50 cents each.

FRED A. RUF Crown Point, Ind.

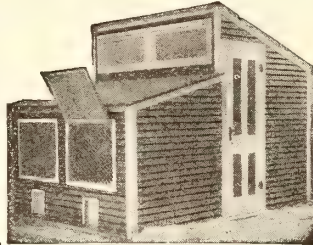

BUILT FOR THE COMFORT OF YOUR FOWLS

Our poultry houses are built—not machine made, that fall apart after a year's use. We use the best lumber obtainable, buy in car load lots, and for that reason we can sell you a house already built, considerably cheaper than you can make one.

FOWLS are LIKE HUMANS

If you spend the night in a poor bed you can't do as good work next day. If you have your fowls in a make-shift house, they cannot keep in condition for either laying or showing. House your birds properly and you will find the egg yield increasing and your birds looking much better. Proper housing means the "Perfection Way." Write for our catalog, it is free.

fancy feathers alone, reluctantly give a thoroughbred fowl credit for having made an extraordinary egg record.

In breeding Columbian Rocks, double mating is not necessary, as is the case with a number of other breeds. In mating up, the same principles apply as to Light Brahmas and Columbian Wyandottes, as color markings are the same. In color points, discrimination should be used and surface color favored over under-color and hidden parts. Too much attention cannot be paid to hackle feathers. The web, or edge of feather should be a distinct white, with solid black stripe extending from fluff down middle of feather. It is much better to have base of hackle feather (near skin) a bluish slate for about one-third the length of feather, rather than black. Black in this section of feather almost always carries with it a smutty colored bird. Hackle should be full and meet in front. The white edging on tail coverts should be narrow and distinct. Both hackle and tail feathers should always be given preference over primaries and secondaries. My experience has been that good hackle and tail feathers will produce in offspring more good winged birds than can be produced by individuals having strong wing and only fairly good hackle and tail. Striping in saddle feathers of male is very essential, altho I am inclined to think that some breeders are laying too much stress on heavy striping. Also carrying the striping too great a distance from tail proper. It is a well-known fact that when all the saddle feathers are striped, a perfectly natural condition exists in other parts of the specimen, viz: dark surface color in fluff and black feathers in breast just below and between front of hackle. This condition affects seriously the beauty of the bird, and if overdone will tend to make Columbian Rocks lose their popularity.

Furthermore the Standard calls for white surface color in fluff and breast. A certain amount of well defined saddle striping, say one-half or two-thirds of saddle is sufficient and adds to the bird's appearance.

A very important factor in breeding is under color, viz: "Bluish Slate" for all parts of body except breast where under color should be "Bluish White." Strong under color invariably signifies strong surface color. The male bird should always have well defined color markings as his color is the preponderating influence on color of offspring, just as the female influences the type of offspring. I wish to emphasize, however, that it is a serious mistake to mate up a male bird (especially cock bird) having very dark surface color in fluff. The result will invariably be dark smutty colored offspring. My best results have been with birds having good under color yet white surface color in fluff. Birds with white under color invariably breed too light in hackle and tail.

In concluding I wish to say that I cannot conceive of anything more beautiful than the Columbian color markings which, to my idea, shows up to the best advantage in the Rock type.

With the egg producing and table fowl qualifications which Columbian Rocks possess, combined with beautiful markings, I see no reason why they should not in very near future become the most popular of all breeds.

A pound of crushed oyster shells is said to contain sufficient lime for the shells of seven dozen eggs.

Trap-Nested Reds

R. & S. C.—Come here if you want birds that are BRED for EGG PRODUCTION

Record 223 Eggs

Eggs from trapnested, heavy laying stock, mated to choice pedigreed cockerels at \$2.50 per setting. From those with trap-nest records of better than 200, \$4 to \$5, according to color. Strongly fertile eggs. Square, decent treatment that has satisfied our many customers. Send for Mating List at once.

Route 12 Goshen, Indiana

TWENTY LESSONS ON POULTRY.

TIMES and conditions are rapidly changing. This well applies to almost anything one might suggest. Years ago, the principal subjects taught in our public schools were reading, spelling, writing, arithmetic and the history of the United States.

A popular demand along various lines has brought about many changes that have received favorable comment and are now considered a real part of school study. It is within a comparatively short length of time that the kindergarten, manual training, domestic science and the study of agriculture in its broadest sense have been recognized in this manner. It goes without saying that all fair minded people will agree that these new studies brought forth in our public schools have been, and are, a great success from every standpoint.

It is earnestly desired by the American Poultry Association and all others interested in the best in standard bred poultry, to have it heralded far and wide that the new text-book "Twenty Lessons on Poultry" is now ready for distribution. It is very complete in every detail and compiled in a manner to prove most instructive and easily understood. It has been written and edited by men especially capable and well versed along the line of poultry culture. It contains 92 pages, with 55 illustrations in the text; published by J. B. Lippencott Co., Philadelphia, and is sold at 50c per copy.

We desire at this time to emphasize the fact that every man, woman and child interested in promoting the study of poultry in our public schools, may do and should do their share in bringing conditions about whereby compulsory laws may be enacted in every state, demanding a certain amount of time be given each week in all our public schools, to the study of poultry culture in its every phase. Believe this is of greatest importance, especially in the rural and suburban districts. If the many interested in all parts of the country would give this subject real thought and consideration and in turn merge thoughts into real action, great good may be accomplished with gratifying results as the answer.

We believe all local poultry associations everywhere should take action in this regard in bringing this matter to the immediate attention of their local school boards.

Editor American Poultry Journal,
Chicago, Ill.

Dear Sir:

Have just received the first copies of trial subscription, and am amazed and delighted with the improvement that has been made in the Journal since I used to take it a number of years ago. The photos of prize winners at the big shows are worth the price alone. They are a positive education to a breeder who is unable to attend. I have started a "scrap-book" of the pictures of my variety. Keep up the good work.

Some of the other papers that can only spare space for "winnings of our advertisers" use up 20 or 30 pages of fine print in knocking—knocking—knocking at others. They have made me so tired that I often throw my copies away without opening them.

Hope I have not been too lengthy in my remarks, but I am so pleased at finding a journal that is really worth while that I could not help writing to tell you about it.

Yours truly,
Clifford Hartman.

Mark your profitable chickens with

Then you can easily discard your unproductive stock and secure maximum profits.

Key-Ring-O's are simple, efficient, economical, very light, last a lifetime; put on like a key ring but easier, and stay on till removed. A trial will convince you of their superiority.

Buy These Eggs and Hatch Them on Your Own Place. Hatch the Chickens and Win Poultry Success.

Don't Waste Your Money on Baby Chicks

You are almost sure to be disappointed in the outcome if you do, both in number and in the QUALITY of the birds you do succeed in raising. It has recently been discovered that many of the large and widely advertised Baby Chick Hatcheries buy the eggs they hatch the chicks from at 20c to 25c per dozen

from farmers' flocks. Also, the hardships through which these poor innocents must pass in shipping is almost sure to injure them so they can never mature into serviceable breeding birds. We repeat,

Buy Shoemaker Farm Eggs
from our high class flocks and hatch the chicks on your own farm. Order today, right from this advertisement.

SEND FOR OUR 1916 BOOK OF POULTRY

It is not like an ordinary catalog, but a big 200-page text book on poultry breeding in all its branches; no other breeder in the country issues one like it. It tells you all about our wonderful birds, giving you prices on them; all about our Globe incubators, brooders and other appliances, giving the prices on same. It contains a number of color plates of leading varieties of fowls, showing the birds in their natural plumage. It tells you all about poultry ills, how to prevent and cure them, tells you what and how to feed. In fact, it is a book that if interested in poultry you cannot afford to be without. Write for it today, enclosing 15 cents. If you think the information on poultry contained therein is not worth the money, we will cheerfully refund same.

Keep Them in Condition!

To get a maximum egg yield next fall and winter your birds must be kept in the pink of condition from hatching to maturity. It has been proven that the feeding of Mustard to poultry promotes an increased egg production, and is also permanently beneficial to their health, vigor and stamina. **French's Poultry Mustard** is the original Poultry Mustard in America, pure and of great strength, hence only a small quantity is required for each fowl. The best results are obtained from its continuous use. Prepare your birds now for more eggs next winter. Booklet free.

EGGS FOR HATCHING

M. L. Starks Dept. A Starks, Wis.

LAKENVELDERS.

AS THEIR name implies, Lakenvelders are a Dutch breed of fowl and have been bred extensively in Holland for many years. They are now very popular in Germany, many farms using them exclusively for egg production, as we do the Leghorns in this country. They have also been taken up in England by a number of fanciers who have made great improvement in their color markings.

The German Lakenvelders are some-

what different in color of saddle, they preferring a white or nearly white plumage. The original Dutch and the improved English type with the solid black saddle is in our opinion far more beautiful and easier to attain.

Lakenvelders were first brought to this country about 1903 and immediately were in great demand. The few fanciers who were fortunate enough to have a flock were unable to supply the demand for stock or eggs; in fact at the present time there are few breeders who cannot dispose of their surplus stock at good prices.

They are strikingly beautiful in color and form, and if you can imagine a

stately White Leghorn with a jet black neck saddle and tail you have a fair picture of a Lakenvelder.

They are very active foragers, and where they can have wide range require very little feed, and will equal any other breed for egg production. They lay a white egg and we have had pullets begin laying at five months of age, and

TOWN LOT POULTRY KEEPING

By D. D. Cavanaugh

Contains over seventy illustrations and plans of every device a poultry man needs. Complete instructions for building Colony and Poultry Houses, Automatic Release Doors, Trap Nests, Shipping and Exhibition Coops, Hot Water, Hot Air and Fireless Brooders, Automatic Exercisers and Feeders, Troughs, Water Fountains and many other useful devices; also tells how to Produce Winter Eggs. Compound Your Own Food Rations, Produce Feed at 20 Cents a Bushel, Make a Brooder for 1,000 Chicks at a Cost of \$5, How to Brood Chicks Artificially, How to Mate Fowls for Line Breeding, How to Select the Most Profitable Breeds, How to Prepare Fowls for the Show Room and Cure All Defects. Price, 50 Cents a Copy.

Poultry Common Sense

These copyrighted records are the result of the combined experience of many prominent and successful poultrymen, and they are the simplest and most complete blanks ever devised. Price of "Poultry Common Sense" with records, 50 cents.

Poultry Keeping in a Nutshell

By Henry Trafford

An illustrated book invaluable for beginners, as it covers every phase of the poultry business in a thoro and condensed manner. If followed carefully you start on the road to success. Price, 50 Cents.

Make Your Poultry Pay

It can easily be done by following The Briggs Method, the latest and greatest help for poultry raisers in this new fifth edition of his valuable book, **Profits in Poultry Keeping Solved**, Edgar Briggs tells his wonderful secrets and how he made \$350.00 a Month, from 500 Hens.

Briggs did it—time and again. It was no mere accident. Every hen on his place had to pay 70c a month profit, \$8.40 a year, or off went her head. The Briggs System explains how Briggs did it and how you may do it. The simplicity of the Method is truly amazing. Even a few hens will pay proportionately.

Other subjects the Briggs Method covers are: Poultry silage; raising ninety-five per cent of all chicks hatched, running an incubator, erecting the poultry plant, diagrams, pictures, getting early hatches, raising late hatched chicks, getting a large egg yield every month, breeding, feeding, moulting, duck culture, turkey raising, dry mash for little chicks, formula for lice killer, preventing and curing roup, cholera and other bowel troubles, and numerous other secrets of value. Price, \$1.00.

Every Duck Breeder everywhere, beginner or experienced, should possess a copy of the new and enlarged sixth edition of Rankin's

DUCK CULTURE

By James Rankin

Greatest Duck Book Ever Published
100 Pages and Fully Illustrated

Covers every point in incubating, hatching, breeding, feeding, housing and marketing of every variety. Gives Rankin's famous feed formulas. Question Bureau contains 50 questions and answers. Highly authoritative. Price, 75 Cents.

All About Indian Runner Ducks

Latest, most practical and reliable book published on The World's Greatest Egg Producers.

The author of this valuable book is Mrs. D. O. Teasley, a duck breeder of national reputation, assisted by Mrs. Andrew Brooks, Mrs. U. R. Fishel, Mrs. Geo. E. Simpson and others, all duck raisers of practical experience, who have been very successful.

This book has separate chapters on the American Fawn and White, the English Penciled and the Pure White Runners, giving the relative merits of each.

Partial List of Contents

Origin and history; the three varieties—English Penciled, Fawn and White and White; claims for the Indian Runner; incubation and hatching; brooding; feeding and care; houses and housing; mating; marketing; questions and answers; duck don'ts, and experiences of duck breeders. Price, 75 Cents.

Order these books from American Poultry Journal Publishing Co., 542 So. Dearborn St., Chicago, Ill.

none later than six months if hatched in the Spring.

Like most Mediterranean breeds the chicks grow feathers early and must be fed nourishing feed. We find milk a great help. After they are five or six weeks old they shape up and are exceptionally active.

We are glad to note that most poultry associations are making classes for them, and there are few shows where they are not represented. At the late Madison Square Garden show there were twenty-four specimens in competition besides two large displays.

CHAS. M. SMITH,
Mgr. Wildwood Farms, Sayville, N. Y.

First Season Success.

WHY is it that many beginners are successful during their first season, but do not do as well with their flocks afterward?

In his enthusiasm for the new work with poultry the novice goes about the work with much thoroughness and care for detail. He starts with everything new, clean and fresh. He keeps things clean, he feeds wholesome food, he does not allow food to remain before the fowls or chicks in such a manner that it will spoil before eaten, and he is careful to keep his pets free from lice and mites.

Becoming more familiar with the work, he finds that the routine is not quite so much "fun" as it was, the work now becoming commonplace must be done everyday, begins to look to him like an exacting form of drudgery that keeps him away from occupations possessing more novelty. He grows careless, the coops and equipment are less clean, the sitting hens get less care or the incubator is neglected,—same too with the layers, breeders, and growing chicks. He may assume that because his success at first was so apparent that the work is "easy"—"nothing to raising chickens"—and he becomes slipshod or inclined to let the little but necessary details "slide" and to neglect essentials that were so interesting when new. Every beginner, sooner or later—and generally sooner—reaches a "know-it-all stage" and right there his downfall is likely to begin. No man has yet lived long enough to learn what there is to learn about poultry,—much less to "know it all." Something new and interesting can be learned every day. To those who will study, work, and apply themselves, the newness and interest will never wear off. When you begin to get too cock-sure of your knowledge of poultry, it is a pretty good time to "stop, look and listen" and remember that a "swelled head" and overmuch pride is pretty certain to precede a bad tumble. A veteran sometimes knows that there are some details that he can "let slide" and "get away with it," but such a course is never safe for the beginner.

Start with things clean and in good order and keep them that way. Move the flocks to new ground now and then or keep the soil sweet by frequent cultivation. Be always "on the job."

Importer and Breeder

Practical Pointers in Raising Fancy Fowls

Certain Qualities Essential in the Man as Well as the Birds. Fundamental Facts as Proven by Twenty Years' Experience.

By Judge W. W. Henderson

THE all important question to any one embarking in the poultry business, and especially to a young man is, whether said business can be developed to such an extent that it will pay a sufficient return for the money and labor expended as to justify one making it his vocation in life. After raising poultry for a number of years as a side issue, I have no hesitancy in answering the question in the affirmative.

The next proposition is how to make a success out of the poultry business, and in answering this question, I am going to eliminate from my discussion so-called commercial poultry business, or in other words, raising broilers or producing eggs to sell at market price, but

First prize Barred Rock pullet and champion female, St. Louis, 1912. Owned by W. W. Henderson, Bridgeton, Mo.

rather I wish to discuss what might be termed the fancy end of the game. The first and most important consideration in this, as well as all other business, is the suitability of the man for the business that he intends to follow. One man

may make a successful doctor and another a successful banker, but if the banker had studied medicine and tried to practice, or if the doctor had embarked in the banking business, they both might have been failures, but having selected a business to their liking, and one in which their peculiar talents can be brought to bear, and one in which they are naturally equipped, they have succeeded; so as I said before, a man to go into the poultry business should first determine whether he has an undying affection and interest in chickens; secondly, whether he is naturally a judge of chickens, and thirdly, whether the work incidental to raising chickens would continually be a pleasure to him, notwithstanding it lasted from early morning until late at night, and every day in the year. If he is satisfied on these three points I would say he has the proper qualities to start in the chicken business, and to elucidate a little more fully what I mean by natural judge of chickens, I will illustrate in this way—I once knew a university professor, a man of considerable learning and a neighbor of mine, who wanted to raise some thorobred chickens. Like most beginners, he started with several varieties. He had White Plymouth Rocks, Brown Leghorns and Pit Games. As we all know the Pit Games and Brown Leghorns will fly from one pen to another. He cut the wings of the male birds, but did not wish to mar the females to this extent, as they were quite numerous, and when the Pit Game hens would get into the Brown Leghorn pen, or the Brown Leghorn hens in the Pit Game pens, they were so near alike that our distinguished professor could not tell one from the other. Upon various occasions I would go to his chicken yards and separate his chickens, putting the right hens with the right male birds. A few days after one of such visits, he requested me to come and see his birds again—I went over to his poultry yards and found shingles tied on the backs of all of the Pit Game and Brown Leghorn hens. This presented such a comical sight that after I quit laughing and gained my equilibrium, I asked him what in the world he meant by that. He told me that his idea was that when the hen

CANDEE COLONY BROODERS

CAST IRON COAL BURNING-SELF REGULATING

Cold Maine to Sunny Alabama

"I raised all of my 180 chicks that I put with my brooder 6 weeks ago. The birds are very healthy, and are the strongest and largest for their age that I ever raised during my 12 years' experience, which shows that they have been properly brooded."

C. F. GRANT, Woodford, Me., April 20, 1915.

"We have 4 of the Brooders up and by the 24th will have 2000 chicks in them. It is real hot here now but they do the work fine."

A. C. MONELL, Mgr., ALABAMA LEGHORN FARMS CO.,

Mulga, Alabama, May 20, 1915.

Why Candee Is Successful Everywhere

The Candee burns coal and furnishes a healthy heat with no oil fumes or gases. Heat regulated automatically, giving a constant, correct temperature without attention. Certain stops the draughts—prevents chilling of the chicks and protects the thermostat from air currents that would upset the regulation. Curtain also gives the chicks a big warm space under the hover for resting and sleeping and a room not too warm for exercising, which makes the chicks grow big and healthy.

Write today for large handsomely illustrated Colony Brooder Catalog that tells more about the Candee and contains many more letters like the above from all sections.

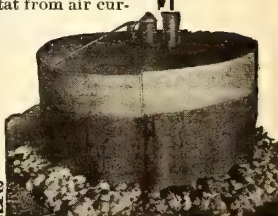

CANDEE INCUBATOR & BROODER CO., Dept. 2, Eastwood, N. Y.

Licensed by W. A. Schleit Mfg. Co., Inc.

Burns Coal

Broods up to 500 in one Flock

raised her wing in flying, she would strike the shingle and not be able to fly over the fence. It is needless to say that his plan had so many other objections that it was not practical, and that a man who had so little natural conception of a chicken, that could not tell one from the other, or could not educate himself to tell one from the other, did not make a success in his poultry venture, notwithstanding he was a professor in a State University of considerable reputation.

My first suggestion towards success is that any of the well known Standard breeds be selected. My preference, naturally, leans to the Barred Plymouth Rock, as I have been a breeder of that variety for many years and have seen the popularity of other varieties come and go, but like Tennyson's brook, the popularity of the Barred Plymouth Rock "goes on forever." It has been, is, and I venture my reputation, always will be the most popular breed of fowls in America, and as the American people

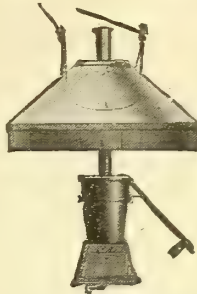

First prize White Plymouth Rock cockerel Iowa State Show, 1915. Also headed second old pen Illinois State Show, 1916. Owned by S. A. Tyler, Lincoln Highway, De Kalb, Ill.

are quick to detect merit, so they are equally quick to discard a worthless thing. I venture that the popularity of the Barred Plymouth Rock is based upon a foundation of merit, that will make it continue to be the leading fowl for all time to come; and in saying this I wish to warn the breeders of this variety and the poultry judges as well, against a seeming tendency to pay too much attention (possibly) to the coloring of the bird and too great an inclination to breed a bird that is short in leg, short in back and more of a Wyandotte type. The Barred Rock that has made the breed popular has been rather a rangy bird with big thigh, legs wide apart and the ideal chicken for the farm, for after all breeders may continue to sell to one another, but the primary demand must come from the farmer and from the chicken raiser who is raising birds for the meat and for the eggs that they will produce.

In taking up Barred Plymouth Rocks, one must appreciate that his competition will be strong, and it is only to the breeder that is willing to compete with the best wherever he goes that can get to the front in Barred Plymouth Rocks.

Another breed that I would recommend to the beginner is the Silver Laced Wyandotte. This is a magnificent fowl

More Dependable Than Mother Hen

The Hall Company marketed the coal heated Colony Brooder years before any other was conceived. The Hall is the original Colony Brooder.

Write for the Big FREE HALL BOOK

The boiled down experience of many users of Hall Equipment. Mention whether you are interested in Brooder or Incubator.

HALL MAMMOTH INCUBATOR COMPANY

107 Southern Avenue, Little Falls, N. Y.

Capacities 1,200 to 20,100 Eggs. The Original and Standard Mammoth.

Successful poultry raisers all over the country will tell you they find that strong, healthy birds, the money makers, are range-raised chicks—raised in the open with a Colony Brooder for a mother. The

HALL COLONY BROODER

is no experiment. It broods up to 500 chicks at one-tenth the labor and cost of any small flock system and with no danger of chilled or gas-poisoned chicks.

Send NOW for the Hall book described below and read what many poultrymen who use the Hall say about it, as well as the

Hall Incubator

Made really sectional so your incubator can expand with your business—and you needn't tear out the cellar door or wall to install the Hall. Sections measure 29"x24"x54" over all, and weigh 75 lbs.—easily handled by one man. The Hall makes it possible for you to start small and grow right.

A postal will do—send it NOW—before you forget it. Tells all the things you have always wanted to know—Sanitation, Maximum Flock Size, Chicks Indoors, Chicks Afield, etc.

BERRY'S QUICK ACTION GRAIN SPROUTER

SPRING CONDITIONS IN WINTER AND FEED TEN CENTS PER BUSHEL MAKE BIG STEADY INCOME

Here is what it will do—Results in a nutshell:

Diminishes cost of feed 50 to 100%

Increases egg production 50 to 100%

Starts pullets to lay early

Fattens poultry 50% cheaper and quicker

Raises baby chicks easier and better

Increases the profits 50 to 100%

"BERRY'S QUICK ACTION" is undoubtedly the leader. Perfected from actual experience and careful tests and comparisons on our practical poultry farm. Made of galvanized rust-proof steel. Indestructible, safe, quick, easy to operate, low in cost. You are Protected by our Absolute Ironclad Guarantee. "BERRY'S QUICK ACTION" will do what we claim or your money back. Sold on the Golden Rule Plan—A SQUARE DEAL TO ALL.

Don't buy a sprouter until you have read all about the "QUICK ACTION." Send today for FREE book on winter eggs and about our wonderful sprouter, incubator, supplies and pure-bred poultry. Address

BURDIN, 66 Tranby Avenue, TORONTO, ONT.

CAPONIZING

and one of the most beautiful of the feathered world when properly bred. There seems to be so few good ones, that if a breeder thru extra perseverance or extra knowledge did breed the Silver Wyandotte to perfection he instantly would jump to the front, and the demand for his stock will probably be greater than he could supply. I am convinced that the above remarks on Silver Laced Wyandottes will arouse the ire and condemnation of many American breeders of this fowl, but when one compares the Silver Wyandotte produced in England with the birds shown in America, one wonders why it is that the American breeder who excels in nearly all other varieties should be so woefully behind in the breeding of this magnificent fowl. I am also inclined to believe that the fault does not all lie with the breeder, but that the poultry judge has been largely responsible for this result. The inclination the past few years of the judge to tie the ribbon on a short legged, short backed, pudgy, jammed in, fluffy little bird, in my judgment, has been to the serious detriment of the Silver Wyandotte. I am happy to note that the last Standard of perfection

has lengthened the back of the Wyandotte, and if the revision committee had also lengthened its legs, I believe it would improve the bird, or if the judges in their awards will cease giving the prizes to the short, duck legged specimens, it would be to the benefit of the breed. There are many other splendid varieties, such as the White Plymouth Rock, Rhode Island Reds, Orpingtons, the Leghorns, Cochins and Brahmas, in fact success or failure does not depend so much upon the breed selected as upon the man breeding them.

The next proposition is how to begin. I would recommend that for the first year or two one continues in his present occupation, and raise as many birds of the selected variety as he can, as a side line, that he studies the variety upon all occasions, that he spends as much time with his chickens as possible, that he writes to the Experiment Stations and keeps up with all modern plans for feeding and developing, that he attends every poultry show possible for him to visit, that he studies his neighbors' chickens of the same variety, that he experiments with the different incubators and brooders, in fact that he works with

his chickens until he has acquired a thoro knowledge of the variety that he is breeding, a thoro idea of how to mate them for results, a thoro knowledge of how to raise chickens, a thoro knowledge of how to condition them for a show, and a thoro knowledge of how to select the best from the poorer specimens, in fact until he has a thoro knowledge of the business that he contemplates embarking in. After he has acquired this knowledge, and if he finds he still has the same affection for the feathered fowls that he had in the beginning, if he finds that he has not been discouraged by mistakes and disappointments, and if he has raised a goodly number of good birds, he is then in a position to start out to make the raising of the variety of chickens selected as his life work. He should also have some money to start with. The failure of most people who embark in the chicken business is due to the fact that they expect the hen to support herself, to support the family, pay off the mortgage on the place, and to furnish money to build up a bank account, without giving her sufficient time to do it. You cannot start in the hen business today and expect to

Here is Your Chance to Save Money

Read This Letter from San Jose, California

Simplex Supply House, Pontiac Building, Chicago, Ill.

Gentlemen:—The Simplex "Faultless" Poultry Feeder ordered from you some time ago has given entire satisfaction and is indeed "faultless" in every particular in our opinion, as is expressed by the enclosed

order for eight more, together with order for twelve Grit Boxes and one-half dozen Dry Mash Feeders, all of which have been tested out to our entire satisfaction.

Thanking you for past courtesies, promptness and square-dealing, I remain,

Yours very truly,
S. N. GOLDY.

130	20-qt.	2.50	2.00

We Sell Direct from
Factory to Consumer

Save 20% to 33 1/3%
By Buying Your Poultry
Appliances from Us

We specialize in the manufacture of automatic feeders, which save more time and more feed than any other appliance in the poultry yard. No well equipped poultry farm is seen today where automatic feeders are not used. On large farms they save the wages of at least one man. For small flocks they can not be excelled. Filling the feeder once a week is a good deal less work than feeding several times a day. There will be no grain lying around on the ground, no loss from pilfering birds, rats and mice. No staying at home simply to feed the chickens.

In addition to cutting down the feed bills, automatic feeders increase the egg production of the hens. They will be in laying condition at all times, as these feeders give them the proper exercise and they digest every bit of grain they eat.

Be up-to-date and increase the profit from these fowls at least 25% by the use of automatic feeders. Made in styles and sizes shown hereon. We guarantee they give absolute satisfaction. If they do not, we refund the money. That's the guarantee under which we sell all our products—direct to the consumer at wholesale prices.

Simplex Supply House
Pontiac Building Chicago, Illinois

REMEMBER—Your money is refunded promptly if you are not satisfied.

**For Greatest Satisfaction Use
DOUBLE SERVICE
Automobile Tires
Guaranteed 7,000 Miles Service
Absolutely Punctureproof**

Double Service Tires are made double the thickness of the best standard make tires.

This 100% greater wearing surface naturally gives them much more mileage and service. The average of 12 miles of tough

fabric and one inch surface tread rubber makes these tires absolutely punctureproof.

These tires excel all others for use in the country over rough and rugged roads as well as on hard pavements. They are as easy riding and resilient as any other pneumatic tire—the air space and pressure being the same.

They are the most economical and "care free" tires made and are used where tires must be depended on and tire troubles cannot be tolerated. Many Double Service style tires are in use in the U. S. government and European War service. Our output is limited to a certain amount, but for a short time we offer the following reduced special prices as an introductory offer:

PRICES

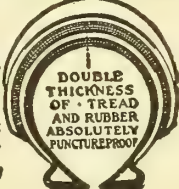

Tires Tubes		Tires Tubes	
30x3 in.	\$8.60 \$2.30	36x4 in.	\$17.45 \$4.65
30x3 1/2 in.	10.85 3.10	36x4 1/2 in.	21.20 5.60
32x3 1/2 in.	12.75 3.20	38x4 1/2 in.	22.60 5.75
33x4 in.	15.75 4.20	38x5 in.	23.60 6.20
34x4 in.	16.70 4.35	38x5 1/2 in.	26.30 6.60

All other sizes not included in above list also furnished. Non-skids at 10% additional.

Terms: Payment with order at above special prices, a 10% discount allowed on orders for two or more tires. All personal checks must be certified.

Try these tires now and be convinced of their very high qualities. Sold direct to the consumer only. Descriptive folder upon request. Write for it.

rake in the shekels tomorrow, any more than you can start in any other business without capital, and expect to get returns immediately. I believe that the same amount of capital invested in the poultry business will bring as quick returns and as much returns, if intelligently invested as in any other business. Do not expect to strike natural gas or an oil gusher and become wealthy at once, in the hen business. On the other hand, I wish to emphasize, that if you are willing to abide your time, and work faithfully and intelligently, your success is absolutely sure, and your reward will come in due course. If you have a reasonable amount of money to begin with, and have made up your mind to make the raising of fancy poultry your life work, buy yourself a well located piece of ground of about five acres or more, in accordance with your purse, study seriously the kind of houses you wish to build, waste no money on fancy decorations, but construct all houses well, and under all circumstances would suggest that your permanent buildings should be placed on concrete foundations. My personal belief is that dirt floor is superior to any other kind. I am equally as confident that concrete foundations, while a little more expensive in the beginning, are far much cheaper in the long run. Determine the kind of incubators and brooders that you wish to use, buy what you need of the very best, but do not over-buy, wait until you need an article, or will shortly need it, before purchasing, as many thousands of dollars are often thrown away by poultrymen by buying useless chicken paraphernalia. Feed as cheaply and scientifically as you can. Living near St. Louis as I do, I find a most excellent feed is bakers' stale bread, which can be purchased cheaply, mixed with bran, shorts and alfalfa. I also find that I can purchase cabbage by the ton during the winter at a reasonable figure. I believe there is no green food equal to cabbage.

In the above I have merely touched upon a few of the salient points to be considered in producing your chickens.

The next question that arises is, after you have produced an excellent quality of the variety of fowl that you are raising. How can you sell them? My first suggestion is that you exhibit your birds at as many of the leading shows as possible. Do not be afraid to go up against the other fellow, for he has had his troubles as well as you. Remember that the perfect bird has never yet been raised, and it may be that the fowls that you have in your yard are as near perfection as has been produced. If the judges determine that you have good birds, and have awarded you your share of the ribbons, advertise your winnings and what you have to sell, in any of the good poultry papers that are being published. Do not feel that you have to confine your advertising entirely to your home paper, as a demand for your fowls can be created in all states in the Union by the message carried in your advertisement in the poultry press, and you will frequently find many of your best customers a long ways from home. In fact, there seems to be something in the human mind that makes one feel that if they have to send a long way for an article, it must necessarily be better than one purchased near home. In your advertisement tell a straightforward story of the facts; by gross exaggerations, by hip-hip-hurrahs, you may temporarily gain some advantage, but I am con-

MRS. TELA E. WATTS WEST CONCORD, MINNESOTA

strained to believe that the breeder who continuously succeeds must not grossly misrepresent or exaggerate his article for sale. Remember the admonition of the late Abraham Lincoln: "You cannot fool all of the people all of the time." On the other hand, one with propriety should state his message in his advertisement in a clear, concise manner. It should be convincing, it should be attractive, and it should be so written, that the prospective buyer will be drawn to it in such a way that he will answer same. Another matter frequently considered, is whether it is better to place a small advertisement in many papers or to select those that you consider the best and concentrate your advertisements in such periodicals. My personal judgment is, that the latter plan is preferable. In this way you can take a sufficient space to attract attention in itself, and as many of the leading breeders are subscribers to most all poultry papers, your advertisement in such a journal will be seen by nearly all breeders. By taking a small space in many papers, it is frequently overlooked, it does not attract attention, and frequently the territory overlaps.

In conclusion, deal fair with your customer, send him his money's worth, for this most always assures you of repeat orders, and in saying this let your own conscience be your judge. Do not let the first complaint that you receive dishearten or discourage you, often the buyer does not fully appreciate the quality of the bird sent. Try and find out before filling your orders the kind of bird that the purchaser wants. All breeders have a specific hobby. Some see nothing but the head, others under color, others shape, others color of legs

and beak, or possibly the eye. If you should send a bird to a breeder whose hobby was the comb, the bird being excellent in every other particular yet poor

First prize White Wyandotte hen and also winner of special at National White Wyandotte Club meet at Buffalo, N. Y., November, 1915. Owned and exhibited by Fernbrook Farm, Menands Road, Albany, N. Y.

in comb, the customer would be dissatisfied. You should have sent the same buyer a much inferior bird but with a splendid comb, and he would be satisfied. Try and ascertain from the

correspondence exactly what the purchaser wishes before filling the order.

I have no hesitancy in saying that any one embarking in the poultry business, who will follow out the above suggestions, will succeed nicely. In fact not only a good living can be made, but a handsome revenue can be derived from the poultry business. I have been a breeder of Barred Plymouth Rocks for the last twenty years, have never devoted my entire attention to it, but have seen it grow from one small chicken house of 16x10 dimensions, until I now believe I have one of the largest Barred Rock farms in America. I have seen my business grow from the production of sufficient eggs to supply my own table until now my sales amount to many thousand dollars' worth per year. I have seen it grow from a few meagre sales around home, and at our local poultry show, until I am now shipping birds and eggs to nearly every state in the United States, also to Canada, and have shipped a large consignment as far south as Brazil, South America. Seeing all this convinces me that it is a business worthy of the attention, thought, and occupation of any man. It is no easy road to success. It requires the same intelligence and effort as any other business does. I have tried banking and I have tried the poultry business, and I can assure you that to succeed in the poultry business requires as high a degree of intelligence, as much effort and as much care as the banking business. I am also equally sure that the same degree of effort, intelligent continuity of purpose, of thought and hard work is surer to bring success in the poultry business than in the banking or most any other business.

THIS MEANS MUCH TO YOU

- 1st They mean that you will receive eggs from the best quality pens in AMERICA. Pens that have been carefully mated by Maurice F. Delano, who has had over twenty-five years experience in breeding thoroughbred poultry, and by Frank H. Davey, who has had forty years of such experience.
- 2nd They mean that your eggs will come from the best and most careful line-bred flocks in all the WORLD in my varieties. Flocks that year after year have gone serenely on producing the best specimens for the best shows in the United States, Canada and various Foreign Countries.
768 OWEN FARMS BIRDS HAVE BEEN PLACED AMONG THE WINNERS AT MADISON SQUARE GARDEN, NEW YORK, AND 393 OF THESE BIRDS HAVE WON FIRST PRIZES SO FAR AS COMPETITION FROM OTHER BREEDERS IS CONCERNED.
NO SIMILAR RECORD HAS BEEN MADE BY THE BIRDS OF ANY OTHER BREEDER IN ALL THE WORLD.
- 3rd They mean that for a very moderate expenditure you can share with me the results of years of careful breeding and of thousands and thousands of dollars spent for foundation birds to help make the SUPREMACY OF OWEN FARMS FLOCKS. Every one of my best matings is carefully described in my 1916 Mating List. I HAVE NO RESERVE MATINGS. Every egg is marked with the pen number and breed initials when it is picked up. EGGS FROM ALL MY BEST MATINGS AS THEY RUN ARE:

\$10.00 for 15. \$19.00 for 30. \$30.00 for 50. \$50.00 for 100.

- 4th They mean that for a still more moderate expenditure you can secure splendid results and share in my careful line-breeding if you buy eggs from my splendid second quality matings. These matings have been made with the same care and thought that I have spent on my best pens. The males are extremely fine. They comprise my star reserve males that I carry to use in case of accident to my regular pen headers and the cream of my males that I am carrying over to make prize winning cock birds. The females are all good and carefully selected as to blood lines and individual quality to mate with each male. These matings will produce better results than the best pens of most breeders and the price is only

\$5.00 for 15. \$15.00 for 50. \$25.00 for 100.

The American Poultry Association and Horace Greeley's Pig.

AS THE story goes, Horace Greeley got interested in farming and bought a good lusty shoat and was much interested in seeing it grow, and in feeding and caring for him. When he had killed and marketed the pig the following fall, he was asked how he came out in his

venture. He replied: "I have made heavily on pork, but have lost like the devil on corn."

The great American Poultry Association, formed to improve and sustain the best interests of poultry culture, seems to have fattened at a huge cost. It is making heavily on political she-nan-agen, but is losing like the devil on real merit. Political hogs make mighty poor pork.

Said the "Bald-headed Eagle of the A. P. A."

"Listen, ye members, and I'll show ye the way
How I catch the "Huckster" and little "String man,"
And to have my own way, I'll show you I can."

"The poultry business was made to catch suckers,
And squeeze dollars out of bone-headed muckers,
And if you'll but listen to what I say
We'll run the A. P. A. in just My way."

I am the great I AM, spelt big,
Tho the A. P. A. may lose like the H. Greeley Pig:
We'll kill off these little duffers today
Then my hot-air artists will have full sway."

"Hip! hip! hurray! they can soar still higher,
If you'll let me prove this duffer a liar,
What does it matter to lose one little man
When things are done by the great I AM!"

If these duffers only knew how to advertise
And would use space of a very large size,
I would boom these few so awfully big
You would soon forget the H. Greeley pig.

But they use in advertising a very small space,
Which counts little for me in this money-mad race,
If they only knew how to spend money on ME
In a sure safe place they always would be."

I would boom them and boom them and take them so high
That the supply of hot-air would become awfully shy,
But they don't do it, and I don't get their cash,
That is the reason why these duffers I'll smash.

LIFE MEMBER A. P. A.

Brooder Chicks.

BEAR in mind that you must have patience and train your brooder chicks on the start, that the little birds are not "fools" just because they don't take care of themselves properly. Hen brooded chicks have a mother to train them, the brooder chicks have to learn their lessons from the attendant. If started right they will generally do right.

Get them into the brooder.—which should be ready, warmed and regulated properly, in the afternoon just in time to have their first feed and then be ready for bed. Tuck them under the hover. If there is much more of daylight, leave a felt tab of the hover pinned up for a door way. Look them over now and then to be sure they do not huddle outside hover; if they cry to be hovered, tuck them under hover to warm up. Be sure that all are safely under hover at dark.

We like to litter the brooder with cut-clover over a thin layer of sand. The chicks are fed on feeding boards or pans. Some of the grain food gets into litter where they soon learn to scratch for it. After a meal, the first few days, the chicks are tucked under hover again. They soon learn where to go to warm up. Then in similar manner they are trained to go to exercise part of brooder and return to hover. By the end of first week they are so well trained that they have learned to take a little run each day outside the brooder on the ground.

OWEN FARMS 1914-15 and 1915-16 RECORD

At Madison Square Garden, New York, The Palace New York Show, Boston, Chicago, New York State Fair and Allentown includes

47 FIRSTS IN 97 CLASSES

All Competitors Combined Won 50 Firsts

This record at the LEADING SHOWS simply proves that my birds are a little finer than ever before and that they absolutely lead all competitors for the 1916 Breeding Season.

At Madison Square Garden Show, New York, 1915

18 out of a possible 27 firsts on Cockerel.

20 out of a possible 32 firsts on Pen.

At MADISON SQUARE GARDEN, NEW YORK, and at BOSTON in 1915-16, I won 7 FIRSTS on BUFF ORPINGTONS and FIRST COLLECTION at each show. At NEW YORK PALACE SHOW in 1915 I won ALL 5 FIRSTS on WHITE ORPINGTONS and FIRST COLLECTION. At BOSTON in 1915 and in 1916 I won FIRST COLLECTION each year on S. C. REDS. At CHICAGO COLISEUM SHOW in 1914 I won ALL 6 FIRSTS and FIRST COLLECTION on WHITE WYANDOTTES. At BOSTON in 1915 I won FIRST, SECOND and THIRD PULLET and in 1916 FIRST and SECOND COCKEREL and FIRST PEN on WHITE LEGHORNS.

Complete winnings are given in my 1916 Mating List and in my new Catalogue. They will help you decide to place your order where you will receive a little more than you pay for.

Questions and Answers

Conducted by
Prince T. Woods, M. D.

Hatching Pullet Eggs.

Q. What is the objection to hatching chicks from eggs laid by pullets that were May hatched? I have read so many people advising against using pullet eggs for hatching.
Jacksonville, Fla.

R. S.

A. The objection to using pullets for breeders is that they are not sufficiently matured to give best results in breeding. In continuous breeding from immature—not fully developed—stock there is a tendency for the stock to “run out,”—for size of young and size of eggs to gradually grow smaller. Fully matured adult birds give the best results as breeding stock, but such breeding birds should be sound, healthy, active, vigorous specimens. A well developed, strong, healthy, vigorous pullet will make a much better breeder than an overfat or worn out hen. There is more permanency in value and quality in stock that is bred from mature adult breeding specimens that are in best breeding conditions. Stock that has been forced for egg yield or other purposes makes poor breeding stock in the long run. Yearlings and

two-year-olds, if well kept, make good breeders because they have had time to ripen and reach full maturity. In some varieties the birds are not really adults until they are two years old. “Laying maturity” and “breeding maturity” are not the same. Human beings become capable of reproduction when twelve to fourteen years old, but where marriages occur at such tender years the results are in a downward direction toward degeneration, and it is conceded that double these ages, or older, yields better results in the progeny of the union. In poultry, some of the best breeding hens we ever saw were well kept four-year-olds that had never been permitted to lay heavily and were well “rested” each season.

To Qualify As “Poultry Manager.”

Q. (1) I am a young man 22 years old and am thinking of taking up poultry culture as a career, or profession, at which to earn my living as I would at any other trade or profession. I am not intending to go in for myself but would expect to be able to make a liv-

ing by working for other poultrymen. I base my preference for this calling on my love for poultry and the country, but I have to make a living. Do you think there will always be a demand for poultry managers or experts?

A. (1) There will, in all probability, always be a demand for poultrymen or poultry managers, but it will take you a long time to qualify and obtain sufficient experience to make you worth your board and a fair wage. There are plenty of poultry managers, of sorts, now out of work and looking for jobs; but really good experienced men are not particularly plenty. However, an intelligent and willing young man of your years should be able to fit himself for work that will make a better career than that of poultry manager. It takes something more than a love of poultry and the country to make a good poultry manager.

Q. (2) About what is the salary of a good poultry manager, also of helpers?

A. (2) There are plenty of young men who will work on poultry farms for their board and experience and some will pay their board for the privilege of working on a plant to gain experience. Helpers on poultry farms can be had for board and lodging up to \$20 per month and found. We get excellent farm help, capable of doing work with poultry and all other farm work, including wood chopping, at \$2 per day, and the mail is full of applications every day. Poultry managers can be had for from \$40 a month up to \$75 and \$100 per month, and from the number of them who are seeking work there must be quite a lot of them now unemployed. Of course, first class help, really experienced and qualified to deliver the goods, is not over plentiful and such usually lands a good job and holds on to it.

Q. (3) Could I become a poultry teacher or investigator?

A. (3) Not one worth his salt, until you have had a number of years of really practical experience.

Q. (4) How and where is a good place to start to learn and study poultry culture?

A. (4) On a good sized practical poultry farm, doing the actual everyday work and getting in touch with all phases of it.

IMPERIAL BUFF WYANDOTTES

Five grand pens headed by Chicago and Indianapolis first prize winners. My mating list describing these pens will be sent free upon request.

W. F. SCHULTZ Box 97 Cuyahoga Falls, O.

Eggs from Strong, Healthy, Vigorous Birds Rhode Island Reds—Light Brahmas

Standard Bred, Utility and Fancy combined. Prodigions, early maturing, winter layers. 16 year's experience. Send for circular. You can't do better.
BUENA VISTA FARM Ball Hill NORTHBORO, MASS.

RED CHIEF STRAIN

Single Comb Rhode Island Reds

A strain of Reds that dominates, as made evident by their wonderful win at the World's Fair, San Francisco, Nov., 1915. Here were found birds from North, East, South and West. We entered 11 birds and nine were in the ribbons. This wonderful win epitomizes their virtues. Just think of it, after traveling that distance, they won

1st Cock 1st and 2nd Pullet 7th Hen 3rd Pen

and gold medal for Champion Pullet, all classes competing. In the cock class there were 29 entries, yet we captured first. You heard about the “hot” Red classes at Madison Square Garden, New York, and Boston, 1916; it was the talk of the country. At the “Garden,” New York, we won 5th pen; at Boston, 4th cockerel, 6th hen.

White Plymouth Rocks

At both the “Garden” and Boston, 1916, the competition in this variety was the strongest it has been in years. OUR GARDEN WIN: 2nd Cock; 2nd Pullet; 5th Cockerel; 3rd Pen. OUR BOSTON WIN: 1st Hen; 2nd and 4th Cock; 5th Cockerel; 3rd Pen.

White Wyandottes

No exhibit at the “Garden.” At Boston we won 2nd cockerel, 5th pen. Now, friend reader, here are the “World's Real Shows” showing just what “Mirimichi Quality” accomplished. It is just a repetition of what “generation to generation” since 1909 has been accomplished by our birds.

YOU WANT stock, eggs or chicks that mean money for you. Therefore don't hesitate, but write for a copy of our catalog and mating list. It is free.

MIRIMICHI POULTRY FARM

Breeders of Birds that Win, Lay and Pay.

W. H. Saart

Box 100, Foxboro, Mass.

Q. (5) Do you think I would be wise to specialize on this one thing, or had I better learn something else on which to fall back in case I cannot make a living in the poultry industry?

A. (5) By all means have "an anchor to windward," learn some good useful trade in which you can become expert and at which you can always find work. You are only in the formative stage yet, you haven't found out what you really want to be, or what you are going to be, and the whole world is before you. Learn and study all you can about everything useful that you come in contact with and before long you will "find yourself." You can't "specialize" without a foundation and a certain aptitude for the work; first learn to make yourself generally useful in whatever work comes to hand and make the most of your opportunities. There is time enough to "specialize" after you find out what you are best fitted to do and to do well.

Q. (6) Is the chance for advancement as good in poultry culture as in other lines of work?

A. (6) We don't think so. There are good opportunities for those fitted for agriculture, including poultry culture; but in the trades, arts and professions there are much greater chances for advancement for an earnest, ambitious, intelligent and hard working young man.

Answer to J. B. Y.—Increasing the Flock.

The query of J. B. Y., of Milan, Mich., in the March issue of AMERICAN POULTRY JOURNAL brings up one of the greatest questions that can come to the small commercial poultryman, when the flock is too large for the wife to do the work and not large enough to support the family, so that the husband can give his entire time to it, then how is one to enlarge?

The method that I shall present is one that has been proven out in several cases that I am acquainted with and if the right man is behind the flock it will work again.

Select from the birds on hand, the very best ten females, and from these select as carefully as possible the one best pullet, put just as much time, work, and study into the selection of this one hen as tho she were actually costing you \$500.

The best flocks of fowls we have today were built up by intelligent selection. Get your best pullet, place her in a pen with your best male; those two birds make up your pen one. Place the other nine good females with your second best male, and they make up pen 2.

The chicks you raise from pen one will give you pullets to go into pen three next year, to be mated to their own sire.

The chicks from pen 2 will give you about one hundred pullets for the laying pen next year, and make up your mind that those birds are going to do two years work, and then see that they do it.

Frank Myers, Mfrs., Box 40, Freeport, Ill.

One Million Day-Old Chicks

shipped in six years and not one dissatisfied customer—that's our record. Thousands of our chicks go to the same old customers year after year. Isn't that proof that our chicks are right? Would people buy them continuously for six years if they were not the very best to be had for the price? Would we receive hundreds of testimonials as to their quality and our superior service if we didn't deliver the goods to their entire satisfaction? Read these few extracts from letters we have received—if you desire names and addresses of these people we will cheerfully supply them. "The chickens I bought of you are busy filling the egg basket." "The eleven pullets I raised from your chicks averaged 145 eggs each last season." "Please send your 1916 prices; the 500 Barred Rocks I bought of you last season did fine." "I had such good success with chicks I received from you last year I did not like to take a chance ordering from any one else." "I got 100 chicks from you last year and had good success." "I am paying you \$100 more for the 4,000 chicks I am ordering from you, but I have had 'Better Hatched' chicks before and know what I will get." "The chicks I bought of you last year are just fine. I got better birds than I did out of \$5.00 and \$10.00 settings of eggs from others." "I have bought S. C. White Leghorn chicks for several years. The last four years I have bought your 'Pay-streak' chicks, they have all the others backed off the map." (This customer bought 3,000 for 1916.) "One of your 'Pay-streak' White Leghorns laid at the age of 116 days." Think of it, less than four months; they get the profit habit early. Another one: "I kept fourteen pullets from the twenty-five White Wyandotte chicks ordered of you last March: one laid her first egg when four months and twenty days old; one at five months and five days, and one at five months and ten days. They laid 206 eggs in November. Money couldn't buy them." This same man sent another in March as follows: "The pullet that laid at 4 months and 27 days is a wonder; on March 8 she laid two eggs in a trapnest." We showed ten White Wyandottes at Shelby, O., in December, 1915, five pullets scored 95½, 95, 95, 95, 94½. Needless to say they got the ribbons, as well as 1st pen, 1st and 3rd cockerel and special for 10 best birds in the show. Don't you really think such stock would be worth the prices we ask? We are now in the height of the season and would advise direct orders at the prices we quote below. If our shipping date does not suit you, money will be cheerfully returned. These prices are for our Select quality. Prices on the Exhibition grade will be mailed on request. We guarantee the value on either grade the best in the country, as reported by Government Day-old Chick investigators.

LINE BRED White Wyandottes

You new man in the poultry world! Are you going to take up breeding this year? Do you appreciate what the most important thing is you must consider? It is to get line bred stock. You older breeders! Have you had a hard time getting started in real quality? Do you know what was probably wrong? The purchase of stock not line bred, either "hit or miss" or picked up outside somewhere to fill your order with. You old breeder, have things gone wrong with your matings this past season? You possibly introduced a bird that did not have a "history," or you have bred too close without system. Now then! You all need the introduction of **line bred stock** to help you to complete success. I can furnish it and can furnish nothing else. **Three firsts** on young stock at last Madison Square Garden Show, 1st collection and many other prizes. This tells the quality of my birds and the results obtainable—only possible from line bred stock. Catalog and mating list.

SILVER LACED WYANDOTTES

STOCK and EGGS.

EWING & ROMICH Lock Box 393 CRESTON, O.

Mention American Poultry Journal when writing to advertisers.

The second year you will have the same old hen in pen 1, and her one best daughter, and her best son, select these birds as tho your entire future depended on your getting the best one, make the selection solely on Standard points, and vitality, as shown by activity, strength, and size of the fowls. Get the best one.

The chicks from pen one will now give you pullets for pens 2, 3 and 4, and the chicks from pens 2 and 3 will go into the laying pens, this will provide for a normal degree of increase each year and at a rate that is not too rapid to make it impossible of maintaining.

By holding your breeding stock down, and forcing them to rest, never allowing them to lay more than 40 eggs per bird per year, you will find that they are doing the resting for the entire flock, and their daughters will be able to give you two good years of profitable work.

This will leave you 190 layers this year, and give you about 280 for next year, and if you sell off one-half of the poorest birds at two years and carry the others over till the third year, you will find that you have about 380 layers, and the fourth year you will have about 730.

Hens are capable of doing profitable work for three years, and will earn a greater net profit, by doing that than they will if forced to lay 365 eggs the first year of their lives, and you will find that many will not stand up to the high pressure work, but if the breeding stock be handled as indicated, you will find that a larger percentage of your fowls will lay 200 eggs or more, than will be the case if you trapnest and breed from your high producers.

Certainly following a sane system of breeding you will not be reporting so many fictitious accounts of high production and endeavoring to connect with what the fool is said to part with readily, but you will be earning a decent, respectable living, and earning it honestly, while your flock is increasing in numbers and vitality at such an easy rate that you will hardly know where your success has come from.

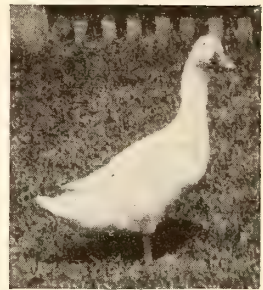

I have a friend who has started five times, and each time with a different breed, and each time with a known strain of 200-egg producers, five times he has succeeded in raising a hen that laid from 200 to 220 eggs in a year, and four times he has been compelled to abandon his project, on account of what he calls low fertility, but what may better be described as *no vitality*, and is due to exhaustion of the hen in making her high record; the result of his fifth attempt cannot be known before the present hatching season ends, but it will not be hard to guess from the fact that he paid \$1 each for eggs and one of his hens has laid 224 eggs for the twelve months ending December 1, 1915.

Just what breed he will try next is hard to surmise, but it is certain that he is not yet in the poultry business, and he has been at it for five years, while if he had followed the outline I have presented his flock would now be large enough to support the family, and yet would never have gone beyond the limits of the ability of the wife to handle, until it was able to compensate the husband for all his time and attention.

The success of such a system depends on the proper selection of the foundation stock, and will be handled without the expense of incubators and brooders until such a time as the size of the flock would make the machines an economy. One does not have to raise a complete

WOOLERY FARM, Box Y, BLOOMINGTON, IND.

new flock each year to earn a profit, if one goes at the subject intelligently.

Raising 1,000 chicks to get 400 layers, good, bad, and indifferent, is a deal of work, and may easily become a deal of expense, but if each pullet raised is carried thru two profitable seasons, and half of them are giving returns the third season, the work of raising is so much lighter that the slight difference in income is hardly noticeable.

Fowls retained as breeders and never allowed to lay more than 40 eggs each per year will get better every year till they are six or in some cases eight years old, and by following the outline one will be able to raise a flock of two thousand layers, all descended from one hen, in six years time, and still have her there on the place to see the work of her progeny. That is why I insist on making such a careful selection of the first hen to be placed in the first breeding pen, I intend her to stay there until the entire flock is just like her.

Better have 100 hens earning a small net profit for each bird, than to have 2,000 birds, each one losing a small amount of her year's food, that she is not able to pay for.

The plan I have outlined, may look very slow, but it has the advantage of being very sure to win, it is not making promises of great returns, but with a little time given to work away from home, at first, the flock will pay its way and increase in numbers gradually.

By this plan others have succeeded, and more will succeed. Many a puzzle may be easily solved, by taking it slowly and carefully, when to rush in would only be to make it impossible of solution, and this is one of them; take it slow and easy, make every hen give you two years' service, breed your own layers, in small numbers at first, and grow up with the business.

Herb E. Sharp.

Testing Eggs in Water.

Q. A poultry book by Stephen Beal says that testing eggs on nineteenth day by dipping in water heated to 103 degrees, is a desirable method; because, besides being an accurate way of selecting eggs with chicks from those added or containing dead chicks, the water softens the shell, making the exclusion of the chick easier. Being still a student and unable to make experiment, I would like your opinion whether this method is advisable.

Banang, Union, Manila, P. I. J. M.

A. The method named is practiced by placing eggs in water at 103 degrees and noting whether floating egg moves or is

150 Eggs to
600 Eggs
Capacity.

stead of half inch lumber, as is used in most machines, we use one inch lumber. We use three solid inches of mineral wool packing instead of one-half to one inch. Our heating system is made of 28-gauge double galvanized iron instead of thin, flimsy material. The Schwalge is **screwed**—not nailed—at points where strains come. No paper, cardboard or other similar material is used in any part of the machine. We easily could cheapen our machine without spoiling its appearance, but it would not hatch so well or last for as many years as it does.

Schwalge Sectional Incubators

The Sectional Idea

Schwalge Sectional Incubators are built so that they grow into a mammoth incubator simply by adding sections. You join the second section to the first, the third to the second, and so forth, until you have a mammoth. All sections are heated by one lamp. A patented device maintains uniform heat in all sections. You can start with a Schwalge of 150 eggs, or any of the other sizes, and gradually add until you have a mammoth incubator. This is not possible with any other machine.

Best Built Incubator in the World. Get This Catalog FREE

The very best materials and the highest skilled workmen combine to make this the best built incubator. Together with its numerous exclusive features of importance—more than any other incubator on the market—it is the best hatcher it is possible to build. We use genuine California Redwood, thoroughly dried so that it won't warp. In-

Write Your Name on a Postal

are wonderful hatchers and they last a lifetime. H. C. Nickel of Frederick, Md., said: "I hatched 385 chicks from 400 eggs. Results obtained far above what I got from my other machines, all having eggs from my own stock."

Note these exclusive Schwalge features: 3-pipe radiator has double the heating surface of any other heating system. Original ventilating and moisture systems bring pure, fresh, damp air—full of life-giving oxygen—into the egg chamber. Double Wafer automatic thermostat positively assures even temperature. The Schwalge reduces chicks dying in shell to a minimum. The correct proportion of heat, air and moisture hatches healthy, vigorous chicks that will live and thrive.

Sold on a Trial Guarantee

Select your Schwalge Sectional Incubator from our 1916 catalog, which we'll send free and postpaid if you write for it. Try the machine 40 days, and if it doesn't hatch all the chicks that you think it should, return it and we'll refund all of your money. You are the judge. You must be satisfied. What you say goes. You run no risk buying a Schwalge. For if it doesn't satisfy we refund your money. Send today for our 1916 illustrated catalog.

Prevent Stampeding In The Brooder House—The One Danger Of Brooding In Large Flocks—

Stampeding and crowding at feeding time is completely eliminated by the use of the Norwich Automatic Exerciser and Feeder as the chicks are fed a little at a time and all the time, while the Norwich Automatic Air-Lock Fountain with Cup Guard prevents drowning, supplies an abundance of absolutely fresh clean water, and the constant care, worry and labor of feeding and watering are all reduced to a purely automatic action.

RESULTS—PEACE, QUIET AND COMFORT

insuring rapid and perfect development and the best and strongest chicks you ever raised, for they must work and exercise for a living just as Nature intended they should. Expert poultrymen know there is nothing that will develop chicks as perfectly or as rapidly as the Norwich Feeder.

Try this method on our guarantee of satisfaction and save the little fellows you are sure to lose where stampeding and crowding is the rule every two hours when hand-fed.

Tell us how many chicks you are going to brood to a flock, and we will tell you exactly how to put the house on an automatic basis that will prevent loss, reduce labor and produce results.

EGG PRESERVATIVE CO., 2000 Broadway, New York

still; failure to move being presumed to show that egg contents are dead. While more or less successful, we do not consider the test practical. We also doubt its value in assisting in successful exclusion. The most that can be said for the method is that it probably does no harm, if the water is maintained at proper temperature and the eggs are not chilled. A more satisfactory method of applying moisture at this period of incubation is to dampen a cloth in water at about 104 degrees and spread this over eggs in the machine on 19th day and allow it to remain several hours or until eggs begin to pip. Some incubator operators moisten the eggs with a brush wet in warm water.

Hens Have Swollen Legs.

Q. Have four hens that have badly swollen legs. Started on one at first, grew worse until they are twice as big as normal. Hens seem feverish, appetite good, comb fine, seem all right enough in every other way, but are not so active in their movements. **A. D.**

A. May be caused by tight leg bands or may be due to injury. Sometimes due to frostbite and also to inflammation of veins. Some cases are tubercular. Would remove any leg bands. Examine the birds for broken bones. Put affected birds in a sling to keep them off their feet; rub legs with oil of cajuput; keep them under observation until you can determine more definitely the exact nature of the trouble.

Bred-to-Lay Brown Leghorns.

Q. Can you recommend some breeder of S. C. Brown Leghorns that are bred to lay, free range stock, somewhere near this part of state, from whom I could buy eggs or baby chicks or both? **Alma, Illinois.** **A. D. Nichols.**

A. Consult advertising columns. We are not sufficiently informed concerning the plants or methods of all advertisers, but possibly publication of this letter may bring you desired information.

Brown and White Eggs in Same Incubator.

Q. Do you think it detrimental to the hatch to incubate brown and white shelled eggs in incubator at same time? **Ohio.** **Subscriber.**

A. For last two seasons we have incubated both brown and white eggs at same time in same incubator and have not noted any poor results. Last year we ran a hatch with eggs from White Leghorns, White Plymouth Rocks, White Wyandottes, Buff Wyandottes, Barred Plymouth Rocks, Rhode Island Reds, Cornish and White Faverolles, all in same machine and hatch was good in all varieties. All these eggs were pretty much the same size and shells equally strong. Would not expect small, thin-shelled, white eggs to do well in same tray with thicker shelled, large, brown eggs.

Animal Food.

Q. Do you consider animal food absolutely essential for good egg production in winter? **Ohio.** **Reader.**

A. We do, and at all seasons of year

would supply animal food, unless the supply of insect life on range is unusually good. We use good quality fish or beef scrap the year round.

Contamination.

Q. I have Buff and White Leghorns, males and females, all running together thru the winter. If separated for four weeks before using the eggs for hatching, will chickens come pure white and pure buff stock or will there be a mixture?

Nova, Ohio.

C. W. S.

A. If you mate up your White and Buff pens carefully and do not use eggs until four weeks after such mating there will be little danger of contamination. However, some hens when mated at the beginning of period of laying carry the fertilization of that mate for a longer period than others, so that there is the possibility that some hen which mated with male of other variety may throw chicks of his get for the full period of her first lay, which might be longer than four weeks. Such cases are the exception rather than the rule.

No Droppings Boards.

Q. How do you handle droppings when no droppings boards are used?

Conn.

S.

A. Dry earth or other absorbent is used under roosts. Droppings cleaned out about four times a year.

Bolted Windows.

Q. How are windows opened when bolted on?

Middletown, Conn.

M. C.

A. Such windows are not opened until spring. In spring these windows are taken off when first settled warm weather starts and remain off until frost comes in fall; wire being used over openings. In monitor top windows, same are now made hinged at top to open out and are held open by iron rods.

Zenith or Chimneyless Burners.

Q. Where can the "Zenith" or chimneyless burners for brooder lamps, mentioned in brooder article, be obtained? Our local dealer does not know about them.

Michigan.

R. W.

A. The burners are manufactured in Connecticut, but at this writing we are unable to locate manufacturer's address. You can obtain such burners of E. F. Hodgson Co., 116 Washington St., Boston, Mass.

How Many Eggs Did She Lay?

Q. Rhode Island Red pullet hatched April 4, 1914, and laid first egg October 8, 1914, at age of 6 months and 4 days.

On account of limited room I was compelled to put her in a pen with laying hens and consequently she had to fight for everything she had to eat and I know that at night her crop was not more than half full.

She laid 16 eggs in October and 25 eggs in November. After that I lost track of the number, but I do know she was laying again the next November in her yearling year.

Now, from this data, how many eggs, in your opinion, did this bird lay during her first year? She hatched out and raised a bunch of chicks last spring. I believe I once read that a pullet that would average 20 eggs or over her first

laying month would, no doubt, lay 200
eggs or over her first laying year.

I intend to mate her up this spring
with a young cockerel and try to raise
some males from her to breed to my
flock another year.

Sheldon, Ia. B. B.

A. Better put your question to Prof.
James Rice, Cornell Poultry Department,
Ithaca, N. Y. He appears to be the chief
exponent of the "early and late" method
of determining egg yield. We would
not attempt to guess the pullet's first
year egg record.

Analyses Wanted.

Q. (1) What is the content of the
following grains: corn, oats, barley,
wheat, wheat middlings, kaffir corn, bran,
cottonseed meal, alfalfa?

A. (1) Average composition:

Feed	Water	Ash	Protein	Fibre	Nitrogen—free Extract	Fat
Corn	10.6	1.5	10.3	2.2	70.4	5.0
Wheat	10.5	1.8	11.9	1.8	71.9	2.1
Wheat bran	11.9	5.8	15.4	9.0	53.9	4.0
Wheat middlings	12.1	3.3	15.6	4.6	60.4	4.0
Barley	10.9	2.4	12.4	2.7	69.8	1.8
Oats	11.0	3.0	11.8	9.5	59.7	5.0
Kaffir	9.3	1.5	9.9	1.4	74.9	3.0
Cottonseed meal	8.2	7.2	42.3	5.6	23.6	13.1
Alfalfa	8.4	7.4	14.3	25.0	42.7	2.2

Q. (2) What would you consider a
good ration for a Leghorn for laying
and thru molt?

Elgin, Ill. B. F. G.

A. (2) In first place, we should for-
get about analysis tables and not en-
deavor to arrange a scientifically bal-
anced ration by chemical content. Sup-
ply a dry mash made of 100 lbs. each:

bran, middlings, corn meal, ground oats
and gluten feed; 50 lbs. each: alfalfa,
best beef scrap and best fish scrap. Sup-
ply a scratch grain of equal parts by
measure of cracked corn, wheat, oats
and barley. Vary this scratch grain ac-
cording to appetite and give most of
whatever the birds show preference for.
Supply greens liberally. At moulting
time get into a shady grove and supply
an abundance of greens, particularly
cabbage and garden greens. Give a
small amount of sunflower seed, feed
mostly on hard grains and allow dry
mash hoppers open in afternoon only.

Starting an Egg Farm.

Q. Do you advise starting an egg
farm with Leghorns near Chicago or
near New York City? Which would be
more profitable considering the high

prices of grain in or near New York?
Kankakee, Ill. J. S. L.

A. We can't recommend a location
for you. There are desirable oppor-
tunities near either city and near almost
any large city. The difference in price
of grain would be offset by similar but
wider difference in the price obtained
for eggs.

First prize White Wyandotte hen, the Chicago Coliseum Show, De-
cember, 1915. Bred and owned by L. J. Demberger, Box 89, Stewarts-
ville, Ind.

NEW REPRESENTATIVE IN THE EAST.

DESIRING to be of the greatest possible service to our patrons in the Eastern part of the United States, particularly in the New England and the Middle and Southern Atlantic States, we have decided to have one of our Chicago office staff become a resident near New York and Philadelphia to look after the interests of our advertisers.

P. K. White, who has for several years been associated with our Chicago office, handling correspondence and advertising, and who edited our 1915 Year Book, was introduced at the big New York and Boston Shows this season and has been selected to do this work. He is now making an extended trip among the Eastern poultry farms in the interests of this journal.

It is Mr. White's purpose to render advertising service to our patrons; he has had a wide experience in the advertising field and is well versed in the preparation of good copy for pulling advertisements. Consult him as to space and the wording of your ads. He is sent to give you real and efficient service, to consult with you concerning an advertising campaign that will pull and pay. He will not try to sell you space you do not need or to "load you up" with an advertising incumbrance. **AMERICAN POULTRY JOURNAL** has advertising space to sell at an honest valuation, we believe it is worth all and more than we ask for it, we want you to take what you need to get results.—no more,—and we expect to give you good service and to "deliver the goods." Consult our Mr. White concerning our advertising service and about all matters in regard to your advertising campaign. He is now making up his itinerary for the Eastern territory this spring. Write to him at 197 High St., Hartford, Conn., and ask him to call at your plant to demonstrate our advertising service.

ARTHUR A. PETERS.

ARTHUR A. PETERS, of Denver, Colorado, has served the American Poultry Association well and faithfully as Vice-President since 1913.

As a presiding officer he is always fair and courteous to all in his decisions. He has been worked harder as a presiding officer than any other man who has served the association in a like capacity and he has made friends for the association wherever he has been since coming into office.

The verdict of those in attendance at the last three annual meetings of the association is one of unstinted praise for the dignity and fairness of Mr. Peters' presiding. The American Poultry Association cannot do better than show their appreciation of his worth by again electing him as their vice-president. Mr. Peters is deserving of the highest honors and should not find it difficult of election to any office in the association.

On the official ballot now in the hands of members, he is slated as a candidate for the vice-presidency. No man in the association is more worthy of your support. Vote for him.

GOLDEN WYANDOTTES

No eggs or baby chicks. Winners at World's Fair, 1915. Will sell choice breeding females at 2 for \$5.00. A few fine male birds for sale.

J. S. Pennington Box A Plainfield, Ill.

TANTALIZER

FIRST COCKEREL---Champion, Boston (1916)---BARRED ROCKS

He is a great grandson of my Boston King, 1st Cockerel Boston (1913), one of the greatest sires in the world.

Just consider—this cockerel class was composed of 43 birds, representing 20 of the leading breeders of the East. On my total of eight entries I won 1-3 cockerel, 4 pullet, color special, 3rd cockerel bred hen, 3rd cockerel bred pullet, 4th cockerel bred pen. Bear in mind that my birds have been consistent winners at the Eastern shows for the past 6 years. Not the largest breeder in the country, but what birds I have rank with any of them. A postal will bring my mating list. My prices will suit you.

T. CADWALLADER Box 1602 Salem, Ohio

THE SUSSEX AN ALL-AROUND FAMILY FOWL.

By DR. J. H. PRUDHOMME,
Thurmont, Md.

AT THE PRESENT time it is doubtful if there exists any one breed that challenges the attention of poultry fanciers as does the Sussex, England's noted egg-broiler-table fowl, or the all-around family fowl.

The Sussex comes to us with ancient pedigree. They are classed with the Dorking, which is the oldest of all English breeds, having been introduced into England, it is said, by the soldiers of Caesar at the time of the Roman conquest of Britain.

Sussex are now bred in four colors—Speckled, Red, Light and Brown—sufficient color patterns to meet the tastes of the most fastidious.

The Speckled is the oldest of this variety. This is a tri-color fowl, resembling in color type the Mille Fleur Booted Bantam, and they are triple mottled, as it were, having a slate under color, with brownish red bar tipped with white, with colored white and main tail feathers. The English Standard markings of white flight and tail feathers in the Speckled Sussex having been tabooed by American fanciers. The Speckled is the most distinctive color pattern of the four varieties. There are none of similar markings and color among our Standard breeds.

The Red Sussex are very similar to our Rhode Island Reds, having the same black markings, but different in type,

and weight, and color of shank and toes—the Sussex being heavier than Rhode Island Reds. In the latter variety the under color should be "red to the skin," while in the Red Sussex the under color

S. C. Buff Orpington cock, first and grand champion at Canton, Ill., 1915. Owned and bred by H. M. Woods, Carlinville, Ill.

should be slate in the female and "slate shading to red" in the male; the surface color should be a dark shade, "mahogany red" being used to describe the surface color. A noted authority claims that the Red Sussex male is the darkest, richest

colored of any red fowl, the plumage being set off by white shanks and toes, which are characteristic of the best grade of English and Continental table fowl. Further, it is claimed for the Red Sussex that the heavy red coloring will not fade out in summer as is customary with the plumage of other Red fowls, the plumage of which by mid-summer generally presents a faded, mottled appearance.

The Light Sussex have the same markings characteristic with the Columbian Wyandottes. The Brown Sussex should be somewhat similar in color pattern to the Brown Leghorns.

In type the Sussex differ from the Orpington, as also from the R. I. Reds. The typical Sussex should be long in body, long straight back, broad shoulders, with full, well meaty breast; the feathering should be close and not so fluffy like the Orpington. The above characteristics appertain to the breed and are found in typical specimens. Breeders should strive to maintain these dominant features.

As layers, one of England's foremost poultrymen says that after testing every known breed he is bound to confess that no breed can compete with the Sussex as winter layers.

As broilers the Sussex have no superior. The ease with which the chicks may be raised is a strong point in their favor. The usual vigor of the breed being manifested in the chicks from the day they are hatched, making for rapid development that soon puts them out of harm's way. A Western breeder says of the Sussex: "Last year I placed a

SIMPLEX SUPPLY HOUSE Pontiac Bldg. CHICAGO, ILL.

limited lot of eggs under one hen and gave her the chickens which she hatched, so that each chick would have the same care. Part of the eggs given her were fresh eggs from vigorous stock of another variety which I had at home, while the Sussex eggs were imported from England and were at least three weeks old when set. Thus the home eggs had this advantage. But even with this considerable advantage the Sussex feathered out and reached frying size much sooner than the other variety. The pullets matured earlier. Now, when we consider that the Sussex attain the size of the Plymouth Rocks it makes it a variety worthy of investigation."

As table fowl the Sussex holds, probably, the first place par excellence, to wit, quoting from a contemporary writer: "When the Sussex were introduced into the London market as dressed poultry, they made the biggest hit of any breed ever produced on that market. It is safe to say more chickens go into the London market than into any other market in the world, and I know for a fact that in dressed poultry in the London market alone there are more Sussex fowl than any other three breeds combined, which proves beyond a doubt or question that as table fowl they have no equal. At the Dairy Show, London, where they specialize in having a big classification in dressed table fowl, Sussex have won the great prizes for the 'best pair of pure bred table fowl' for over ten or twelve years, and this year they equaled all others with a pair of cockerels shown, winning cup, medal, and all the leading honors available for dressed poultry, weighing, when dressed, twenty-five pounds. This will give the reader some idea of the size, vigor and vitality of this wonderful breed."

American Poultry Association Election.

At time of going to press, we had not been able to secure any official report on result of the nomination ballot of the American Poultry Association.

Apparently members either did not know who to vote for as candidates on nominating ballot, or they had but little interest in the matter. From reliable sources we are assured that out of the supposedly 6,500 or more members of the American Poultry Association only 585 voted the nominating ballot.

The leading names on nominating ballot—as stated to us—were:

President, E. E. Richards.....423 votes
Vice-president, A. A. Peters...279 votes
Secretary, S. T. Campbell.....585 votes

For Executive Board there appears to be more competition: In district 2, the leading names were, Thomas M. Poole and Harry M. Lamon. In district 5, Harry H. Collier, L. C. Byce, Robert G. Bailey and J. D. Veach. In district 6, John S. Martin, W. W. Coates and Richard Oke.

Cleveland, the second week in August, led as time and place of meeting.

DIAMOND CORN GLUTEN MEAL

FOR a profitable egg yield, hens must have more protein than straight corn or grain can supply. You want an *available protein* and a *low-priced protein*.

Protein from corn—a natural poultry-food source—is far more digestible, hence more available for hens than the protein in beef or packing-house scraps—also it costs much less.

Diamond Corn Gluten Meal is the most concentrated and lowest priced corn-protein on the market. Guaranteed 40% protein, 1.5% fat, 4% fibre.

This is the reason that Diamond Corn Gluten Meal is the chief ingredient in the feeding formulas used by successful poultry men.

Mix Diamond Corn Gluten Meal with your low protein starchy grains for a month. Watch your egg yield and be convinced.

Write us for feeding formulas.

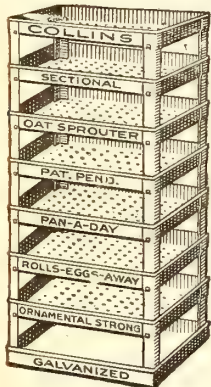

If your dealer does not carry Diamond Corn Gluten Meal, write us and we will instruct you where to get it.

W. H. COLLINS, 336-D Washington St., NEW YORK

WHY I BREED BUCKEYES.

By LINDLEY T. PLACE.

I HAVE always been interested in poultry, especially pure bred chickens, but had never found a variety that stood for my ideal of what a breed should be.

When I first started with Buckeyes, I found my chance of getting ahead better than with an older breed that had been boomed by breeders who had the means of monopolizing the trade. I also found the Buckeyes not only beautiful, but combined utility with beauty, and why not keep beautiful pure bred birds?

With food prices high (and going still higher), no one can keep scrub stock of any kind, as it costs no more to keep pure breeds.

Although they were made Standard in 1905, their good qualities are still unknown to many breeders.

The reason for this is, that before they were fairly established the originator's health failed and she was obliged to give up the business for a time, altho she is raising a few choice birds and the birds are not only being boomed by her, but by many other fanciers who have the means and the talent for so doing.

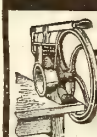

Therefore I can truthfully say that the Buckeyes are to be one of the world's best breeds and the demand for good Buckeyes far exceeds the supply, as they are rapidly growing in popularity and have come to stay.

For the benefit of those who are not familiar with the breed, I will write a short description.

They are strictly an American breed and originated in Ohio. Their blood line comes from the Cornish, Black Breasted Red Games, Buff Cochins and Barred Rocks. From the Cornish comes the pea comb. In appearance they resemble the Cornish, being strongly Oriental in type, the thighs stout and muscular, the breast broad and rounded at sides, showing lack of fullness. The Buckeyes are a dark mahogany bay in color. They are large birds with small pea combs, abundant feathers, and are of an active temperament, which makes their productiveness a sure thing. Their eggs are a soft brown in color and of good size. The market demands are met by a heavy carcass encased in a clean yellow skin.

They fill every requirement and to those who are not fully satisfied with what they have or to those who are just starting in the business let me advise you to buy Buckeyes. I have bred them for several years and have found them satisfactory. Pleased customers in nearly every state, as well as foreign countries, attest to their value for beauty and profit.

TOM Barron's Winners

All Egg Contests Prove Them

World's Greatest Layers

Are Still at MORRIS FARM
R. 4 - Bridgeport, Conn.

I have the Most Profitable Flock of Poultry in America, and you cannot afford to be without my blood.

Remember, you take my word for nothing. I state only official records made at National Laying Contests.

In Wyandottes—

\$8.69 worth of Eggs by BARON-ESS V, the 282-egg hen, at North American Contest, 1913-14. Four others laid 274, 271, 258 and 252 eggs. The five laid 1337 eggs, an average of 267, or \$8.21 per hen.

I have a flock of 27 Hens that gave net profit per hen of \$4.67. These are the three Contest Flocks I bought of Barron, and which he had at Pennsylvania, Connecticut and Missouri. All my Wyandottes are bred from these.

In Leghorns—

I am breeding the Highest Pedigree Cockerels in the World, out of the 288-Hen, winner at Newport, Eng. This affords new winning blood for the Barron breeder. Others, 284, 256, 255, etc.

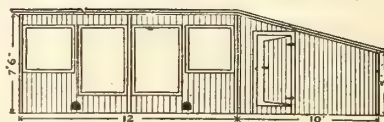

In Buff Rocks—

280, 265, 263, 240, etc. I guarantee all contest birds.

All Breeders tested by Storrs' College. Free of white diarrhoea.

Cooke's Black Langshans

Winners at the
Largest Shows

Won this year at Milwaukee, 1st and 3rd cockerel, 2nd and 3rd cock, 1st, 3rd and 4th hen, and 1st and 2nd pullet (nine entered, all placed). Many prizes won at Racine, including 1st cockerel and grand champion of the show, all varieties competing. My White Leghorns made a grand win this year at Racine. Sale of Black Langshan Cockerels now on. Prices reasonable. Eggs for hatching, stock for sale. Limited number of pairs, trios and breeding pens at prices to suit in both breeds.

GEO. COOKE - Route No. 1 - **RACINE, WIS.**

HOMESTEAD SILVER CAMPINES THE VIGOROUS STRAIN

At the big Boston Show, January, 1916. At the largest winter show of the season—Cock, 1-2-3-5-6; hen, 1-2-3-4; cockerel, 1-3-4; pullet, 1-3-5-6; 1st and 2d exhibition pen; 1st display; special for best cock, hen, cockerel, pullet and pen.

Palace Show, New York, 1915. At the second largest show of the season, Frank L. Platt, Judge—1-4 cocks, 1-2 hens, 1-5 cockerels, 2-4 pullets, 2nd exhibition pen, 1st display, special for color and type, 1st hen, special for color, 1st cockerel.

New York State Fair, 1915. The first big show this season—2nd cock, 1st hen, 3-5 cockerels, 2-3 pullets; 1st old exhibition pen, 2nd young exhibition pen.

Won at Boston, 1915. 13 regular prizes—4 firsts, special for best display, best cock, hen, cockerel and pen.

The comment on the quality and condition of our birds at the above shows was universally—wonderful!

We have many more good birds at our Homestead Campine Farm, and if you are interested we shall be pleased to send you one of our new catalogs. Our aim always is to give full value and satisfaction. We would suggest to our prospective purchasers they book their orders as soon as possible that they may not be disappointed, for from present indications the demand for both hatching eggs and stock will be greater than the supply.

We have mated about twenty pens for 1916, all headed by prize winners and we are giving our patrons the full benefit of every pen and every prize winner and not a single egg is shipped from our farm that we would not use for our own purpose.

Harnly's Quality White Orpingtons World's Champions

Won Championship White Orpington male two years in succession, on different males (these cocks now head two of my best pens). Championship White Orpington male, Chicago Coliseum Show, December, 1914, (defeating the 1914 and 1915 Madison Square Garden first prize winners). Grand Championship White Orpington male at Panama-Pacific International Exposition (competing with the whole world).

At the World's Fair Won the Highest White Orpington Honors

Grand Championship White Orpington male, American Poultry Association medal, California White Orpington Club special, first prize pen (five birds taking first prize, no other White Orpington breeder had more than one bird win first place), second hen (55 competing), 2nd and 7th pullet, 3rd cock (one only competing) won in each class I competed.

From September 1st, 1914, to September, 1915, won 127 premiums at big shows, 44 first prizes. Some magnificent stock for sale. Start right this season. Get bred-to-lay stock that will produce winners. **EGGS**—Book your orders now so that you will not be disappointed.

FERTILITY GUARANTEED. FREE CATALOGUE.

REWARD OFFERED—At San Francisco my registration books, containing the addresses of hundreds of visitors interested in my exhibit, to whom I had promised catalogs, were stolen. Any help in the regaining of this property will be rewarded.

Mrs. J. H. Harnly, 2304 Elisha Ave., Zion City, Ill.

QUEEN KATHERINE III
A winning Boston Pullet, 1916

Grand Champion IVANHOE

Has proven his title by winning 1st Cock, Shape Special and Champion Male at Boston, 1916. In competition with 90 Barred Rock males shown by 25 exhibitors (4 more birds than the entire open class at Madison Square Garden this season). Three places on cockerels, two places on pullets, four places on pens. This, with **Grand Champion Cock**, makes us the highest or largest winner in these three classes.

At Madison Square Garden, three first prizes and best display in competition with international winners on Single Comb Brown Leghorns.

A few eggs for hatching. Send for new mating list.

EASTERN NOTES.

By P. K. WHITE.

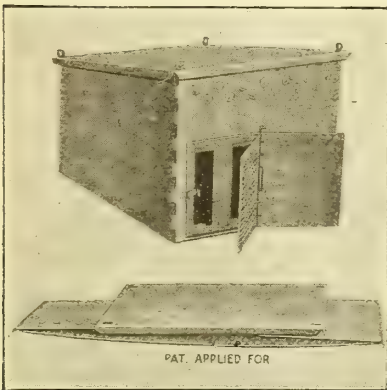

Those of our readers who know Mr. W. H. Saart of Attleboro, Mass., will, I am quite sure, be very much distressed to hear of his wife's death, which took place a few weeks ago, after a very short illness.

She was a woman who took the greatest of interest in her husband's affairs and but a short time before her death she completed arrangements to move to their farm at Foxboro, so that they could devote more time to the poultry end of their various interests. She was a lovable woman, and to know her was to like her. Always full of merriment, so that to be dull in her presence was an impossibility.

Her death has caused a very sad blow to her family and many friends. She has departed, but the memories of her and their 26 years of happy wedded life will ever be with my friend, Mr. Saart.

In our February issue on page 323, showing a picture of 1st cock S. C. R. I.

BUTTERMILK

Semi-Solid for Poultry or Pigs

Makes hens lay more and better eggs. Saves the lives of little chicks. Buttermilk, aside from the food value, keeps the bowels regulated and the chick in a perfect state of health which other feeds fail to do.

Buttermilk condensed to a "thick, jelly-like product," eliminating 84 pounds of water from every 100 pounds of buttermilk. You only pay freight on 16 pounds instead of 100. It is 98% digestible. The "Ideal Food" for little chicks and pigs.

Approximate Analysis

Protein 18%, Carbohydrates, (milk sugar) 21%, Ash or salts 4%, Lactic Acid 4%, and Fat 3%.

CONSOLIDATED PRODUCTS CO.

Dept. C 1029 W. Adams St., Chicago, Ill.

Red, it is stated that this bird was bred by Rock Ledge Farm, Southboro, Mass. This is an error; they are the owners, but did not breed same.

The same is true with the 4th S. C. White Leghorn shown on page 322, owned by Willow Tree Poultry Farm (McKean Bros.), Beverly Farms, Mass.

On page 516 of our March issue is shown a picture of a prize Barred Rock winner, owned by W. W. Carpenter, East Providence, R. I. Thru error it was stated he was a great grandsire of Santee. This should be Tantalizer, 1st cockerel, Boston, 1916.

CORRECTIONS.

The 3d prize Single Comb Buff Leghorn pullet at the Grand Central Palace Show, 1915, was won by Glenwood Poultry Yards, 30 Glen Road, Rutherford, N. J., instead of Glenwood Poultry Farms, West Caldwell, N. J.

An error was made in last month's issue in the caption under the White Rock male owned by P. J. Olle, Racine, Wis. In this number Mr. John Grant and Mr. Olle were both given credit for winning 1st cock in the White Plymouth Rock classes. Mr. Grant won 1st cock and Mr. Olle 1st cockerel. We are glad to make these corrections at this time.

In our report of the Chicago Coliseum Show in the January issue we neglected to mention the fine win made by Houston & Hofius, So. Charleston, Ohio, in the Red Sussex classes which was in detail as follows: 2 cock, 1-4 hen, 1 chl, 1 pit, 2 old pen, 2 yng pen.

There was also an error made in regard to the photo of the Golden Campine male appearing on page 437 same issue. This particular specimen won 1st cock at the last Madison Square Garden Show instead of 1st cockerel as stated under the photograph. This was not the bird that won 1st at the World's Fair, San Francisco, 1915. The winners referred to above are all owned by Martling Hennyery, P. O. Box 186-N, Ridgefield, N. J.

Correction of caption under cut of Columbian Wyandotte cockerel of Leo A. Lee, page 434 of the March issue. This should read: 1st prize Columbian Wyandotte cockerel at the World's Panama-Pacific Exposition, San Francisco, November, 1915. Owned by Leo A. Lee, 5626 Wilson Ave., Chicago, Ill. This bird was on exhibition only at the Greater Chicago Show, January, 1916; it being another cockerel of Mr. Lee's that won 2nd prize at this show.

An error was made in the March issue in the ad. of H. L. Rikhoff, Occidental Bldg., Indianapolis, Ind. This should have read Single Comb Brown Leghorns instead of White.

Page 563, same issue, Chas. McClave was given credit for winning 1st cockerel in Rouen ducks, Chicago January Show. Mr. B. M. Owens, Shiloh, Ohio, won 1st cockerel, while Chas. McClave won 2d.

CLASSIFIED ADS.

UNDER this heading ads will be inserted for seven cents per word each month for less than three months, and five cents per word each insertion for three months or longer. Changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under **classified headings.** No ads accepted at less than an average of sixty cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Write your copy plainly, as upon this the correctness of your ad largely depends. When placing your ads remember that advertisers using Classified Ads get better returns from AMERICAN POULTRY JOURNAL than from any other poultry journal—none excepted. On writing any of these advertisers mention AMERICAN POULTRY JOURNAL. All copy for Classified Ads must reach us by the 17th of month preceding date of issue.

ROSEMOUNT WHITE WYANDOTTES. Profusely illustrated catalog now ready. Get acquainted with the ever-better kind. Franklin, Pa. 2-7

BARGAIN EXTRAORDINARY. At the Milwaukee Show, January 21st to 26th, 1916, a show that compared favorably with The Coliseum, in White Wyandottes I won 5 out of 6 firsts in the second largest class in the show. I won 1st and 5th cocks; 1st and 2nd hens; 1st cockerel; 1st and 2nd pullet, and 1st old pen. If you question the quality of my Wyandottes, write Judges W. C. Pierce, Theodore Hewes, or Mr. Wells. I have 8 pens mated of the very best Wyandottes in the country, and I will sell eggs from these pens in limited numbers at \$3.50 per setting of 15 eggs—not more than 2 settings to any one customer. If you are interested, place your order early. Frank E. Hering, South Bend, Ind. 2-4

QUALITY WHITE WYANDOTTES. Eggs \$1.50 per 15. G. A. Howe, Waterloo, Ind. 3-5

S. C. — ANCONAS — R. C.

OUR WIN AT THE GREATER CHICAGO SHOW PROVES THAT WHEN WE SAY

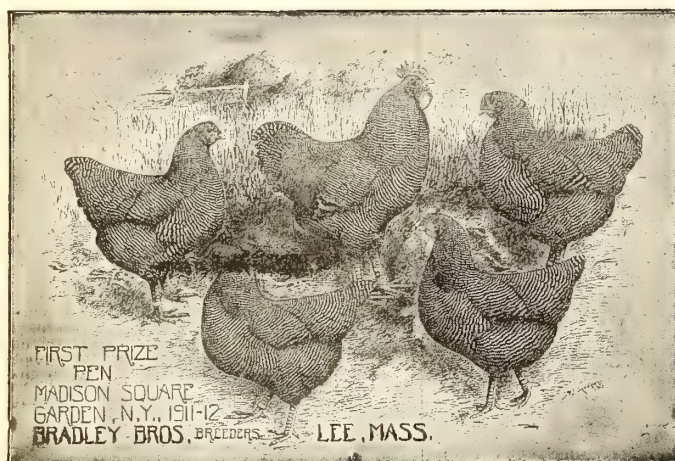

"Tis quality you want, 'tis quality we have." Won second cock, first, third hen, first, second cockerel, third pullet, first old pen and first young pen. Single Combs, Rose Combs, we won second cock, first, second hen. Our exhibit of Anconas was the sensation in Ancona Alley. Our display pen of those Mammoth White Leghorns had a crowd around them all the time. No wonder, hens weighing 7 to 8 lbs., and the cockerel 8 1/2 lbs. Big layers of big eggs. Catalog now ready. Are you on our mailing list?

BOWER-KNOLL FARM

Judge E. G. TEANEY, Mgr.

OLNEY, ILL.

"At the Canton Show, when the State Barred Rock Club met, we won with your strain, 1st, 3rd and 5th Cockerel; color special on Cockerel; 5th Cock; 2nd Hen; 2nd Pullet and color special on Pullet; also 2nd Cockerel bred Pullet. We won the state club cup for the best four exhibition birds, viz.: Cock, Cockerel, Hen and pullet, and also special ribbon for the State Champion Cockerel. The above winnings were made in a class of nearly 300 Barred Rocks. The 1st Cockerel, 5th Cock and 2nd Hen were from eggs purchased from you."

FRED ANTHONY & SON

November, 1915.

North Lawrence, Ohio.

BRADLEY BROS., LEE, MASS.

Barred P. Rocks

we bred and raised, again hold their place as FIRST WINNERS at many leading shows.

POINTS OF OUR RECORDS AT NEW YORK:

At Madison Square Garden: 4 Firsts, 4 Seconds, 3 Third Prizes, besides other awards have been won by us at a single Madison Square Garden Show. Three times have Males of our breeding won 4 of the Five prizes offered in the class including firsts.

No other exhibitor has ever won THREE FIRST PRIZES at a Madison Square Garden Show where we competed. The highest cash price ever actually paid for a B. P. Rock so far as has come to our knowledge was given for a male we bred and raised. Three times have Males of our breeding won four of the five prizes offered in the class, including FIRSTS.

At our last Madison Square exhibit, 1911-12, we won 6 prizes on males, 3 prizes on females; both 1st and 2d yards; \$25.00 Cash Special for best display (won by nearly double the points of the closest competitor), also Silver Cup for best pen.

29 of our "Lee Belle" Females have been First Winners at Madison Square Garden Shows alone, and 60 Winning Males at Madison Square Garden Shows have been bred by us.

Many birds have been sent by us to customers in England, Russia, Japan, South Africa and other Foreign Countries. They arrive safely and give good satisfaction.

Eggs for Hatching We are selling eggs for hatching from our best pens at \$10 per 12; \$20 per 26; \$25 per 33. These, we believe, will produce many 1st winners for our customers the coming season. Orders should be booked at once; even for later delivery. We do not sell baby chicks.

Selected Breeding and Show Birds, Fancy Specimens—Males and Females For Sale. Ringy, blue-tinged, sharp barred birds from our best pens. We never had a finer lot of birds for every demand. Price list free. Illustrated circular free. Our breeders for sale after May 20th, 1916.

BRADLEY BROS., Box 909, LEE, MASSACHUSETTS

CHAMPIONS!

That's what you want. That's what all good poultrymen want. I've got them—real champions.

"Ask the Judges" who won at Hagers-town, Chicago, Chattanooga, Panama-Pacific Exposition, Memphis, Atlanta, New Orleans and other big shows.

Andrews'

Premier Strain Barred Rocks

They'll win blue ribbons for you just as they did for me. The price is reasonable. Write me.

How about some eggs from the best Barred Rock birds in America? Only \$10 for a setting of 15. You simply can't afford to miss this offer if you want prize-winning birds next year. Send for the Handsomest Poultry Catalog Ever Published.

O. B. ANDREWS

Box A-303, Chattanooga, Tenn.

Originator-Breeder America's Premier Strain Barred Rocks—no other breed.

GET MY PRICE

THIS is the finest, cheapest, most efficient hatcher I have been able to produce after thirty years. Thousands have proven it perfect in heat, moisture and ventilation. Round like a nest, just the right size, 66 eggs, for economy, convenience and results. Fitted with famous Sheer Automatic Fixtures, and guaranteed to hatch every hatchable egg. The 1916

"Peerless-66"

is the only practical, all-metal, fire-proof, everlasting hatcher ever produced.

Make any new or old incubator absolutely automatic with Sheer Fixtures. Automatic Lamp, Regulators, Complete Heating and Ventilating Systems, Incubator Parts, etc. World's standard 25 years. Big Book FREE.

H. M. SHEER COMPANY, 163 Hampshire St., Quincy, Ill.

Don't Break Valuable Eggs!

"Ask the Judges"

Get this: An egg standing on end doesn't break easily. Every egg in the Andrews Efficiency Egg Carrier stands on end. The egg is protected by air cushions, too.

I ship the finest eggs you can buy. I had to have a safe, economical carrier. I invented this one, and it's a daisy! Ship all the valuable eggs you want—they'll never be broken.

Andrews' Efficiency Egg Carriers are efficient, economical and easy to handle. Keep these prices:

Commercial Egg Carriers

One Doz.	Size	.50 per doz.
Two	"	.80 " "
Three	"	\$1.10 " "
Four	"	1.35 " "
Five	"	1.60 " "
Ten	"	3.10 " "

Get my low prices on Baby Chick Boxes.

Hatching-Egg Carriers

15 Eggs	.95 per doz.
30	\$1.60 " "
50	2.25 " "
100	4.20 " "

Shipped only in lots of 2 dozen, each size.

See that Air Chamber?

Get these sure big helps for all poultrymen: Baby-Chick Carriers, Efficiency Coops, Colony Houses. You'll be surprised at how much money you can save if you raise poultry with the right apparatus.

We manufacture a full line of poultry appliances and remedies, incubators, etc. These mean efficiency for your farm.

I've got a folder that will show you how to make money out of poultry. It's yours for the asking.

LONGFIELD R. C. REDS

Are again victorious at the great

Chicago Coliseum Show

Winning, December, 1915

3 FIRST PREMIUMS

and many specials. Our complete awards were: 1st cock, 1st old pen, 1st and 5th young pens, 2nd and 4th hens, 2nd pullet, silver cup for best display, silver cup for 4 best cocks, silver cup for 4 best hens, silver cup for 4 best pullets and shape and color specials on male.

We were the only Rose Comb Red exhibitor winning more than one first premium. We have won best display three successive years—a record. Our First and Champion Cock of 1914 was again 1st in 1915, winning shape and color specials both years—another record. At this great show the past five seasons we have won more than four times as many first premiums as any competitor.

We have a fine lot of stock for sale in both good breeding and exhibition birds—on approval always. Write for free illustrated mating list. Fertility guarantee 100%.

"WE LEAD - OTHERS FOLLOW"

How to Secure Early Winter Egg Producers

Start Now With Your Baby Chicks

PREPARE NOW if you would have eggs in plenty when "strictly fresh" prices are soaring high. The poultry raisers who have learned how to produce winter eggs are those who are making their flocks pay big profits. It's only a matter of correct feeding. Start your baby chicks right if you would be assured of this extra profit, which comes from no other source.

Begin With Red Comb Chick Feed

Then watch the steady, sturdy growth that starts the pullets shelling out eggs and profits before the cold weather sets in—and keeps at it all winter. There's a Red Comb Poultry Feed for every purpose. Each one is a scientifically balanced ration, the result of 46 years' experience. Prepared from the choicest whole grains, mixed by experts, unexcelled for purpose intended.

Red Comb is now used in every part of the United States to make profitable market poultry—to develop layers—to condition show birds. Red Comb contains the minimum of grit—percentage guaranteed on each sack. *With no grit if preferred.* Costs less to feed Red Comb than to buy the materials and mix them yourself.

Let Poultry Experts Tell You the Secret

The names and winnings of these poultry experts are known to poultry raisers everywhere. They represent the highest success in every poultry line—show birds, market birds, layers. Mrs. J. H. Harnly: "The high honors accorded my birds at the Panama-Pacific Exposition proclaim loudly the excellent conditioning value of your Red Comb Feed."

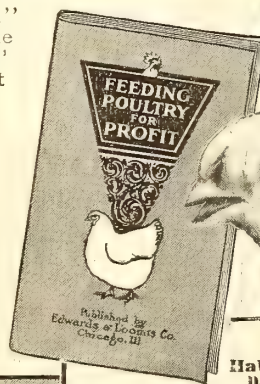

A prominent poultry authority says: "We feed Red Comb," in his paper on "Feeding Chicks From the Shell to the Gravy," in our free book "Feeding Poultry for Profit." This man has a record of making 1000 hens pay a net yearly profit of \$4580.

Red Comb

Fine Chick Feed

"Mr. Sheppard, 'that speaks for itself'—does it not?"

When a customer wants birds that are sure to win, Jacobs—my superintendent—and myself pick out the birds. Once in a while we stop and admire their perfections. Yes, they do *speak for themselves*. If all of you could spend a few hours with me here, I never would need to spend another dollar to tell you of their good points!

All Anconas are judged by the standard of *Sheppard's Famous strain*.

For nine straight years I have been far and away the biggest individual winner at the World's Greatest Shows, including Madison Square Garden.

The World's Best Winners

At the 1916 Madison Sq. Garden Show, we won eight First prizes; seven Seconds; six Thirds; six Fourths; five Fifts.

Now is the time to send your order for some good hatching eggs, or some breeders and get ready to win next year. Prices reasonable.

The World's Champion Layers

Great winter layers. Start laying when mere "kids." Keep it up! Have record of 256 average for flock.

Stock, Chicks and Eggs for sale. Write for catalog—send me your order. Either myself or Jacobs will give it personal attention.

Our Prayer

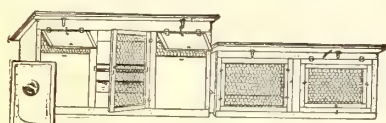

"How soon will the public get wise to the egg and utility humbug? Oh, teach the public to get wise to the fact that utility, like charity, covers a multitude of sins. That real utility means combining both meat and egg laying qualities, with some regard as well to the requirements of the Standard. That the average utility dodge is merely a subterfuge in numerous instances to get rid of inferior stuff. That of all the liars since the days of Annanias none have surpassed these fellows who have nothing but 200-egg hens. Teach the sucker public a little arithmetic that 200 eggs means 16 2-3 dozen per year. That the huckster (who is certainly useful in some spheres) will pay 25 cents the year around on an average. That would make one of these almost perpetual motion hens which are so common yield a gross income of \$4.16 per annum. She can be kept for a year for \$1.50, leaving a net income of \$2.66. Open the eyes of the buyer to the fact that if these statements were actually true that the owner wouldn't advertise and sell a hen for \$2.00 that would net him in 12 months \$2.66. Such hens are gold mines and gold mines are not being disposed of at such prices. And in conclusion let us have a return of the true fancier and of the sane days. And, above all, oh Lord, let us have peace."

We saw an advertisement the other day offering 12 baby chicks of one breed \$1.00, of another 12 at \$1.50, and claiming they were especially bred and trained for laying and exhibition purposes.

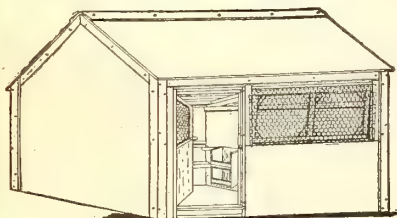

And the suckers bite. It seems that in more than one thing the man who claims the most and talks the loudest is the one the public falls for. Most of these fellows are giving you a five-cent show and charging \$2.00 for standing room. We never had a hen to have hemorrhoids from too much laying. We have been expecting to see an advertisement that some one had hens that laid 200 eggs per annum and yields twice a year from two pluckings 2 lbs. each, plucking of feathers finer than eiderdown and that brought \$2.00 per lb. in the market and offering for 50 cts. each.

We strive for the beautiful; if you are after that and not expecting something for nothing, send us 30 cts. in stamps for our new colortype catalog—S. C. Buff and Blue Orpingtons, R. I. Reds, Houdans, Japanese Longtails, Blue Peafowl, Wild Turkeys, White African Guineas, White Runner Ducks, Fancy Ducks, and 16 varieties Pheasants.

A handsome book of 368 pages, each 6x8 inches, encumbered with 112 full page illustrations

THE NEW REVISED EDITION of the Standard of Perfection

NOW READY, and will be the only recognized authority on all Standard requirements of American-bred Land and Waterfowl until 1923—eight years in service.

Since 1874 the American Poultry Association has issued under copyright, many editions of the Standard, but this issue is, without doubt, the masterpiece.

It is the one great book most used by judges, fanciers and breeders, and the only recognized authority in awarding prizes in the Poultry Shows of the United States and Canada.

The new edition contains 112 full page illustrations of Chickens, Bantams, Ducks, Geese and Turkeys by America's foremost artists.

A new nomenclature indicating each section of all Standard breeds and varieties—male and female.

A glossary of fifteen pages describing and illustrating many technical terms used by poultry breeders.

A complete list of recognized disqualifications for each American standard-bred breed and variety.

A chapter on cutting for defects. A full and complete standard description of each and every recognized Standard breed of Land and Waterfowl, giving the standard requirements in every section, weight, size, color, markings and shape.

No poultry breeder should be without a copy

Buy a copy and know the standard requirements for all American standard-bred breeds and varieties. Price, cloth, \$2.00; leather, \$2.50. Sent postpaid.

Cloth bound and American Poultry Journal one year \$2.50
Leather bound and American Poultry Journal 1 year \$3.00

Cockerels for sale bred direct from The World's Champion Laying Pen composed of ten hens from Tom Barrons' Pen O, international contest winners, 1914, at Mountain Grove, Mo. They are large, vigorous cockerels in good condition and health, March and April hatch. Absolute satisfaction guaranteed. Write today for descriptive circular. **BABY CHICKS FOR SALE.**

ULTRA-AVES POULTRY FARM

M. H. WAUGH, Proprietor. : 511 Loucks Avenue : PEORIA, ILLINOIS

Rudy's Perfection White Wyandottes

100%
Fertility

100%
Guaranteed

Why not start with a strain noted for egg production as well as exhibition qualities? My eggs are priced within the reach of every one. Hundreds of my customers have hatched winners from eggs bought of me. All my own guaranteed winners each season are hatched from the very pens from which I sell eggs. Fifteen grand pens now mated for 1916, headed by sons and grandsons of Rudy's Perfection, Perfection Jr. and Superior. Every female is of high perfection quality. **EGGS FROM THESE PENS, \$5.00 per 15; \$25.00 per 100; utility pens, \$15.00 per 100.** Order direct from this ad, or send for egg circular. **REMEMBER—**I'm the only breeder guaranteeing 100 per cent fertility without extra charge. I replace all infertile eggs returned to me.

GEORGE H. RUDY, Route 15, Mattoon, Ill

IS THIS IT?

The Guarantee you've been looking for? Well, here it is: The Martling Guarantee not only includes the fertility, but guarantees a specified number of chicks from every setting of eggs purchased. A prominent authority says, "The Campines are very prolific layers of large white eggs"—"they are rated among the 200-egg producers."

The **MARTLING SILVER CAMPINES** is the greatest Prize-winning strain of any breed of fowl in America. Awarded Gold Medal, Am. Poultry Ass'n: Championship, Panama-Pacific Exposition. The Strain without a Peer. Mating List ready—let us send you one.

Simplex Perfection Heated Feather Brooder

This shows the netting drawn tight to act as a rat guard; also the way the chicks hover in the natural feathers of a Simplex Perfection Heated Feather Brooder. This also shows the heating apparatus and the way the feathers protect the chicks. This picture was made to show the inside of the brooder; the brooders we sell have a solid body of galvanized iron and are guaranteed in every respect.

Net prices of the Simplex Perfection Heated Feather Brooders.

50- Chick **\$5⁰⁰** 100- Chick **\$6⁰⁰** 150- Chick **\$7⁰⁰**

CATALOG FREE

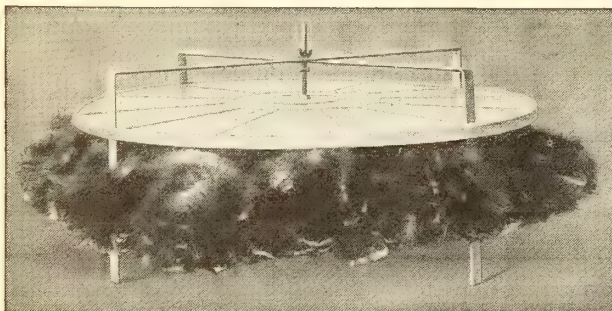

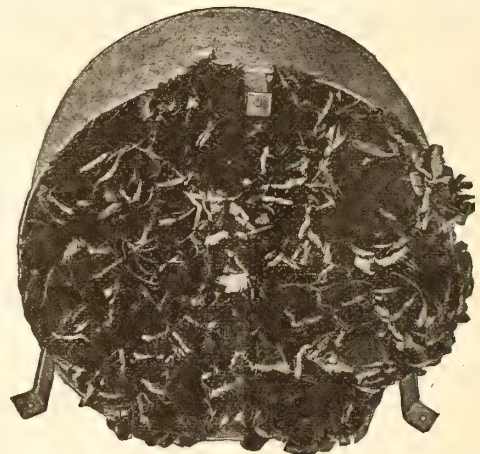

Send for our complete catalog giving full information on these brooders as well as other supplies. We sell direct to the consumer. Find out about our profit-sharing plan.

No Excuses,
No Delay, that's
the Simplex Way.

And this is a bottom view of a Simplex Perfection Fireless Feather Brooder. It is made the same as the heated brooder, but in place of the heating apparatus it has an extra tuft of feathers in the center. It is used in a room where a temperature of about 60 to 70 degrees can be maintained. We recommend the fireless brooder and guarantee that it will raise more and stronger chicks than any other.

The net prices of the Simplex Perfection Fireless Feather Brooders including rat guard and runway, also certain as on heated brooders.

50- Chick **\$4⁰⁰**
100- Chick **\$5⁰⁰** 150- Chick **\$6⁰⁰**

This is our natural feather hover for heated brooder houses and for use in home made brooders. These hovers are being successfully used in brooder houses of the foremost breeders. The disc to which the feathers are attached is raised off the floor by means of a skeleton frame—in all other respects they are made the same as the hovers in our complete brooders.

50- Chick **\$2⁵⁰** 100- Chick **\$3⁵⁰** 150- Chick **\$4⁵⁰**

You cannot afford to be without them. Sold under a 30-day guarantee. Absolute satisfaction or money back.

RKD BABY CHICK FEED

"My, but it tasted good—and was good for me. I just grew and grew, feathered out in a hurry and never had a day's sickness. " 'Twasn't long before they put me on

RKD CHICK FEED

and I began to get sleek and round and fat, until I was the plumpes' looking pullet you ever saw, the pride of my mother hen and the joy of my master. When the time approached for me to begin earning my own living and paying my master back in eggs for my board, he began feeding

RKD POULTRY FEED

"Now, I am the best layer in all the yard. You can hear my proud cackle oftener than that of any other hen on our farm. I laid 225 eggs last year. That's the high record around our neighborhood!"

R K D Poultry Feeds were originated on the famous Arcady Farms, owned by Arthur Meeker, General Manager and Vice-President Armour & Co., Chicago. They are scientific combinations of the finest quality of grains—mixtures that have proven themselves wonderful result-getters—made in a scrupulously clean manner—by brand new, modern machinery. Put up in 100-lb. bags. For sale by most dealers. If your dealer cannot supply you write us direct.

A WEALTH OF POULTRY KNOWLEDGE

Save One Dollar

Here is your opportunity to get the three oldest poultry papers in America at half price. All three are published monthly—filled with good, sound, helpful advice, which may save you many times the cost of your subscription.

**Three for
the price
of One—**

That's what
you get when
you subscribe
to this com-
bination at
this time.

American Poultry Journal, Chicago, Ill.

Established 1874

"The One Great Poultry Paper of America" is conceded by all to be the leading poultry paper of the world. It contains from 68 to 252 pages in each issue, profusely illustrated; contains no free reading notices or puffs for advertisers, but sound common sense articles, the kind that are profitable to both amateur and professional poultrymen. Mailed to subscribers promptly on the first of each month, it arrives when expected and avoids disappointment.

Western Poultry Journal, Cedar Rapids, Ia.

Established 1889

Has long been recognized as one of the most up-to-date and progressive poultry papers of the West. Edited by E. E. Richards, the present President of the American Poultry Association. Clean, instructive common sense articles on the care of poultry—and editorials of like nature make this one of the favorite poultry papers in the Western States.

Poultry Keeper, Quincy, Ill.

Established 1883

Is the second oldest poultry paper of America. Although not as large as the other two, it has a following of readers who stand by it like the "Rock of Gibraltar." The many interesting articles each month make it well worth reading and it fits nicely into this well selected combination of poultry papers.

American Poultry Journal, 1 year, \$1.00 } **ALL**
Western Poultry Journal, 1 year, .50 } **FOR**
Poultry Keeper, 1 year, .50 } **\$1.00**

No matter where you are located, how many chickens you keep or how much you know about poultry, you cannot afford to let an opportunity like this slip by. Think of it—ALL THREE for the regular price of American Poultry Journal alone.

Both new and renewal subscribers may take advantage of this offer. New subscriptions will commence with current issue. Renewal subscriptions will be extended one year from expiration of present subscription. This offer void after May 31st, 1916.

AMERICAN POULTRY JOURNAL

A WEALTH OF POULTRY KNOWLEDGE

\$1

**All Three for the
Regular Price of One**

\$1

This offer will appeal to every red blooded poultryman. The monthly publications embraced in this offer are leaders in their chosen field and well known throughout the country. All three are pioneers—they have been tested and have passed the final examination—the “survival of the fittest.”

American Poultry Journal, Chicago, Ill.

Established 1874

Has the envious reputation of being “The One Great Poultry Paper of America.” It’s the oldest poultry paper in America and the largest and best poultry paper in the world. Its circulation covers the entire United States, Canada, Mexico, and several hundred copies are sent to foreign countries where the best is considered just good enough. It contains from 68 to 252 pages each issue, and is mailed to subscribers promptly on the first of each month.

American Poultry Advocate, Syracuse, N. Y.

Established 1892

Is one of the most widely known and consistently advertised publications in the field. It is composed of interesting and instructive reading and is conceded to be one of the best, clean-cut poultry papers in the east. Published monthly.

Poultry Item, Sellersville, Pa.

Another “breeder’s choice,” is well edited, progressive, and instructive, finding popular favor among those poultrymen who enjoy good editorials, not “muckraking.” The helpful hints given in the many articles are advantageous to both amateur and professional. Published monthly.

These three papers, the choice of breeders, will be sent to you postpaid every month for one year, at half price.

American Poultry Journal, 1 yr., \$1.00	} All 3 for \$1.00
American Poultry Advocate, 1 yr., .50	
Poultry Item, 1 yr., .50	

The three papers being sold together for the price of American Poultry Journal alone makes this one of the best offers which can possibly be made.

Both new and renewal subscribers may take advantage of this offer. New subscriptions will commence with current issue. Renewal subscriptions will be extended one year from expiration of present subscription. This offer void after May 31st, 1916.

Cyphers Co's FREE Books

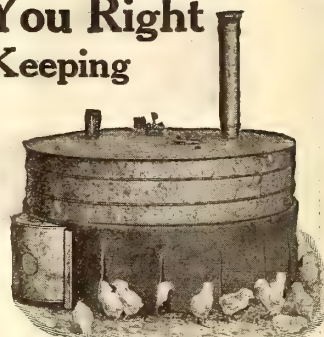

Give Latest Methods—Start You Right A Complete Course in Poultry Keeping

THE tide has turned for poultry keepers! The recent high prices of grain products have been reduced; we now offer Cyphers Poultry Foods at lower prices than ever before in our history. Meat prices are high. Now is the time to *make money with poultry*.

"The Profits in Poultry Keeping," 172-page Poultry Guide and Complete Catalogue, full of information *vital to every one* interested in poultry. Tells *how the big poultry successes have been made*. Write for copy—free.

"Best Methods of Brooding"—Handbook describing the "Cyphers Way" of rearing chicks. Mailed FREE upon request.

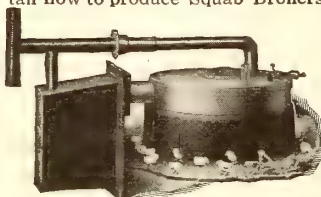

"Poultry Foods and Feeding"—FREE upon request. Many poultrymen say our methods have *saved them hundreds of dollars*. Tells in detail how to produce Squab Broilers, Regular Broilers, Fryers, Roasters, Capons, etc. Write today.

Cyphers Portable Hover
Price \$9.00

Portable Hover

For indoor brooding meets *your individual needs and conditions*. No other indoor brooder can give you as good results. Provides ideal conditions for flocks of 50 to 100 chicks; *lamp-heated; all-metal; automatic regulation; pure, warmed air under hover; sanitary; convenient; movable*. Operated in any poultry house or apartment. Write for Special Circular.

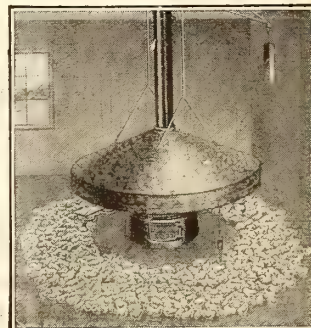

Cyphers Adaptable Hover
Price \$9.00

Adaptable Hover

For outdoor brooding. Comfortably accommodates 50 to 100 chicks. Installed in any colony coop, goods box, piano box, or any style of outdoor brooder case. Used *indoors* in large poultry houses if desired. *Automatic control of heat and ventilation*. Keeps chicks warm in zero weather; wind-proof and fume-proof; all metal. Tens of thousands in successful use. Send for special circular.

Colony Hover—Coal Heated

If you are raising chicks in flocks of several hundred each to *reduce cost of labor and equipment to lowest point*, you want the Cyphers Coal-Burning Colony Hover—must have it for successful brooding. Is simple and easy to operate; has *simple and reliable regulator*; furnishes ample heat for coldest weather; is *completely dependable in every detail*. *Positively has no equal*. Write for "When, Where and How to Use" circular, mailed free.

Coal Burning Hover
Price \$15.00 Up

Chick Foods

"Chick Murder" aptly describes the needless loss each season of hundreds of thousands of chicks, the chief cause being *incorrect feeding and brooding*. Several years ago we started out to reduce this annual slaughter; we developed what is now known as the "Cyphers Way" feeding and brooding chicks. This method and the use of *Cyphers Dry Grain Granulated Chick Food, Developing Food and Growing Mash* is positively guaranteed to overcome the chief causes of chick losses, including the *prevention of white diarrhea*. In your own best interests we urge you to *give the "Cyphers Way" a FAIR TRIAL*. We use only sound, sweet, wholesome grains, correctly proportioned for best results, properly milled and uniformly mixed. Send for Current Prices and name of your nearest dealer handling Cyphers Foods. Insist on the *Genuine Cyphers*—accept no substitutes.

SWEEPSTAKE CHAMPIONS

1st Cock, Coliseum, 1915

In S. C. White LEGHORNS

I won the lion's share of honors in the great contest between quality S. C. White Leghorn breeders of the East, West, North and South. Because of the strength of the class competing at the Coliseum, Chicago, no fair-minded man will question the right of my stock to be considered the equal of any strain in the country in exhibition qualities. So far as egg-laying qualities are concerned, they have for years been unsurpassed.

**Just Consider That in S. C. White Leghorns at the
last Coliseum Show**

I won first and third in cocks; I won first young pen.
I won first and fourth in cockerels; I won second and third old pens.
I won the Coliseum silver cup for best 5 cockerels.
I won the Coliseum silver cup for best display.

SILVER CAMPINES

At the last Coliseum Show, Chicago, the very cream of the best fowls of the country were exhibited.

THE CAMPINE CLUB OF AMERICA

held its annual meet at the Coliseum, and the leading breeders of the East, the head-liners in Campinedom, were present with their exhibit. The classes were the very strongest, every one agrees, that have ever been exhibited, and

THE GREATEST HONORS WERE MINE

I won two of the five awards in cockerels.
I won three of the five awards in hens.
I won three of the five awards in pullets.
I won three of the five awards in old pens.
I won three of the five awards in young pens.
I won the challenge cup of the Silver Campine Club of America.
I won the Coliseum cup for best display.
I had 48 Campines entered; 38 were placed.

from profitable layers is your only guarantee for success in the poultry business.

ISN'T it a serious matter when eggs are selling at 40c to 60c per dozen and your hens are not laying? Ask the man who has failed. Also ask him if he would recommend the breeder he bought his stock from. You cannot be too careful in the selection of your foundation stock; the stock from which you will produce your future layers. **I breed for eggs and can supply you with stock that will lay when the egg prices are high.**

That Means Your Success.

EGGS

I can usually make shipment of eggs promptly upon receipt of your order. I would, however, advise that your order be booked in advance. This will assure delivery when you desire them. Prices, 10c, 20c and 30c each.

BABY CHICKS

I am rapidly catching up with my Baby Chick orders and I will be prepared to make shipment of Baby Chicks of most grades and breeds within five to ten days after receipt of your order. Instruct me to book your order now. Prices 20c, 35c and 50c.

Buy Your Foundation Stock Now

In all of my eight varieties, namely, White and Buff Orpingtons, White and Barred Rocks, Rose and Single Comb Reds, White Wyandottes and Single Comb White Leghorns, I can supply Breeding Stock, young or old, that will produce a future flock of the kind that has in the past given entire satisfaction to over 3,000 customers. I herewith present your opportunity to start right. My free instructive catalog has helped others and will undoubtedly help you. Write for your copy today.

R. A. HEWES—PIONEER POULTRYMAN

R. A. HEWES, a specialist in Black Langshans, was born on a farm in Crete, Ill., in 1859. He began poultry keeping at the age of 10 and has bred Bantams, Light Brahmas, Buff Cochins, all varieties of Plymouth Rocks, Leghorns, Wyandottes, Games, water fowls and pigeons. In 1881 he started with Black Langshans, with pure Croad stock, and was so pleased with this variety that he decided to give his attention to Black Langshans exclusively. Mr. Hewes' aim has been to produce the best possible Black Langshans, regardless of cost, and he has paid and received the highest prices for breeding stock on

record for his variety. Fowl of this strain have been shipped to every state in the Union, to England, South America, Mexico, Porto Rico and Canada.

Mr. Hewes lives on a village farm of 18 acres in Crete. He hatches and rears all chicks by the natural hen method and considers that his experience has proved that this is the best plan to produce vigorous prize winners and the most of them. His wife is a poultrywoman of experience and ability, an expert with Langshans, and he says that his success is largely due to her able assistance, skill and good judgment.

Disqualifications or Defects—Which?

The Folly of Using Disqualifications in Passing on the Merits of Pure Bred Poultry.

By C. H. Latham, Lancaster, Mass.

(NOTE.—Read this article, it is brief and to the point and it should interest you if you are breeding or intend to breed exhibition poultry. Not long ago a well-known poultry judge publicly announced that he would no longer judge at poultry exhibits because strict application of the Standard required him to disqualify specimens that are "priceless as breeders." A good many poultry judges believe that only deformities and disease should disqualify a specimen and that defects should be cut in accordance with the Standard and the judgment of the adjudicator. Mr. Latham is a real fancier, he is a veteran in breeding good quality exhibition specimens and he knows how to mate and why he makes a certain mating. He certainly knows how to see and rightly appreciate values in breeding and exhibition stock. His opinion on this subject should be of value to all interested in poultry breeding.—Editor American Poultry Journal.)

WO OR THREE GENERATIONS ago people rode in two-wheeled carriages, wrote with a quill pen, wore homespun clothes; all of which was sufficient for their day and generation, but as the world moves—and in these days it moves very fast—the people of this day and generation cannot follow closely in the footsteps of our ancestors,—worthy tho they may have been. We must either keep up with the times or become "has beens."

We all believe that the charter members of the American Poultry Association worked with honest zeal in making a Standard that was running overfull of disqualifications, many of which are considered the correct thing today. Whether or not these disqualifications have caused us to make faster progress in our work of perfecting the different varieties of poultry, is a question that has been discussed pro and con for many years.

Let us look into the meaning of the words *Disqualification* and *Defect*:

Disqualification—That which renders unfit, disability.

Disqualified—Unfitted, incapable, unworthy.

Defect—Absence of an essential part, physical imperfection, to be deficient, to fail.

Defective—Wanting a requisite amount of quality, insufficient, deficient.

Let any breeder of pure-bred poultry go into his flock looking for birds for exhibition, and, if he applied the real meaning of the word *disqualification*, he would find a host of disqualified birds in his flock. How few of them he would

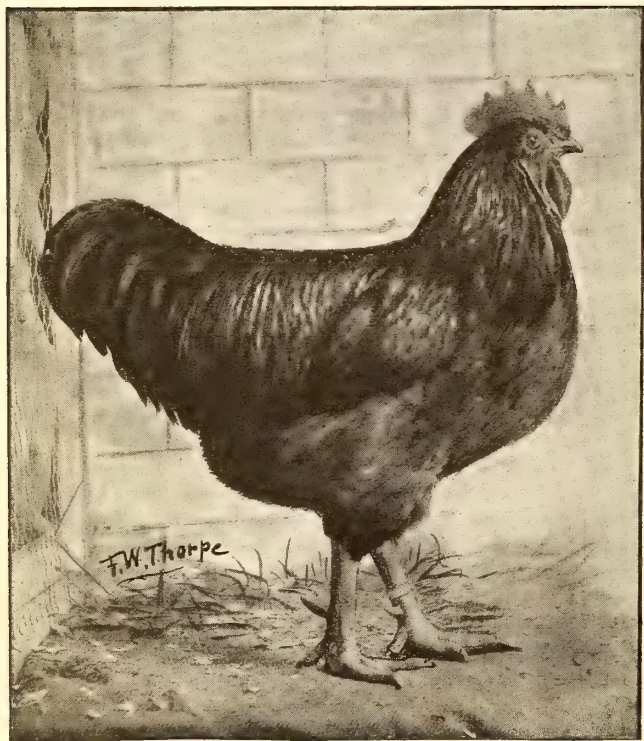

find that were not *unfitted*, *incapable* and *unworthy*. If he strictly applied the full meaning of the word *disqualification* he would condemn a very large part of them as unworthy to be in his yards as breeders, for if they were *unfitted*, *incapable* and *unworthy* to go to a show and stand some chance of winning prizes, they would be unworthy to be used as breeding birds.

While if he applied the meaning of the word *defect*, or *defective*, he would be considering his birds with their true value—all more or less defective, as all birds truly are. Many of them might lack *essential parts* to be able to win in a show, be *deficient* in one or more ways, that would cause them to fail in a competition, still would not need to be birds unworthy to be in any breeder's yards,—and they might have the *essential parts* needed to make strong breeding birds. If the breeder followed the Standard strictly for disqualifications, he would condemn every bird that showed a little fleck of white in a lobe that should be red; that had a small side-sprig on the comb, stub in the shanks, down between the toes, squirrel or wry tails, etc. When these may be just a taking back to some ancestor, or, in case of the squirrel or wry tails, may be caused by wrong cooping of the bird when quite young which caused this shape when his parents did not have the defect at all. We have our poultry shows to get together an aggregation of birds to determine their good qualities, as an education to the breeders, and to determine who has the best of its kind. We should have these birds so judged that the *real merits* of any birds could be brought out. If we apply the Standard for disqualifications this cannot be done. *Every year we see very fine birds thrown out as disqualified, and a much poorer bird, with far more defects, take the winning.*

The writer recalls a grand hen, exhibited at one of the late Madison Square Garden Shows, being disqualified for having a small side sprig to her comb, that amounted to only having a serration slightly out of line with the other serrations of the comb. This hen was worth a whole row of those that did win in her class. Any breeder of experience would rather have had this hen as a breeder than perhaps all the other hens on exhibition in her class. But because she was judged on a "has been" idea, the best bird in the whole class was not considered as worthy to win.

A bird to be disqualified should be considered from a breeder's point of view. If it is *incapable* of producing birds true to its breed and kind, or *unfitted* or *unworthy* to be used as a breeder, then it might be considered disqualified without injustice to the specimen. No bird that is *capable* should be disqualified, nor should a judge disqualify a specimen that shows itself to be *fitted* to produce creditable specimens of its breed and variety. If a bird showed unmistakable evidence of having blood of some other variety, this showing in strong shape characteristics and splashes of plumage of a foreign breed, disqualifying such a specimen would be simple justice to everyone. Such evidence of foreign blood with actual deformities should be the only disqualifications considered. Everything else could be safeguarded by cutting for defects. It is an outrage to the bird, and to the breeder exhibiting it, to disqualify the specimen for some of the senseless ideas that we are still considering as needed.

Should a bird with a small side-sprig, or a bit of white in lobe, or stub in leg, or bit of down between the toes, in Barred Plymouth Rocks, be thrown down as disqualified, and a specimen showing very heavy dark or light tips to the feathers, causing the whole beauty of the surface color to be lost, be allowed to win over the other specimen, when the "disqualified" specimen may have splendid type, beautiful

One of the Madison Square S. C. R. I. Red winners, in the breeding pens of H. P. Deming, Box 500, Winsted, Conn.

color and barring? I say *No*, and all real breeders will say the same.

Some years ago a disqualification was made for two or more solid black feathers in wing or tail of Barred Plymouth Rocks, and this was put thru mainly by the efforts of a poultry publisher and editor, whose zeal far exceeded his experience as a breeder.

Now, should these black feathers in these sections be any worse than black feathers in any other section of the bird?

How many hens and pullets in Barred Rocks shown today, that are *capable* of winning in hot competition, ever enter that competition without *leaving a lot of black feathers at home as being unworthy, unfitted and incapable of being worn if she is to be a winner?* I would be willing to state under oath, *Not One Specimen!*

Some years ago the writer had in his yards a high winning male bird that had been sold for a high price. To simplify the story, the bird was "Century First," owned by Grove Hill Poultry Yards, exhibited at Boston Show in 1900, winning

first prize and then sold for \$100, which was a large price in those days. I obtained the use of this bird and bred him that year, and afterwards bought him of the man who paid \$100 for him. He bred that year males that won as cocks in Boston Show, in 1902, first, second, third and sixth, with the old bird "Century" winning fifth when three years old. The following year he *moulted two solid black feathers in flight feathers of one wing*, that previously had always been with every feather barred. *According to this useless and absurd disqualification this superb breeding specimen was disqualified and worthless.*

Is there any justice in such foolish methods of judging birds? It is up to breeders to stamp this out, leave the foolishness with the ones that usually go to the meetings of the American Poultry Association and have the most to say about what shall and shall not be done and that the old disqualifications shall go on the same old way. *There are enough of our most skillful breeders to vote these useless ideas down and out; but they have got to get busy right now if they want to do it.*

"Cheerful Places for Fowls?"—Sure!

Woods' Open-Front Houses Make Good in the "Worst Old Fashioned Winter for Forty Years" and the "Snowiest March on Record at the United States Weather Bureau."

By Prince T. Woods, M. D.

CHEERFUL PLACES FOR FOWLS those houses were" is the way an editor of a contemporary sneeringly refers to the Woods' open-front poultry house in an article entitled "Not a Good Season for the Woods' House." We know from the balance of his article that he meant that remark to be nasty sarcasm; but for once in his life, at least, the pessimistic editor unwittingly voiced the truth. We certainly found our open-front poultry houses during the "old fashioned winter" just past, to be decidedly "cheerful places for fowls,"—we could not ask for more satisfac-

factory houses or for better results from the fowls. "Cheerful places for fowls?"—Sure!

The oldest inhabitant in these parts does not recall a winter in which we had any greater snow fall and it is reckoned that it was the "worst old fashioned winter for forty years." The *Boston Daily Globe* on March 16, 1916, said:

"Altho only half of the present month has gone, it has earned the distinction of being the snowiest March on record

at the United States Weather Bureau. The record keeping began back in 1871-2."

Some time after that report was published we had one of the worst blizzards of the season, with the heaviest snowfall we have ever seen in this section of Massachusetts—in fact, we recall nothing quite equal to it since our boyhood days at boarding school in New Hampshire. We had a real old fashioned snowbound experience and the roads about The Anchorage Farm were blocked with snow. The trolley cars, which run by our place from Brockton to Plymouth, did not run for three days owing to the blockade of snow drifts. Yet for all the snowfall, the drifts and the high winds, we did not have to shovel any snow from the roofs of our semi-monitor-top, open-front poultry houses. The flocks were happy and productive, the egg yield kept right on increasing and the houses certainly proved bright and "cheerful places for fowls." As soon after the storm as we could get a sufficiently bright day for the work we took a series of photographs of our houses to present to interested readers of *AMERICAN POULTRY JOURNAL*.

It is quite probable that in some localities where snowfall is uncommonly heavy, where there is no wind to speak of, and where the snow is wet and heavy, that it may be necessary to shovel off poultry house roofs. It sometimes happens with any type of poultry house or other building. But in our experience with semi-monitor open-fronts we have not found it necessary to shovel snow from the roofs. The semi-monitor-top is one of the oldest practical types of farm out-building and this type of house has been used with closed front for both poultry and hog houses since many years before we were born. The only originality ever claimed for the "Woods' open-air house" was the use of an always open front in this type of building and the adaption of this type of house in suitable proportions to the practical housing of poultry.

The quibble about semi-monitor-top poultry houses being dark and not "cheerful places for fowls" owing to snow drifts on the low front roof, which drifts are supposed to block the monitor windows, is a silly quibble. We have never yet had enough snow drift on a front roof to shut off any appreciable amount of light. Figure 1 shows the front roof of one of our open-front houses in the snowiest part of the woods on The Anchorage Farm and a bleak and wind swept location. Even a hasty glance at the picture will show the wide wind-riffle between the snow drift and the windows. As light comes from above, this drift did not shut out enough light to talk about. But assuming that the criticism was either fair or just—and we can conceive of conditions where snow might possibly block the greater part of the monitor windows, altho

Figure 1. Showing the front roof of a 20x20 Woods' house in the woods, March, 1916. Note the wind-riffle between drifted snow and windows; no light shut out here. (See "Cheerful Places for Fowls.") Yes, curious reader, the man ran out of green paint before he finished that door and he hasn't had a chance to finish it.

Figure 2. Dr. Woods' residence at The Anchorage Farm, Silver Lake, Mass., March, 1916. This clearly shows the screened open-front sleeping porch where the whole family sleep out of doors the year 'round. Note that this porch roof is even flatter than that of the semi-monitor top poultry houses and that the chamber windows are close to roof. No light shut out here by drifted snow and it is some storm swept location, too. Cheerful place for the family, we call it, and it helps toward great "adventures in contentment."

we have never experienced it—suppose that the monitor windows were entirely blocked, what of it? This house is 20x20 ft. It has four six-light, 8x12 in. pane, windows in the monitor. It has one such window in the east side and two such windows in the west side and the entire front is wide open for a space of 3x20 feet, less the space occupied by 8 studs, 2 inches wide, and the slide of the chicken door. With monitor windows blocked so as to shut off all light—a highly improbable condition—there would still remain much more open space for the admission of light than is found in most poultry buildings. Take the Tolman type open-front house for example—which is one of the best types of open-front house—and it has no more area for admission of light at any time than the Woods' house has with its monitor windows screened to prevent entrance of light. That fact should be patent to the most prejudiced pessimist. We have seen no quibble to date about the snow on the long, low, front roof of the Tolman house.

We had a good many dull and dark days during the winter just past; days when we had to use lamps late in the forenoon and light them again early in the afternoon. Yet, all thru this dull, dark weather we found that our semi-monitor, open-front houses were decidedly "cheerful places for fowls."

Figure 3. One of Dr. Woods' 10x16 open-front houses. A cheerful place for fowls and the house in which four Black Langshans were placed direct from shipping coops after their nine-day journey from the Pacific Coast in February, 1916. No sickness in open-air housed flocks and the egg yield and fertility is good. The birds in this house did not have to get acclimated, they went right to work.

In fact, we never had our flocks perform any better. Our White Rocks and S. C. White Leghorns laid 40% or better for all flocks thruout the winter. Fertility in January and February eggs ran strong at 80% and better in both varieties and March eggs in our own incubator tested 92% strong live germs on the 7th day, and we counted all blood-ringed eggs just as if they were infertiles. That certainly looks as if our open-front houses, this old fashioned winter, had proved "cheerful places for fowls."

Of Woods' open-front houses, on The Anchorage Farm, we have nine of the 20x20 ft. size and two of the 10x16 ft. size, a small Tolman open-front house, besides several small 3x6 ft. partly curtain-front coops for small matings. We carried eight varieties of fowl thru the greater part of the winter, but are thinning down to three varieties only and expect to keep only Black Langshans, White Rocks and S. C. White Leghorns hereafter. As sales of stock were pretty good in the fall we did not go into winter quarters with as many fowls as usual and we thinned down considerably thru sales of breeding and market stock all winter.

We carried thru the winter 160 White Leghorn females in flocks of 80 young and 80 old, with four males running with each flock, each flock in a 20x20 ft. open-front house. Front always open and no curtains of any kind. Not more than a dozen combs were at all touched by frost and then only the

Figure 4. More "cheerful places for fowls." One of Dr. Woods' S. C. White Leghorn houses in the woods, taken after big March snow storm in 1916. Note the big cheerful cockerel getting his tail up and head back ready to crow; he sounded his challenge just as the camera clicked. Eighty yearling hens in this house and all were singing the laying song and enjoying the bright sunny house. American Poultry Journal publishes a book giving plans of his houses. The title is "Open Air Poultry Houses for All Climates," and the price is 75 cents post-paid.

tips of the points, so that they show no evidence of frost-bite.

We had three flocks of White Rocks, each in 20x20 ft. open-front houses and, before these were reduced by sales, the flocks were made up about as follows: 30 adult hens with 3 husky cockerels, no combs frosted here; 80 large pullets with five males, three males here had combs touched by frost, but chief comb injury was thru scrapping and one male getting caught in wire fence; 40 large pullets and four males in an unsheathed matched-board 20x20 ft. always open Woods' house, two males lost points of combs thru frostbite and fighting and other two untouched by frost.

Three Black Langshan females and one male received on February 26 after a nine-day trip—during which they were half starved—from Spokane, Wash., were taken directly from the shipping coops and placed in a 10x16 ft. Woods' open-front house and began to improve from the start, no frost-bite here and egg yield good with fairly good fertility. Five Black Langshan pullets and a cock, also five hens and a cockerel of same variety, all from Crete, Ill., received early in March. Each flock put by itself in a 20x20 ft. open-front house and have shown only improvement since. No frost-bite here, tho weather was severe, and the egg yield has been good with fair fertility. A Black Minorca cockerel, from

Canada, was put in a 4-bird shipping coop in barn next to box stall, as temporary quarters, and he had comb and wattles frozen so badly that it was necessary to kill him. We have had experience enough with poultry to feel sure that frost-bite is not necessarily due to the manner of housing or lack of housing,—it seems to be more a matter of condition and it is quite as likely to occur in a closed house as in an open-front one or out of doors. In fact we believe there is less danger in the open-front house, at least we have found it so.

Figure 2 shows a view of our dwelling on The Anchorage Farm. The screened sleeping porch where the whole family sleep out of doors the year 'round, winter and summer, is plainly shown. This view shows the south front of our house and it will be noted that the roof of the sleeping porch is quite flat, flatter than on most of our poultry houses and that the upstairs windows are close down to this roof. There has never been sufficient snow on this roof to obstruct the light from these windows, nor have we ever been obliged to shovel snow off this roof. That open-front, screened porch is a mighty comfortable place to sleep, too, even when the mercury drops to 20 degrees below zero and sometimes to 28 degrees below, as it did on a few nights in January, 1915. "Cheerful place" for the family, we call it. If some of the pessimists would get a little out-door air and out-door living into them, they might cheer up too.

Figure 3 is a 10x16 ft. house in which the four Spokane Langshans are housed. The wire screen, on birch poles above front roof, was put on to prevent birds flying up on the roof when house was used for chickens. The wire really should be removed in winter as it serves to hold snow on roof; yet, it will be noted that the snow on this roof amounts to very little. It sure is a mighty "cheerful place for fowls." This house is 4 ft. 4 in. high in front; 9 ft. at peak; monitor is 3 ft. 6 in. high and has two windows about 2 ft. 4 in. square; back wall, 4 ft. 8 in.; low part of house is 6 ft. deep and high part 10 ft. 4 in. deep. Usually it accommodates a flock of 40 fowls.

Figure 4 shows a house in the woods used for S. C. White Leghorns; it is a 20x20 ft. house. The birch poles at front of this house support a high screen of 2 in. mesh poultry wire to keep Leghorns from flying out of yard. The leaves which blew in at bottom of this wire screen were not cleaned out last fall and this roof shows the most snow we have seen on one of these houses. However, you will note that the light is not shut off from monitor windows and that it wouldn't matter a great deal if it was. The cockerel standing in front of house is not as high tailed as he looks in the picture, as he was just getting ready for a cheerful crow when we snapped the camera. He is half American and half English blood. Anyone who thinks that this house was not a cheerful place for fowls should have heard these birds sing while we were taking the picture. Some concert, believe us.

Figure 5. A view on the shore of Old Forge Pond at The Anchorage Farm. The small house at left is a Tolman open-front and the large one is a Woods' 10x16 ft. Used for surplus sales stock in winter and for growing chicks in summer. (See article "Cheerful Places for Fowls.")

FIRST PRIZE COCK, PALACE, NEW YORK, DEC. 1915
HOMESTEAD CAMPINE FARM, WAYLAND, MASS.

This house is 20x20 ft. 8 in.; it is 5 ft. high in front; 10 ft. high at peak, of which 3 ft. is monitor with four windows; 5 ft. high at back wall; low front part is 8 ft. deep and high rear part is 12 ft. 8 in. deep. Eighty yearling hens and 4 big cockerels wintered in this house and gave fine results. The house will accommodate 150 Leghorns if necessary.

Figure 5 shows a portable type Woods' house and a small open-front Tolman house. Both of them appeared to be "cheerful places for fowls," altho located near the pond where they get the full sweep of the prevailing westerly winds off the lake and all the wind that blows from Northeast and Southeast. In summer these houses are used for growing stock and at time of picture taking held surplus sales stock. At present writing they are housing hens with chicks. The Woods' house here shown is 4 ft. 4 in. high in front; 7 ft. 9 in. high at peak, of which 2 ft. 9 in. is devoted to the monitor; back wall 4 ft. 6 in. high; low front section 6 ft. 4 in. deep, high section 10 ft. deep. Accommodates 40 adults or three times that many growing chicks. "Cheerful places for fowls?" We consider them so.

Prof. E. A. Burgess, the new head of the poultry department of the Michigan Agricultural College, does not believe in teaching poultry husbandry from text-books entirely, and for the first time in the history of the college, the students are being put directly in the field, caring for the poultry, while the more advanced students have been set to work building modern coops and chicken runs. Prof. Burgess believes in practical instruction.

Tom McCarey, prominent in the sporting world for the past fifteen years as a promoter of prize fights, has quit the business for good and has gone into the poultry business at Los Angeles, Cal. He is breeding S. C. Rhode Island Reds and has his male birds named after famous prize fighters. His favorite—the biggest and best bird in the flock—he has named "Jess Willard."

A poultry department has been added to the Oklahoma School for the Blind at Oklahoma City, and the students will be given practical instruction in poultry culture, altho most of them are totally blind.

Reasons for Selecting My Variety

This Article Won the \$25 Cash Prize Offered by
Chiles & Company, Mt. Sterling, Kentucky, in Their
Standardbred Contest. *By P. H. Grigsby, Gloucester, O.*

MY REASONS FOR BREEDING the Barred Rock are, in the order in which they appealed to me, entertainment, beauty and the difficulty of breeding high class specimens.

When I first took up the breeding of high class poultry, my occupation was that of stationary engineer, hoisting coal at a coal mine. This is a work which is very steady, monotonous and nerve-trying, and it was as a means of relaxation for evenings, holidays and Sundays that

I started back-lot poultry keeping. I have found it to be fascinating, healthful, entertaining and profitable. It is especially conducive to the health of a man and

more to the true fancier than the entire profits from a utility flock for the whole season.

I regard the exhibition of birds a little differently, perhaps, than some do. To me it is not the birds that are on trial, *but their owners.* When we exhibit our birds we place the results of our skill, thought, experience and labor in competition with that of our fellow exhibitors. And the victory shows who has learned the most, studied the deepest, and worked to the best advantage. It is not the strain that gives the victory, but the man behind the strain.

As to the beauty of the Barred Rock, they are second to none, being always bright and clean looking and with their uniformity of type and narrow ringlet barring, they are a feast for the eyes either at home in the yard or on display in the show room.

The ideal color of a Barred Rock is hard to describe. In fact it cannot be accurately described in words. It must be seen to be appreciated. The Standard calls for light and dark bars of equal width. The light bars to be grayish white and the dark bars stopping just short of positive black. Now there are several shades of grayish white, also several shades of black and they are very confusing to the amateur. It is hard for him, many times, to get the proper shades of color fixed in his mind. At first a bird with sharply defined black and white barring looked good to me, but I soon learned it was not what I wanted when I saw one with that grayish white color crossed with regular soft black bars extending to the skin—a thing which is difficult of attainment with this shade of color.

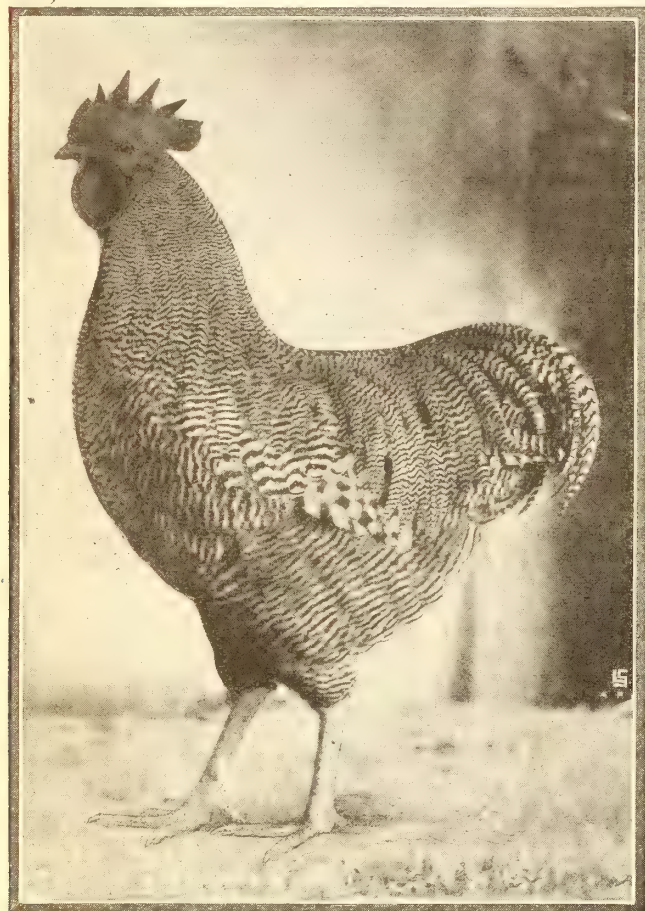

The Standard type of the Barred Rock I consider the most beautiful of any of the Standard breeds of poultry. When we produce a bird approximately close to the Standard description, with its bluish appearance (when viewed under certain light conditions), yellow legs and beaks; bright red eyes, comb and wattles; giving it a gay contrast of colors, we have, in my opinion, the most beautiful Standardbred fowl on earth. When I stand contemplating such a specimen, I can only express my feeling in the words of the poet:

"A thing of beauty is a joy forever;
Its loveliness increases; it will never
Pass into nothingness."

My third reason for selecting this variety is the interesting problems of breeding to be met and overcome. This is a variety where like does not produce like and many factors enter into the problem of mating. Practically all exhibition Barred Rocks are the product of the double mating system. This requires a second mating to produce males of exhibition color and vice versa. It is not necessary to go into a description here of the methods employed, as it has so frequently been described in the poultry press.

There are many points to be considered in mating to produce high class specimens. Line breeding to a certain extent is necessary and good judgment should be exercised in making the matings. Defects must be avoided. Color is a point that requires the most careful consideration. Birds with a brownish tinge, brassiness, weak or smutty undercolor mated with like defects will reproduce these defects in the offspring.

The best plan is to use fewer birds and mate only the best you have rather than to try to counteract defects in one bird by strong points in another. The proper blending of colors to produce good exhibition birds can be learned only by experience. Most important of all, the breeder must know the lineage of his birds for several generations back or all his calculations may be upset. One breeder cannot, as a rule, successfully mate another's birds, unless he has been intimately acquainted with them for several generations. So in conclusion let me say, I breed Barred Plymouth Rocks for their beauty, for the problems connected with their breeding and

A Boston, 1916, prize winning Barred Plymouth Rock. Owned and exhibited by Grove Hill Poultry Yards, Box 555, Waltham, Mass.

woman whose work compels them to remain indoors during working hours, for in the morning one arises earlier and spends a short time in the fresh air before breakfast in attending to the flock and the evenings are generally spent out of doors in the same way.

I have made it a point to make careful matings in my pens and I make some small matings experimentally, carefully marking each egg and chick, so I know the exact parentage of each. It is a source of absorbing interest to me to watch the results of each mating from the time the first chick feathers appear thru the different stages of feathering and development until the bird is fully matured and conditioned ready for the show room. Then comes the supreme moment—the thrill of victory of winning the ribbons, which is worth

the satisfaction of solving them and producing prize-winning specimens.

I have tried many forms of amusement to while away the time outside of working hours; the ball room with its simpering dudes and empty-headed butterflies of fashion; the gilded saloon with moments of exhilaration and resultant headache; the theatre and now more generally patronized "movies," as well as many other forms of amusement, but they all pale to insignificance to the genuine enjoyment which I derive from the time spent with, or in the interests of my flock of Barred Plymouth Rocks.

How I Produced and Prepared 1915 Exhibits

This Article Won the \$10 Cash Prize Offered by Chiles & Company, Mt. Sterling, Kentucky in Their Second Prize Contest.

By Louis C. Gercke, Augusta, Ga.

AFTER HAVING BRED mongrels for a number of years, I decided to invest in thoroughbreds. In the spring of 1912 I bought from a local breeder of S. C. White Orpingtons five pullets and one cockerel, four months of age, paying ten dollars for same. These grew to maturity and the following season I bred and raised from them about thirty youngsters. Having then developed a greater interest in poultry, in the fall of 1913, I decided to visit a poultry show so that I might figure out how my birds compared with those on exhibition. There is a saying that "comparisons are odious" and it is probably not necessary for me to state that it did not take me long to discover that my birds were culls when compared with those I saw at the show. I had a talk with one of the exhibitors while there and took his catalog home with me.

The following March (1914) I sold nearly all the birds that I had on hand for twenty dollars, and bought from this dealer a sitting of fifteen eggs, paying him fifteen dollars for same. From the chicks hatched from these eggs I raised two cockerels and three pullets, and the following fall I wanted to exhibit the birds at the local show, but I did not. My nerve failed me, I think. Anyway I had the courage to ask two breeders who had bred and exhibited birds for a number of years to come down and take a look at these five birds. After looking them over, they were quite excited about one of the cockerels, paying him all kinds of compliments and said that a bird of his class would cost a hundred dollars from any of the big breeders. I have never been able to tell those men what they did for me, but of this I am sure—they instilled more enthusiasm in me over the birds than in anything I have ever known.

At the local poultry show that fall I subscribed for three poultry magazines and I never invested money better at any time before or since. Every month when they arrived, I went thru them from cover to cover, advertisements included. And what a help they were to me! Each month their timely suggestions helped in many and varied ways. I feel that the great advances made in the poultry industry are largely the result of the clean, constructive work of the better class poultry magazines.

In January, 1915, out of the five birds I had on hand, I discarded one of the cockerels and one of the pullets on account of white in lobes, and bred from the best cockerel and two pullets. I made a close study of my birds and the eggs laid by them and soon learned to distinguish the eggs laid by these two pullets and set them separately. When the chicks from these eggs hatched I toe-marked them, that I might make no mistake in selecting the next year's breeders.

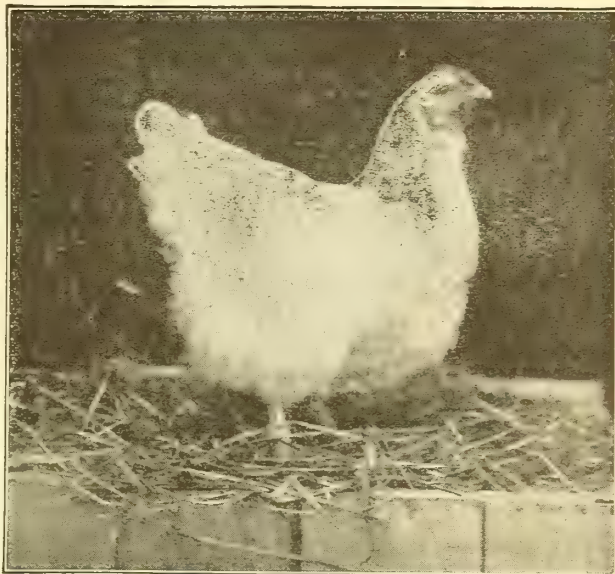

From the three birds, I hatched and reared twenty youngsters, and as the poultry magazines say, "Kept them growing" and did not forget to "watch for lice." I fed the chicks steamed oats dried down with corn meal, table scraps dried down with bran, a patent food with beef scraps, as well as corn, oats, and wheat fed in a litter. I never saw chicks grow better or develop more uniformly.

By fall, having watched their gradual development of beauty

in form and feather, thru the summer, I had gotten my nerve worked up to the point of entering them for exhibition at the fall show. A month and one-half before this time, I picked out fourteen birds that I intended to exhibit and these I put in training coops and started training and conditioning: I weighed every bird, and those under Standard weight I put on a fattening diet, also gave them a lesson every day in posing. Some of them took to the posing like ducks to water, others were a little wild at first, but before long I had them all so they would pose nicely.

There was one cockerel in particular that was an extraordinarily good one, except that his weight was not quite seven pounds and his comb was undeveloped. This bird I put on special diet, kept beef scrap before him all the time and gave him the best of care. This bird weighed eight and one-quarter pounds when he went into the show room—and won first in a class of fourteen. Two days before the show I had washed all the birds, just as I had read in the poultry magazines to do, and I made it a point to do a "jam up" job.

These birds went into the show room in tip top shape and in a class that was the second largest in the show, eight exhibitors, five from our local town and three from the state at large, making in all a class of one hundred and seventeen

A White Wyandotte hen with a trap-nest record of 233 eggs in one year. Owned by J. C. Fishel & Son, Hope, Ind.

White Orpingtons. I won as follows: first and fourth cock, first hen, second cockerel, first and second pullet. I was awarded first on pen (nine pens entered), but on protest from the other exhibitors my pen was disqualified because one point on one of the hen's comb lopped a little too much. I also won ten dollars for the best display of White Orpingtons and a fifty-dollar loving cup for best display all Orpingtons.

I quote from the *Augusta Chronicle* of November 10, in which the opinion of Judge Wolseiffer in regard to the exhibit is given: "Mr. Wolseiffer praised the White Orpingtons. He mentioned particularly the display of this breed by Louis Gercke of Augusta. One of Mr. Gercke's hens was awarded first prize, and Mr. Wolseiffer declared she is in the class with those shown at Madison Square Garden."

Directly from this show I sent a string of birds to the Columbus, Ga., Poultry Show, and in a class of seventy I won first cockerel, first hen, five dollars for second best hen in show, besides many thirds and fourths, every bird being placed. I made a mistake in exhibiting in the second show right on top of the first, as my birds should have been washed again. However, for a beginner I think I did wonderfully well, and am perfectly satisfied.

In summing up, I would say that I attribute my success, first from buying eggs of good stock from a thoroughly reputable dealer; second from the excellent points and reminders that I received from the poultry magazines, and third from attending strictly to the little details of the business.

Sex Control in Poultry Breeding

CHAPTER II—Some Results of Experiments. *By Herb E. Sharp*

Copyright, 1916, by Herb E. Sharp and Prince T. Woods.

IT MUST BE APPARENT that any experiments along the line of sex-control must be conducted with some form of animal life whose span of life is sufficiently short to afford the observer ample opportunity to study several generations and to compare the results of each with the others, if he is to arrive at any reasonably accurate conclusions.

Among cattle it will be found that it takes practically twelve years to record the life work of a single individual, while to secure accurate records for, say, three generations would require approximately thirty-five years, and a longer period might become necessary, so that human life itself is all too short for one to confine his observations to cattle only, where this subject is to be discussed.

Under these conditions a cow and all her daughters would have to be remarkably persistent, and show a wonderful preponderance of one sex over the other in order to attract the attention of the most watchful attendant, or even the most careful cattle breeder.

With domestic fowls we not only have the advantage of a shorter span of life, but where the cow may raise ten calves in her twelve years, the hen may raise twenty—and sometimes thirty—chicks in a single year, and it is within the range of possible production for a hen to produce a hundred chicks during her life time. This gives us opportunity to observe one hundred times as much in five or six years with fowls as is possible with cattle in twelve years. Then, too, twelve months after mating our hens, we have the developed progeny to show us the results of our matings and to point out our errors.

Bearing these things in mind when we begin to look for

inherited characters, we find that evidences of this inheritance must be more readily apparent with fowls than with cattle, and any study of the question under discussion must give due consideration to the powers of hereditary influences.

Many a cow has been known to produce calves all, or nearly all, of one sex, and can we intelligently consider this question without asking whether or no the daughter of such a cow might not follow, more or less closely, her mother's record by virtue of inheritance?

In the spring of 1912 we mated twelve carefully selected, strong, yearling hens to a magnificent two-year-old cock bird, and prepared to mark the eggs as laid and the chicks as hatched, so that we could not only make a definite report as to the pen, but also of each individual hen,—our sole object was to secure definite information and the experiment was made with open mind.

There were 26 chicks from one of these hens and all cockerels. They were all disposed of, as was also the hen. For purposes of observation it would have been the part of wisdom to have retained her and some of her sons, but our interests seemed to lie in another direction.

There were 30 chicks from another hen and these were all pullets. We gave this hen a band number 100 and retained her, as well as some of her pullets for our future breeding work.

The chicks from the other hens were divided as to males and females in about as many different proportions as it was possible, running the whole scale from one extreme to the other, and so far as we could tell, no two of them were performing in a uniform manner.

With these records before us we promptly decided that if the male had exerted any influence over the sex of his progeny, whether by virtue of his greater strength, or for any other reason, then some two or more of these hens would have shown a degree of similarity in the proportions of the different sexes, as this was not apparent we gave up all hope of ever discovering the secret.

The hen No. 100 was an unusual hen in several ways. First, she was larger than any of the others for her age. She had as nearly perfect form as any of the others and apparently a little better length of feather. She was just as active, or possibly her length of wing was to her advantage and she did not hesitate to make use of it on any slight provocation. Her eggs were larger than those of the others and we thought a trifle more uniform. Her eggs were of a well rounded shape and might have been criticised for that same; for, at times, it was difficult to distinguish the large end from the small. In color they were all that could be desired, being rather richer than ordinary in the deep brown for which Black Langshans are famous.

When her chicks hatched out they seemed to have a slight advantage over the others in size, and they never lost that start, but fairly jumped into their new feathers, and little wings and long tails soon had her chicks so plainly marked that they were readily distinguishable from the others in the flock.

Considering all these points, we decided to place a son of that hen—if we could secure him—at the head of the first pen. For the next season our chief aim was to secure a son of hen No. 100. To accomplish this, or as near it as possible, we mated One Hundred back to the same old bird that we had used the season before, we called him "Champ" and he was a champion if there ever was one. We also gave him five of the best daughters of One Hundred, thus he was mated to his own daughters.

Most of the chicks were dressed for market as fast as we could make certain of the sexes, the records being kept accurately. Right in the middle of the season Champ, fighting through the fence, hooked a spur in the wire nearly three feet off the ground, and, his great weight was too much for flesh and blood, the left thigh was thrown out of joint at the hip. For nearly twelve months we labored over the old

GOLDEN CAMPINE
bred and owned by
GENSEMER BROS. CRESTON, OHIO.

soldier, keeping him alive for the sake of securing a cockerel, the son of One Hundred.

The records showed that fall that One Hundred had given us 18 chicks, and again all were pullets, but from her daughters we had 75 chicks and these were all pullets but two. We now had a cockerel that was one-fourth the blood of One Hundred and could use him in case Champ was not fit for service.

Now we had five pullets doing as their mother had done in the matter of sexes, and we were led to suspect that the trait might possibly be inherited. This tempted us to go further into the question of sex control.

As the breeding season came on again we planned to go further than ever into the question of sex control, and again we placed Champ at the head of the same old pen, One Hundred and her five daughters. He was in almost constant agony from the injured hip and we kept close watch on him, and carefully developed the best one of his sons to take his place if it should be necessary. He seemed to understand that there was important work for him to do and for days he led his little flock as proud as ever, tho he never seemed to notice the younger hens. He and One Hundred had been such close mates for so long that they were never far apart. Soon after she began to lay the old fellow began to fail. He seemed to lose courage, then gave up altogether and in a few days he was gone.

We immediately placed the cockerel in the pen, but he was young and immature and the eggs from the young hens proved infertile till later in the season. From One Hundred the eggs showed some fertility, but no apparent vitality save for just one egg. This egg is entitled to description, it was much longer than the others had been and, instead of being the same size at both ends, it tapered to a small point, this shape was very pronounced, yet in size the egg was as large as any, if not larger than any other she had ever laid.

That egg hatched, the only one of her sitting to show real vitality. We had called it our "\$1000 cockerel" to the amusement of our callers. But when the season was over, and we could again total accounts for the year, we found that One Hundred had given us 12 more daughters, these from her own grandson, and the "\$1000 cockerel" from old Champ; we promptly dubbed him "Young Champ" in honor of his noble sire.

At the close of the season of 1914, One Hundred had given us a total of 60 pullets and one cockerel in three years, and had lost a large part of two seasons, by reason of the accident to her life mate.

That cockerel hatched four full days before another chick was due, nights were chilly, the hen could not be trusted with a spark of life as valuable as he was, and a spark of life was all he was. So we fitted up a hot air brooder, *one chick size*; it looked like a five-pound lard pail with a kerosene lamp under it, but it did the work just the same, and today that big massive breasted fellow out there in the yard is the same little spark of life, even if he does not look it. The eggs from the younger hens brought us no males and the number of females was not recorded.

In the season of 1915 we mated Young Champ to his own mother One Hundred, three of his sisters and two of the best daughters of One Hundred and her grandson. The older hens have all maintained their records creditably. No. 31 and another daughter No. 41 have never yet produced a cockerel, but they must have, if their records were complete, not less than 40 chicks each to their credit, as we have sold a good many of their progeny. The two younger daughters have given us a very nice year's work, showing, for the two birds, a total of 39 pullets and 7 cockerels. The two older daughters have given us a son each for this year, while the number of daughters is in the neighborhood of 20 each for the season. Back of all this lies the fact that Champ and One Hundred were closely related, having come to us from flocks that had sprung from the same pair of fowls, and had come by way of much, rather less than more, intelligent inbreeding.

This was a great array of indisputable evidence, for to me this evidence is indisputable. The records had been kept by myself and the work was done either by own hands, or by the hands of a faithful and devoted wife, or at most an equally faithful sister; and we know that our records are cor-

rect, as only the small breeder can know the correctness of his records.

Facing this evidence, and knowing it to be correct, could any intelligent man question that sex tendencies are transmissible? Having started to test out one theory, had I not fairly well been shown another?

Two of the daughters of One Hundred were mated to a son of Champ by another hen and from this mating we have raised a very substantial number of chicks, tho we have sold many of their eggs, and there has been no attempt to keep either pedigrees or records, as there is a limit to the amount of this kind of work that can be done, yet the eggs from this pen, and their descendants, have given us very uniformly more than twice as many pullets as cockerels. Champ and One Hundred, being very closely related, must have carried about the same blood elements, characters, etc., hence if there is anything hereditary in the production of an unusual proportion of either males or females, they must both have carried the same elements, as it was this fact that really made him the great mate for her which he showed himself to be.

If there is any such thing possible as the sire influencing the sex of the progeny, then the same sire could not secure all females from one hen and at the same time all males from another.

If there is any such thing possible as the relative strength of the parents influencing the sex of the progeny, then we could not secure the same results, year after year, from the same hens, even tho we change the males.

If there is any such thing possible as the vigor of the male exerting an influence over the sex of the progeny, then Old Champ never would have produced all males from one hen and all females from another, when he was in his prime—and there have been few more powerful birds than he was—and then, when in his weakened condition, after a year of pain and suffering, produce a single chick, and that a cockerel from a hen that invariably gave him females when in his prime, and did the same with two other males subsequently.

If the relative number of females to the male should exert an influence over sex of the progeny, we cannot explain the fact that Champ produced all males from one hen and all females from another, when mated to twelve hens; then when the flock is reduced to five females, the chicks are practically all females; yet, when he, in his crippled condition, refuses to pay any attention to but one hen, he produces her first male.

This son, in his first year, and being mated to only five hens, has produced some 86 chicks and only nine of them are cockerels, or approximately 90% females.

If the age of the ovum at the time of fertilization should affect the sex of the progeny, why should two hens, running at large with the same male, produce such directly opposite results? Would they not be likely to be paired at about the same period of time in the passage of the ovum, for both? Would it be physically possible for one hen, and her daughters and granddaughters to go thru life all doing about the same thing, by having the ovum fertilized at exactly the same relative time in its passage, save on the rare occasions indicated by the one time in 60 or twice in 75, when we consider that a single pairing of the birds is sufficient for the fertilization of a comparatively large number of eggs?

If the male could control the sex of his progeny, in any degree, we never could find two females that when mated to the same male one would produce practically all males, while to the other would produce practically all females; but we would find a practical uniformity in the progeny of all females mated to the same male. This has never been found, where the females were not closely related to each other, either in poultry or cattle.

If the female controls the sex of her progeny, without regard to any outside, or we may say, foreign influence whatsoever, we see why all these phenomena, we see why one hen will produce all males and another all females when both are mated to the same male. We see why, when a female produces largely one sex, her daughters may be expected to repeat the performance, unless the sire has been from a family of opposite tendencies.

If we have an established trait, and bring in a sire from some other flock, how can we know whether he is going to build up or tear down the character we have sought to establish? Only by careful examination of pedigree and records

of the females shown therein,—for it is safe to reason that close relatives carry identical characters, while birds or animals not closely related may be viewed with suspicion,—for even tho the records may be practically identical, or very nearly so, we may set up such conflict that all fixed characteristics may be practically destroyed; White Leghorns and White Wyandottes are the same color, but if they be crossed we are sure to destroy a great many of the characteristics of both breeds and it is not at all certain that white fowls will be the result of the crossing.

Any trait or character, or mark, that is common to two or more closely related specimens, such as father and son, mother and daughter, or two brothers or sisters, may safely be considered as having hereditary value. Indeed among cattle breeders if a calf show a spot that is even slightly in resemblance of one carried by sire or dam, it is readily given a value as an inherited mark.

If a hen lays 300 eggs in a year, and her daughter should be given only half as much feed, obviously she cannot lay 300, and probably will lay less than half as many eggs, hence we see that the number of eggs a hen may lay does in fact depend more on the feed given than upon any laws of heredity; but if a hen is black, and her daughters be given less than enough feed to sustain life, the color will remain—for all practical purposes of illustration—even tho she be starved to death, the color then is inherited.

Now, if our records show not how many eggs may have been laid but how many were set, and what percentage of the hatch were males and what percentage were females, and we find a hen that is giving us a large proportion of one sex over the other, this percentage will probably remain the same whether the hen be well fed or poorly fed, we have a trait that is probably interited, and one that may be transmitted to the next generation, if we but use intelligent care in the selection of the mate.

In the case of hen One Hundred, and her daughters and granddaughters, we have an example where all females tested showed a very uniform percentage of males and females, chiefly females, which cannot be explained under any other theory save that of inheritance, and it would be next to impossible to select either the hen or the eggs that would produce a similar result under any other theory of sex control.

The number of eggs laid in a year, the number of pounds of butter or milk a dairy cow yields, all are somewhat dependent upon the quality and quantity of the feed given and so are not truly governed by the laws of inheritance; but the capacity to consume, and to turn to profitable account, large quantities of feed, is certainly an inherited character, and as such can be developed by breeding.

The color of the eggs is generally conceded to be an inherited character, and daughters will be found laying eggs similar in color to the eggs of the mother, and these characters will be transmitted thru the son to his daughters. We have the Leghorns and Minorcas that are expected to lay white shelled eggs, because the breeds have inherited that color from their ancestors. Certain other breeds are expected to lay eggs of different colors, buff, and brown, and they have inherited these colors.

Is it impossible that a hen whose eggs are largely of one certain shape, as for instance short and round, should transmit this trait to her daughters? If so, how are we to develop a strain, or breed, that will give us eggs of any uniform shape? In the case of the hen One Hundred, her eggs were nearly all short and round, so were those of her daughters, as were those of her granddaughters; so here again we have some evidence that this trait was transmitted. It is readily recognized that if a hen persistently lays a short round egg, the mating with a male from a hen that laid a long slender egg would not alter the shape of the eggs laid by the hen. If a hen were normally laying brown eggs and we mate her with a Leghorn male, that would not alter the color of her eggs.

For several years, even before taking up the study of the subject of sex control, I had, in a superficial manner, been watching the relations between the shape of the egg and the sex of the chick that might be hatched therefrom, and as a boy had heard the old assertion made that all pointed eggs produced males, while all round ones produced females, and have been told that I knew little about fowls if I did not know that much. I call to mind one young fellow who could tell

the sex of the chick by simply glancing at the shape of the eggs, and he proudly showed me two thousand eggs just going to his incubators, "not a dozen cockerels in the wagon load, I betcha!" His hatch produced a trifle over 50% cockerels.

After carefully comparing 25 to 30 eggs from one hen, I have marked the chicks from those few that were long and slender and found them producing the few cockerels that have appeared, and am of the belief that when we find a hen whose eggs are very nearly uniform, with a pronounced disposition in either direction, that the few exceptional eggs will bear some relationship to the sex of the chick contained therein. I am not at all certain that this will be found to be always reliable, but I have found some indications that there is some indefinite relationship between the shape of the egg and the sex of the chick that may be hatched from it.

If this be true, in ever so slight a degree, then we can readily see that the hen must in some way control the sex of the chick, for the fertile eggs and the sterile eggs from the same hen will average to carry about the same relative shapes, and as the male cannot alter the shape of the sterile egg, then, as they carry the same proportional shapes, he cannot alter or influence the shapes of the fertile eggs, and by virtue of whatever slight relationship there may be he cannot control, affect, nor influence the sex of his own progeny that hatches from those eggs.

If the hen controls the sex of her progeny, then this principle must run all thru nature; the cow must control the sex of her calves, the mare must control the sex of her colts, and so on thru the entire list.

If the female controls the sex of her progeny, then the female with a strong disposition towards a high percentage of either sex, must also have some power to transmit the same to her daughters, and thru her sons to their daughters, in exactly the same manner that all other inherited characters are transmitted from parent to offspring.

If those who claim the inheritance of high fecundity, could point to only one hen with a record of production of, say, 300 eggs for one year, that had produced one daughter with a like high record, or with a son that from all his daughters could show just one with a similar record, they would hail it as absolute and positive, irrefutable proof of the power of the laws of inheritance,—they would not ask for two daughters or a whole flock of granddaughters to prove their claims.

We have shown the work of one hen whose progeny were 60 pullets and one cockerel, and whose daughters and granddaughters, so far as we have been able to keep accurate records, have all produced uniformly more than 85% females, and we claim that this is evidence of the fact that *sex tendencies are transmissible*, a disposition to produce 90% of one sex may be inherited by the progeny.

Where we have a black hen and mate her to a white male, we do not expect all the chicks to be either black or white, but some will be one color, while some will be the other and some will try to be both, so if we have a hen that comes from a family producing nearly all females and we mate her to a male from a family producing nearly all males, we need not expect to preserve either family, and will probably destroy both. We have crossed two distinct lines as truly as tho we had mated Wyandottes and Leghorns, or Jerseys and Holsteins.

Whether the descendants of hen One Hundred should fail to maintain her record in the future or not, they have revealed the true principle by which the sex of unborn generations is controlled, and this principle can be applied to every form of live stock, where man may select the matings, and it is possible to develop, by judicious care, families or strains that will regularly give their owners a high percentage of either sex that may be desired.

The first requirement is pure blood, that inbreeding may be carried on indefinitely, without danger of reversion to some long forgotten and discarded type. This purity of blood can only be found in those forms that have been developed from wild forms without resort to crossing two or more forms.

Many characters are seemingly possessed by some individuals, but the power to transmit them to their progeny is lacking, they have not the required prepotency to stamp their characters on the next generation, and no doubt females will be found that apparently show a desirable sex tendency, and will then fail to stamp that on their progeny. Such females,

by their failure, do not prove that sex tendencies cannot be inherited, they only serve to prove their own weakness.

When one is found that not only has the tendency, but has with it the power to pass it on to her progeny, so that her daughter also shows the trait, she is a jewel and her blood should be preserved.

The preservation of the blood of such a female may well be a work requiring both time and patience, as well as intelligent care, and this was shown in the case of One Hundred, when it required three years of exact precision and the most desperate kind of care to secure her first son, and by just the width of a hair we would have lost the entire line by losing her life mate before we secured the son.

The last egg ever fertilized by Old Champ, was the first son of that hen, and of all the eggs she has laid since then there is not one yet to produce a second son.

No other male within our knowledge was a fit mate to One Hundred and today with Young Champ, and nine of his sons

(Next Chapter will discuss "Physiological Causes.")

on the place, of all of them there is only one bird we really would care to risk to mate with her, that is Young Champ and he is her own son. He is most like her and of course the strongest in her characters and blood lines.

The figures are from our own records and as we may be, to some extent, interested in exploiting the discovery, perhaps too much credence better not be placed in these statements until something further has been presented, but in the records of other men, records that have been kept as authentically as is humanly possible, without regard to what they might show, we find some corroborative evidence that is not subject to any such restrictions.

From records that are semi-public property, and have been kept openly for years, we take pleasure in presenting such portions as may have a bearing on the question, giving sufficient in each case to show the actual trend of affairs, and welcoming any criticism that may be made, we hope to make the case complete.

Poultry Yard Pointers for May

Fresh Air for Hens in Summer—Egg-Eating Among Hens—Fattening Cockerels for Market—Pens for Growing Chicks.

By Maurice H. Decker

THE MAIN THOUGHT in the mind of the poultryman who is planning a new hen house, seems to be that of constructing it in such manner as to keep his fowls warm and comfortable during the severe weather of the winter months. Means for the provision of fresh air and ample ventilation at all seasons of the year are usually second in importance in his mind when in reality and to be consistent with practicability they should hold first place in his consideration. Vigorous, healthy fowls seldom suffer from cold as long as they are protected from draughts and are

well fed, but there are numerous flocks which suffer intensely during the hot sultry days of July and August when housed in buildings built to exclude the cold and chill of winter. A very good illustration of the difference in the amounts of ventilation needed at different seasons of the year may be made by reference to your own sleeping room. During cold zero weather you obtain plenty of oxygen by lowering a sash half way down, but in mid-summer you find it difficult to be comfortable with all the windows and the door open. The right way is therefore to design or remodel all poultry buildings with the view in mind of providing the maximum of comfort at all seasons and not with one idea of guarding against the maximum of winter's temperature.

Lack of air currents, its different density, high body heat of the fowls, the fumes from their droppings, which are usually frozen in winter, and the fact that hens are many times doubled up to gain extra room for chicks, are all good reasons why one should pay particular attention to the housing of his poultry in warm weather. Consider for a moment the condition of the air about the heads of fowls roosting in the rear of a building twenty feet deep which is tight upon three sides and depends upon the openings in its front only for ventilation during the hot summer months. The worst case of roup I ever saw in all my experience was contracted by a Barred Rock hen in a crowded tightly built house in the month of May and I doubt not but many cases of disease, getting out of condition and slackening up in egg yields in the early summer can be traced directly to a lack of proper air circulation. At the first evidences of warm weather, every poultryman should test out his buildings thoroly to discover if his fowls are receiving a sufficient supply of oxygen at night. This may be done by entering the house after they have gone to roost and if the air is heavy, close, strong and offensive to the sense of smell, steps to correct these conditions should be taken immediately. Breeding stock in particular should receive one's most careful attention in this particular. A breeding

fowl is usually carefully cared for the year thru for but a few months' service in the hatching season, and unsanitary, unhealthful conditions will defeat the poultryman's purpose and result in weakly debilitated chicks which quickly fall the easy prey of disease and sickness.

The proper and ideal place for breeders and layers, too, when the weather begins to warm up, is out of doors the entire twenty-four hours. They will lay better, the eggs will hatch better and their health be better if they are allowed to roost in the orchard or shade trees. Fowls that for obvious reasons must be housed the year round, may be kept comfortable by providing not more than three runs of roosts (two would be better) and by moving these up close to the open front or opening rear ventilators of ample proportions. I have yet to discover a long laying house sixteen to twenty feet deep of the shed or hip roof design that will furnish enough fresh air in warm weather without openings in the

One of the many high-class breeding cockerels on the Rosedale Egg Farm, Port Huron, Mich.

rear wall. Some of the Experimental Stations have developed types of construction which embody a sealed roosting compartment and a long narrow ventilator under the eaves of the building, but in my mind there is nothing that equals good sized square openings two and a half to three feet in size for letting in fresh air around the roosts. These can easily be rendered draft proof for winter use by tacking over them pieces of prepared roofing either upon the outside, or the inside, or both. Colony houses are more easy to ventilate, as they are not usually so deep as laying houses and generally possess side windows. One hundred growing chicks in an 8x8 ft. colony house will require more air than fifteen hens in the same building and no more should be allowed to roost in one flock no matter how open the construction. We have found the best way to ventilate small brooders in warm weather is to make a wire netting frame to fit inside the top and then raise the roof four to six inches. This allows the heated air to pass upward and outside in a natural manner.

Geo. Rudy, of Mattoon, Ill., showed a fine string of his White Wyandottes at the Greater Chicago Show. The above illustration shows one of his winners.

Egg-eating is a habit that annually causes serious losses to poultry raisers in every community. This trouble is a very common one in the poultry yard and spreads rapidly among the flock if, as is usually the case, it starts with one individual. Once the habit is firmly established, it is a very difficult one to break up and usually the only efficient remedy is to kill or dispose of the entire flock. There are a number of conditions which cause this abnormal craving or appetite, the most common being a lack of range and exercise, broken eggs caused by fighting hens, freezing or by being dropped upon the floor from the roosts at night, rations lacking the necessary animal mineral, and green food elements and by the feeding of egg shells in whole or partially crushed form.

Egg-eating and its kindred vice, feather pulling, are of rare occurrence in flocks supplied with ample range, an abundance of fresh growing green stuff and a well balanced ration. Close confinement and the resulting lack of exercise are ideal conditions for breeding this unprofitable habit and the most efficacious remedy lies in its prevention rather than its cure. Laying hens should therefore be supplied with a reasonable amount of range, their grain fed in deep litter or in automatic feeders to keep them busy hustling for their meals,

oyster shell, grit and charcoal should be before them at all times and the necessary animal food, preferably milk or beef scraps and an ample supply of greens furnished. Steamed alfalfa is one of the easiest forms of green food to secure and prepare at all seasons of the year and in addition to its protein and succulent bulk it contains considerable lime in an easily assimilated form. Eggs are rich in protein and mineral elements and if these are lacking in the hens rations her craving for them is liable to start her in this habit the moment a favorable opportunity offers. In cold weather eggs should be gathered frequently to prevent freezing and the nests kept well padded with soft material to reduce breakage. Egg shells fed to poultry should be crushed up fine enough to preclude any chance of their being identified by the hens with whole eggs and care taken that none of the meat remains on the inside of the shells, which in the case of boiled eggs would easily be possible.

There are several cures which may be worth trying if the habit of egg-eating is present in the flock. One of the best is to partition off one end of the pen to accommodate the nests which should be of just the size to hold one hen at a time. By keeping this room and the nests fairly dark and by gathering the eggs at frequent intervals it will be possible to gradually wean the hens away from their bad habits. Another plan is to discover the worst offenders and file down their bills at the end until tender but not enough to cause bleeding. A few china nest eggs are then placed upon the floor of the poultry house for them to pick away at and the regular eggs kept gathered up promptly. Some poultry raisers fill eggs with condiments, such as pepper or mustard or use rotten eggs for the hens to break open, but it is doubtful in my mind if these practices will result in anything more than putting the fowls out of condition for a time and curtailing the egg yield. Hens are creatures of habit, but also of short memory, and if managed correctly and prevented from continuing this vice for a few weeks it is possible for them to outgrow their practice of eating eggs.

* * *

There is no phase of the poultry business that has attained the wide-spread popularity and grown to such enormous proportions as the traffic in day-old chicks. This business embodies the underlying principle upon which all successful transactions must be based—full value and a bargain to both buyer and seller, something that other departments of the poultry industry have not been persistently accused of. Nearly every poultry plant that has eggs and stock for sale is in the market for day-old chick business and in addition there are a number of large plants scattered over the country which specialize in them alone, buying up thousands of eggs from neighboring keepers of pure-bred stock, hatching them in their mammoth incubators and shipping the chicks out over the country to their numerous customers. It is not uncommon for these plants to have an incubator capacity of 120,000 eggs at one setting. There are two favorable conditions which make the shipment of baby chicks just taken from the incubator to distances as great as 1000 miles safe and practical. One is that each chick is supplied by nature with sufficient food (in the form of the egg yolk) to make feeding unnecessary, in fact injurious for from two to three days after hatching. The other is the principle upon which the success of the fireless brooders is based; being that 25 of the tiny little fellows closely packed in one compartment of the fiber board boxes, in which they are shipped, generate enough heat of their own to keep each and every one warm and comfortable until their destination is reached. Chicks are shipped in boxes containing 25, 50 and 100 chicks, the 50 size having two compartments and the 100 size four. The losses during transit are very small, in fact much smaller than one would naturally suppose. The hatcheries usually guarantee safe arrival and full count and place two to three extra chicks in each compartment as insurance against possible loss. Good strong chicks should, however, come thru, even considerable distances, safe and sound, and many times the purchaser upon opening up the box finds he has 105 lively little fellows instead of the even 100 ordered and paid for.

Our largest venture in buying chicks was the purchase of 1100 a few years ago. These came a distance of about 200 miles, arrived in excellent shape, there being only twelve

dead ones in the entire lot, and when they were counted and checked up we found we had 32 extra chicks and were that number to the good. We purchased at the same time one of the then new stove brooders, to care for this flock and later found our investment to be a fairly profitable one, both financially and in the matter of experience gained. These chicks we purchased with the express purpose of raising them to be sold as broilers and when the last one had left the farm they showed the following record:

930 broilers sold for.....	\$567.30
900 chicks at 9c.....	\$ 81.00
200 chicks at 12c.....	24.00
Express	3.40
Feed and fuel.....	266.00
	<hr/> 374.40

Net profit.....\$192.90

If one is experienced in rearing baby chicks he will find several hundred chicks and one of the hard coal stove brooders a very good investment. It is possible to obtain some very good stock at reasonable prices and this can be sorted out and retained for breeders, while the balance, if handled properly, can be sold as market poultry and should pay all expenses of purchase and rearing. I regard day-old chicks as the safest and cheapest means for acquiring a start with purebred fowls, in fact many a substantial business with paying poultry has grown from the purchase of a few dozen chicks. When buying chicks one should not make the mistake of ordering them to come too early in the season. May is the ideal month for growing chicks and even the heavier breeds will mature in time enough to get in a few months winter laying if pushed along and given unlimited feed and chances for development. I recall a case of a poultryman friend who was going to get in on the enormous profits of the early hatched fowl and who ordered a number of Orpington chicks to be shipped in January. When fall arrived he found that when the total expense was added up, including losses, his remaining hens had cost him just five times as much as their eggs would sell for if they layed every day for the next two years. May hatches are not so liable to be exposed to extremes of temperature by Express Agents, who somehow have a disposition for setting them outside if the weather is cold and inside if very warm.

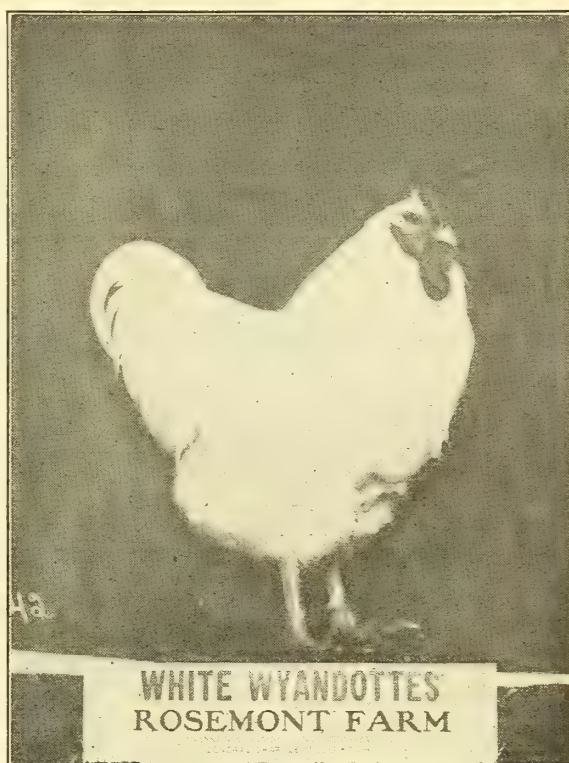

Wyandotte stock is excellent for two to two and a half pound broilers. For such, one should seldom pay over twelve cents, ten would be better. Leghorn chicks are very easy to raise and a good start toward a paying egg business may be made with them. I would rather take a chance with 1000 May hatched Leghorn chicks than with any other sort, for they are especially adapted to wholesale brooding and may be reared with a minimum of trouble and expense. If one wishes to buy high grade stock for the foundation for a quality poultry business, a few chicks of unquestionable breeding, hatched in the favorable weather of this month will prove the cheapest and surest means toward that end.

Since cockerels constitute, as a rule, about 50% of all chickens hatched and are depended upon by many poultrymen to sell for enough money to cover the cost of raising the pullets to laying age, it is but consistent that they be given every possible opportunity to attain the maximum profitable development. Our experience with cockerels has shown that the most profit is realized by selling Leghorn males as soon as they reach the weights of 1½ and 2 pounds, and general purpose cockerels, such as the Plymouth Rocks, at weights of 5 pounds upward. Young fowls intended for market poultry require no different care and attention from the regular broods until they reach the age of six to eight weeks, when they are removed to separate pens and fed for steady even growth. We have found our regular rations for layers to give best results in developing broilers and roasters, which saves us considerable trouble, as we have but one set of feeds to buy and mix. These are a mash consisting of

50 pounds Bran
50 pounds Middlings
20 pounds Beef Scrap
and a grain mixture of
40 pounds Cracked Corn
40 pounds Wheat
20 pounds Oats

but for our market fowls we omit the oats from the grain and add it ground to the mash, which is fed wet, with an equal bulk of steamed alfalfa-molasses feed (mealed alfalfa with 15% molasses). We put the birds in roomy pens with plenty of shade and endeavor to pay particular attention to their health and sanitary conditions of their surroundings. When they are ready to be finished off, instead of moving them to fattening crates and abruptly switching them over to a fattening ration, we leave them in the pens, decreasing the amount of space if necessary and gradually substitute corn meal for the bran in the mash and gradually omit the alfalfa. We also place in the pens beef scraps in hoppers, for protein foods are the ones that put on the flesh and well fed cockerels can generally be trusted to eat sufficient to balance the other feeds if given a chance. During the final week the grain food is left off and the fowls get a twice-daily feeding of the mash, which is now composed of

40 pounds Corn Meal
30 pounds Middlings
15 pounds Ground Oats
15 pounds Beef Scrap.

First White Wyandotte cockerel, Franklin, Pa., 1915. Owned by Rosemount Farms, Franklin, Pa.

A few points to remember are that while broilers are reasonably easy to finish off, the art of promoting a steady, healthy, profitable growth in roasting chickens is only to be acquired after considerable experience. Also that long continued feeding of ground feed alone results in impaired appetites and digestive systems and puts the fowls "off their feed" and causes unprofitable set-backs. The yards in which the fowls are penned should be disced at frequent intervals and sown to oats or wheat, not so much in the expectation of any of it growing, but to give the birds welcome exercise in scratching it out. Plenty of greens must be given and some preparation or combination of mineral elements as is recommended in Dr. Woods' book "How to Raise Chicks" may wisely be included in the ration. Automatic feeders throttled down so as to scatter but a few grains at a time will prove valuable aids in keeping the fowls full-fed but active and expectant. We have found that young fowls grow and fatten more quickly in pens with a cool well-ventilated house in which to roost than when confined in crates. Cold or at least cool drinking water is to be recommended as much as the use of condiments to stimulate false appetites deplored.

"WE LEAD, OTHERS FOLLOW"

EDITORIAL

American Poultry Journal

Entered as Second-Class Matter August 9, 1886, at the Postoffice at Chicago, Ill., under Act of March 3, 1879

65,000 American Poultry Journals for
May, 1916.

State of Illinois, County of Cook, ss.:

G. M. Atwell, president of the Atwell
Printing House, Chicago, being duly sworn,
certifies that the American Poultry Journal
has contracted for printing and binding
65,000 copies of the May, 1916, issue.

AMERICAN POULTRY JOURNAL is
the oldest poultry paper in America. It has
a national and world-wide reputation. The
best writers on poultry matters contribute
to its columns. It receives the patronage
and endorsement of the foremost repre-
sentative breeders of standard poultry and
manufacturers of poultry appliances in the
country.

VIEWING THE MATTER chiefly from the
interest of pure breeds, the specialty
club or breed organization would ap-
pear to be the proper place in which to
develop and make popular priced breed
standards and breeding guides. Their
later acceptance by the American Poul-
try Association, if such course seemed
desirable, might also be matter of more

moment to the specialty club or breed organization
than to anyone else. If the men who develop, pro-
mote, breed, and exhibit a variety are not the proper
persons to recommend how that breed or variety
shall be bred, exhibited and judged, it is difficult to
understand in what way men who do not breed such
pure breeds are qualified to say what the breed shall
be like, what shall constitute exhibition perfection,
what shall disqualify and so on.

We find in American Poultry Association litera-
ture the statement, "There would be no pure breed
poultry business if it were not for the American
Poultry Association. Every bird you sell at a price
above market poultry is due to the American Poul-
try Association."

We wonder if that statement will bear even brief
analysis. We believe that there are a good many
so-called pure breeds of poultry that are not today
"recognized" by the American Poultry Association
in its Standard. Some of them have been vigorously
fighting for admission for some time and have been
repeatedly turned down. Some have been thrown
into the discard after being in earlier Standards and
some apparently are not seeking admission. It
strikes us that the real breeders, thru their own
work and in co-operation thru their specialty or-
ganization, have been the chief factors in promoting

pure bred poultry. We are willing to be enlight-
ened on this subject.

A good many people concede that the Black Lang-
shans are one of the oldest of the pure breeds. It
is even claimed that they were developed and bred
pure in China several thousand years ago and were
for centuries the leading pure breed—if not the only
one—of northern China. No less an authority than
the veteran I. K. Felch says of the Black Langshans:

"The first importation of them to America was
made in 1876, by E. A. Samuels, the ornithologist
of Waltham, Mass., from the Langshan Hills of
China. About four years before this (February,
1872) they were imported by Major Croad of Sus-
sex, England, from the same quarter. Those of us
who were active in poultry culture at that time re-
member the bitter antagonism exhibited toward
them by those breeders then trying to make the
Black Cochin popular. * * * *

"The Langshan Hills of northern China is the
original home of this breed, as it was from there
that the first specimens, sent both to America and
England, were imported. It matters not how fully
one may write of its advent, its history in America
is what interests the readers of today. During the
seven years from its advent to 1883, when at Wor-
cester it secured admission to the American Stand-
ard, its path was a thorny one for any breed—no
breed probably ever had such opposition and prob-
ably none ever had a greater triumph in its accept-
ance. A petition of nearly a thousand names ac-
complished its admission."

When it takes seven years of effort on the part of
the breeders and a petition signed by nearly a thou-
sand of them to secure "recognition" for one of
the "purest of the pure breeds" it certainly is

"going some" in behalf of "every poultry interest."

Undoubtedly some of the fanciers of both old and modern fancy fowl not yet "recognized" can supply a more modern tale that will nearly match this ancient history. We fancy we can recall a few "turn downs" at the more recent conventions. What we do not understand is, why don't the breeders and their specialty organizations wake up and push the cause of their favorites more effectively?

The man who urges "burning questions" might add to his list,—Favoritism and Nationalism, or Fanciership and Fraternalism, which?

SOME SIX MONTHS AGO the American Poultry Association, thru a small coterie of its members, started a pretended house cleaning campaign for poultrymen. Now, house cleaning that is honest and from within, is a good thing, and, as in any other business, there are a good many things in Association methods, in the business transactions of members, in all sorts of poultry advertising and particularly in American Poultry Association advertising (official or semi-official) that could be cleaned up and improved to the great betterment of "every poultry interest." However, honest house cleaning appears to have been furthest from the thoughts of the investigating committee. It developed into a campaign of spurious reform and "purify the other fellow"; particularly the other fellow with little political influence or who does not use large advertising space.

Advertising and business methods — commonly employed by members of the investigating committee, by the Association, and by influential "personages"—considered as merely "harmless statements" and legitimate when employed by "recognized" interests, became—in the eyes of the committee—acts of rank piracy when used by alleged "hucksters," "stringmen" and "57 variety" poultry breeders. Vigorous efforts have been made to defame, revile and ruin such unrecognized poultry breeders and they have been termed "pirates and parasites" and "vampires that live on the blood of honest poultrymen."

It is difficult to understand the "virtue" and "sincerity" of a man, or men, conducting such a campaign and doing the very things that are called dishonest in competitors and for which they are publicly flayed. Such virtue and such sincerity are truly remarkable and it is a wonder that persons in a "glass house" of that sort are disposed to cast so many stones. It might be well to remember,—
"You can fool some of the people all of the time, a part of the people some of the time, but you can't fool all of the people all of the time."

That the American Poultry Association stands in need of a genuine house cleaning—a clean up from within—must be apparent to every thinking member. It should also be apparent that the poultry breeders, and not the poultry editors, should conduct the business of the organization. Let the editors confine their efforts to comment on Association affairs and reports of the meetings and give the men who are really breeding poultry an opportunity to manage their own organization. The American Poultry Association has been used for a long time to fatten political pork, but the average member is sufficiently intelligent to do a little think-

ing for himself and to take a hand in the work of the Association. We do not know how long it will take breeders to wake up, be represented by a majority and get out from under machine rule,—but it certainly does seem that this spurious reform, "purify the other fellow," stifle competitors, and keep right on "milking the suckers," cannot continue to fool members very much longer.

Review of a complete file of the leading poultry journals for the past 20 years will present some interesting evidence concerning the "nigger in the wood pile" that should convince even "doubting Thomas." We commend to our readers the editorials in *Successful Poultry Journal* for May, 1904, also editorials and comment of several other journals in *Inland Poultry Journal* for May, 1904. Much of the comment then made—twelve years ago—might have been written yesterday, it is so closely relevant to present day conditions. From such poultry journal files as are in our possession it would appear that history is repeating itself altogether too frequently for the good of the American Poultry Association or for the best development of "every poultry interest."

Poultry breeders should wake up and get busy.

AMONG THE LATEST uses to which feathers are being put is their introduction into woolen and cotton yarns. The feathers are first put thru a process of feather-tearing (known in Germany as *Federreissen*) by which operation the feathers are freed of their shafts and other hard portions which would interfere with spinning.

According to an article in *The Textile World Journal*, feather material is introduced into yarns in various forms and the soft feathers of the smaller birds are chiefly used. Apparently here is a new use for the softer, moderate length fiber, feathers of our domestic fowls and we may shortly be wearing clothing, underwear and hosiery, colored and made lighter in weight by the introduction of feather material into the yarn from which such goods are knit or woven.

The author of the article states:

"The samples of feather-yarns which have been examined by the writer have the color of the feather constituents as near as possible to the prevailing color of the ground yarn, but there is no reason why the principle should not be extended in various directions. Feathers can be obtained in a large variety of very useful colors, and now that dyes are scarce the yarns could be worked in the undyed white state and the colored feathers introduced to impart a mixture effect. Tufts of black and brown show quite effectively, and even in small quantities would produce the natural colored yarns for the hosiery trade, where from 5 to 10 per cent of color is quite effective for the work.

"The preparation of feathers for yarns intended for underwear would need to be carried out with the utmost care or the article would prove uncomfortable for the wearer. Probably a safer scope for their use is in outer garments, and there seems no reason why such feather-tufts should not be useful in imparting nubs of color to woven goods. From the very light nature of the structure, their use in textile-manufacture is not so much for the purpose of giving increased weight, but rather to modify

the surface-appearance of the yarn."

The author adds that, "On account of the lightness of the material in comparison to its bulk, the feather-fibre in a small weight would give in color-effect and appearance the result of a much larger quantity." And he considers that feather-yarns would produce very desirable low priced goods and also "improve the handle" of yarns considerably without causing a corresponding increase in price.

Pretty soon we will have our fanciers attending the shows decked out from skin to surface in clothing manufactured from the borrowed plumes of their favorite varieties. What an opportunity for Red breeders to have real Red neckties knit from Red-feather-yarn. "Line forms at the right, gentlemen, don't crowd, plenty of genuine feather goods for everybody."

Awards in Chiles Co. Contest.

WE WONDER if Chiles & Co., Mt. Sterling, Ky., fully realized what they were putting up to the editorial department of this magazine, and how they were going to stir up the poultry fanciers of this country, when they made that double-header cash prize offer for articles announced in our March issue?

We confess we were curious to know what sort of articles would be written under the requirement that "No egg bosh, utility, or anything of that kind to figure in the article." Our curiosity is satisfied, our confidence in real fanciers has been "restored" and improved by several hundred per cent, and we never had a more difficult contest to decide. Over one hundred answers were received from all over the country. A great many articles of unusual excellence were included in the competition for both prizes and we expect to publish most of these articles as time and space permits.

Abundant good reasons were given for selecting a variety to fancy for fancy's sake and among the breeds and varieties represented in the contest were:

S. C. Buff Orpingtons, S. C. White Leghorns, Barred Plymouth Rocks, Rhode Island Reds, Spangled Wyandottes, Dark Cornish, S. C. Brown Leghorns, S. C. Buff Minorcas, Hamburgs, White Minorcas, S. C. White Orpingtons, Anconas, Sicilian Buttercups, White Wyandottes, Black Langshans, White Plymouth Rocks, Silver Laced Wyandottes, Golden Campines, Columbian Plymouth Rocks, Buff Wyandottes and Houdans. The whole continent was represented

GOLDEN ROD

Second prize Buff Orpington cockerel at Canton, Ill., 1914. Score 94½. Bred and owned by Richard M. Seward, R. 15, Lewistown, Ill.

from Canada to the Gulf and from Atlantic to Pacific. It was a great contest.

The \$25 cash prize for best article on "Reasons for Selecting My Variety" goes to a fancier of Barred Plymouth Rocks, P. H. Grigsby, Gloucester, Ohio, and his article appears in this issue.

The \$10 cash prize for best article on "How I Produced and Prepared My 1915 Exhibits" goes to a breeder of S. C. White Orpingtons, Louis C. Gercke, Augusta, Georgia, and his article will be found on another page.

Chiles & Co. have every reason for congratulations over results of this contest

and our readers will appreciate the articles which the generosity of our good friends in "Old Kentucky" have made possible. It will take time to print these articles, but most of them will be published for their real interest and for the good of the cause.

Humbug Reform.

AFTER reading the editorials and other matter in the *Un-Reliable* for April, it certainly looks as if the poultry public is being asked to endorse the antics of American Poultry Association political bossism and to hasten to turn over their ten-dollar bills that the Great Munchausen of the poultry world may get a chance to handle same. According to common report, it has always been an axiom of "side-show barkers" that "the American public likes to be humbugged" and possibly this is true within certain limits. Nevertheless there is a limit. It would appear that that limit is pretty nearly reached when an editor "runs amuck" with a humbug reform movement, regardless of the injury and damage to legitimate business.

After wading thru many pages of quibble and controversy in aforesaid publication, which leads to nowhere and which continues to clamor about a "volunteer report" and its authorship—altho said report was adopted, amended and recommended and accepted before being reconsidered—when the fact of authorship is a matter of little or no public concern since all four findings of the Executive Board were essentially the same—we are reminded of the story of the greatest fakir among side-showmen.

As the story goes, the side-show advertised a wonderful, astounding, stupendous, sacred, white elephant direct from the innermost shrine of India. The crowds flocked to the show and soon it became a problem of how to get rid of the people,—after they had viewed the artistically calcimined pachyderm,—before they became troublesome, and to make room that others might spend money for admission. So the enterprising showman had his painter hurriedly letter a large sign, "This Way to the Egress" and placed same conspicuously above a door opposite the entrance. The crowds eager to see an "Egress" in captivity hastened thru the door, only to find themselves in the street. Naturally,

it worked very well for a time. Their state of mind was probably not unlike that of the reader who has been wading thru so many columns of humbug reform, only to find himself back at the starting point.

The reading matter in some of these humbug reform poultry publications during the past several months has been anything but helpful to readers or to legitimate poultry business interests. Thru a desire to get at the real meaning of the work of the "grouch committee," we have waded thru an immense amount of "ink and paper talk," but so far it is apparent that the quasi-official organ of the said committee, in spreading out its findings, has not demonstrated any ability to unearth what they promised. It would be a joke if the results were not so far reaching and harmful; as it is, the whole thing appears as ridiculous buncombe. We had thought that possibly they might have roped a "crook" or two ere this and had such "hog-tied" in the American Poultry Association corral, for the "holier than thou" officials to use as targets in their practice work. But after many months of effort we do not find that they have one single "pirate," "parasite," "crook," or "vampire" convicted of any acts except those of which the members of the committee appear equally guilty. It does seem to be a waste of time to read so many pages of dribble, but we should be sorry, in case the "grouch committee" ever did investigate anything that should be investigated by them, or make captive a real live "parasite," should we fail to learn about it.

Some time ago a writer of note made the statement that "grouches" were of two kinds; the first, a species of human who does nothing and is never satisfied with what others do; the second, a species of devil who devotes his time to futile busying in an effort to combat constructive work by accusing others of his personal accumulation of crimes. Of these, to use the author's words, "the latter is by far the more dangerous, since his work is less than useless and is carried on chiefly to cloak his own unworthiness."

After careful reading of the latest report of the "grouches" we are reminded, however, that even behind the blackest

cloud the sun is still shining and in one or two instances, in said reports, we think we can catch a glint of sunshine. Regarding the investigations being promoted, mention is made of the probability of calling to the committee's aid the United States authorities, where, as we have said before, such work of investigation rightfully belongs. It is our belief, however, if the government authorities take up this work it will not be conducted under the guidance of the "grouch committee." We are glad to note also a considerable clearing in the "investigation" sky, in that criticised and condemned hatcheries and poultry dealers are now referred to as ———— and ————, instead of boldly giving names and addresses as heretofore. We have been informed that the latter change is due to legal action started by those who have been investigated and defamed in public print.

From correspondence between the leader of the "grouch committee" and poultrymen in different parts of the country, which has been submitted to us, there is ample evidence of an amazing amount of "artificial discrimination" in the work of the clean-up or "grouch committee." We have before us letters asking the leading "investigator" to investigate certain claims of advertisers in his publications, and his replies to same which state that this "self-sanctified leader" is "too busy" with other matters to investigate said advertisers. Here are claims of big advertisers questioned and in his replies the reform edi-

tor admits that many have questioned these claims, yet when subscribers ask—even demand—investigation of such claims, the promoter and chief advocate of the association's "purify the other fellow reform" is too busy with other things to take up matters calling for investigation. Would he be too busy if party to be investigated was not an advertiser? Is it necessary to buy immunity? As the recital of the Harrison-Penick proceedings have been worn threadbare, we suggest to this "too busy" man that, where time is so much needed, the irrelevant matters dragged into this recital about "volunteer reports" and the recital itself might now be dropped,—certainly it would afford great relief to a much abused reading public.

According to this "self-sanctified leader" the American Poultry Association is represented as ninety per cent. pure where it agrees and works with him as political dictator, but alleged to be ten per cent. crooked where it disagrees with him and his humbug reform methods. If it should happen that a U. S. Government investigation committee ever starts to go to the bottom of these American Poultry Association matters—and if Uncle Sam does start he will probably be thoro—we believe that the poultry fraternity will then learn beyond a doubt

the real reasons for all this clamor for investigations and the motives which inspired these self-appointed investigators. There has been much publicity howling about "pirates," "parasites," "crooks" and "vampires," but we are willing to trust it to a Congressional committee to smoke out the arch-pirate or pirates, if such there be.

Theodore Hewes in February *Everybody's Poultry Magazine* spoke well and truly when, in referring to these investigation matters, he said,—"You know there is an old story and a very true one about trying to throw dust in the other fellow's eyes so he won't see us."

H. H. STODDARD GOES ON RECORD.

By HELEN T. WOODS.

THE genial philosopher, Dr. Oliver Wendell Holmes, once remarked that "the great thing in the world is not so much where we stand, as in what direction we are going." Just as a man's deeds tally for or against honest dealing, so are scored the works of an association of men.

As two bodies cannot occupy the same space at the same time, neither can an association progress outwardly when it is deteriorating at the core. There has been sufficient evidence now made public in the proceedings and published statements in various poultry periodicals of the meeting of the American Poultry Association at San Francisco, to place the stigma of retrogradation upon the acts and present policy of the association.

While, greatly regretting the questionable enactments of the association at its last convention, the general run of poultry men and women are thereby enabled

to very materially increase their faith in human nature, thru the widespread condemnation of such measures as has lately been voiced by reputable poultry breeders and men of high standing in the poultry world.

The editors of the *AMERICAN POULTRY JOURNAL* have received volumes of cor-

ing combine of the association in the hands of a few, while more or less powerful, is tremendously outweighed by the really honorable, progressive and constructive element of the association.

In a private letter relating to other poultry matters, recently received from H. H. Stoddard, one of the best known

The above view shows a pen of Columbian Wyandottes bred on Wilburtha Poultry Farms, Trenton Junction, New Jersey. This pen won 1st prize at Madison Square Garden, 1915-1916.

respondence condemning the actions of the American Poultry Association at its San Francisco meeting. These expressions of disapproval of recent developments in the American Poultry Association plainly show that the retrograd-

and most widely respected pioneers in poultry culture, and a charter member of the American Poultry Association, he says: "I would like to go on record as voicing a most earnest disapproval of the degeneracy of the old child of my heart—the once honorable and dignified American Poultry Association."

"In regard to the huckstering discussion now prominent in the poultry press, there is a lot of prating and 'holier-than-thou' talk that makes me tired. In the *Reliable Poultry Journal*, March, 1916, page 75, col. 3, I find:

It remains for the American Poultry Association to investigate these mammoth hatcheries—and it is to be done. This investigation should be made in the near future, for three main reasons: first, to protect the standard-bred poultry business as an industry; second,

M. O. McDANNELL, 1430 24th Ave. A, MOLINE, ILL.

Regal Fertility

At this season of the year fertility is a most important question. The finest pen in the world would be of no value if you could not get fertile eggs. Regal White Wyandottes have always been bred for vigor and today I am getting results. Letters like the following are very pleasing:

Colorado Springs, Colo., March 18, 1916.

Mr. John S. Martin, Port Dover, Ont.

Dear Sir—The one hundred Dorcas White Wyandotte eggs purchased of you on March 1st, 1916, proved to be 85% fertile and am greatly pleased with such fine results from eggs shipped so early. I remain,

Yours truly,

C. W. BROWN.

Later Mr. Brown reports a satisfactory hatch and says "they are the finest chicks I ever saw; they are surely doing fine, and at four days old they look and act like chicks two weeks old."

Are you having satisfactory results? If not, why not try the Regal Strain? May is the best month of the year to hatch prize winners, and I positively guarantee satisfaction.

Eggs for hatching from twenty beautiful exhibition matings, \$5 per 15, \$9 per 30, \$12 per 45, \$24 per 100.

Dorcas matings composed of trap-nested heavy layers, \$5 per 15, \$15 per 50, \$27 per 100.

Utility matings, \$9 per 100.

FREE — Send for twenty-page catalog and mating list.

Send one dime for the Regal White Wyandotte Book, telling all about White Wyandottes.

JOHN S. MARTIN, Box 51, Port Dover, Canada

to prevent deception and loss on the part of many persons who are now buying day-old chicks from certain hatcheries that possess little value as standard-bred stock; third, in justice to such day-old chick hatcheries as are telling the truth about the quality of the chicks they are selling, regardless of the prices they are asking for them.

"Why! Sakes Alive! No private individual or set of individuals or association—not even the great American Poultry Association itself, can legally go poking around a man's private business, and afterwards print and circulate a report that the proprietor charges more than the goods are worth. Such a preposterous investigation never was heard of before!

"Who is to investigate the investigators? Why are they supposed to be any more honest than the hatchery men or hucksters? They are surely subject to more temptation than the 'hatchery-huckster' proprietors are. They have a surpassingly fine opportunity for levying blackmail on the proprietors.

"To begin with, no private person, editor of poultry paper, reporter, nor

Second R. C. Red pullet at Illinois State Fair, 1914. Owned by Quincy Poultry Farm, Quincy, Ill.

association, is empowered to send for persons and papers, to swear witnesses and cross examine them, under pains and penalties of perjury. And who does not realize that our courts, tho trying to do the very best frail humans can do, often find it hard to administer justice, tho equipped with all the aids mentioned?

"I am interested in no hatchery or anything else that American Poultry Association is likely to investigate, nor is any friend or acquaintance of mine. But when the once decent and respected American Poultry Association degenerates so far as to become a laughing stock, I hope my fellow charter members and all who attended its meetings in the early years, *before it had softening of the brain*, will protest against its attempt to usurp the functions of a court of law. If any one is wronged or cheated, what on earth are our courts of law for if not for this purpose?"

It is plain to be seen that Mr. Stoddard, along with all true friends of the best interests of poultry culture, concurs in the opinion that the American Poultry Association in its late activity against honest poultry interests, is headed in the wrong direction.

The unfortunate use of the association to further political ambition and

private interest of a very small percentage of its membership appears to be at the root of the association's evils. There are plenty of clean-minded, honorable and worthy members of the association to call a halt to the unbecoming antics of the political tricksters, now endeavoring to throw dust in the eyes of the whole poultry world for the purpose of screening their own misdeeds. It is to be hoped that the worthy element in the association, who are greatly in the majority, will adopt active and vigorous measures to put a stop to further suicidal nonsense of attempting to purify everybody except the "lily white" Purification Committee.

Our Cover.

WE TAKE great pleasure in showing on our cover page this month an actual photograph of a White Wyandotte cockerel belonging to John S. Martin, Port Dover, Ont., Canada. This bird was a first prize winner at the Great Hagerstown show, 1915, and is certainly a most handsome specimen of the breed. We call our readers' attention to the fine quality of the photograph, it was made by our Mr. Stahmer at the Hagerstown Fair and shows that retouching and altering is unnecessary when the specimen is first-class.

DR. WOODS' NOTES AND COMMENT.

MAY.

Spring's last-born darling, clear-eyed, sweet,
Pauses a moment, with white twinkling feet,
And golden locks in breezy play,
Half teasing and half tender, to repeat
Her song of "May."

—Susan Coolidge.

* * *

May chickens are good chickens and make rapid growth.

* * *

Mediterranean varieties hatched this month are, by many, believed to be the best and most profitable of their kind.

* * *

Nests for sitters this month should be prepared in sheltered places out of doors. We like a bank or group of ten nests, with waterproofed roof and wire front door, placed on the ground in an evergreen grove or other shelter. The bottoms of nests to be made of one one inch mesh wire netting to keep out rodents. Nests first shaped with earth or loam and then made of tobacco stems and pine needles or a little soft hay. In such nests out of doors we get our best hatches in May. Sitters should have a long narrow runway and be fed at the end of it to promote needed exercise.

keep the poultry houses cool and comfortable. This is necessary even with open-front houses. With houses of the semi-monitor type, open the monitor windows. We generally open ours during May and leave them open until fall. With the Tolman house it is a good plan to provide a wire net door and leave the regular door wide open to keep house cool and comfortable.

* * *

As the sun begins to warm things up do not fail to provide shade. Also provide shelter for the birds to run to in sudden storms. A few evergreen branches on top of brooders and brood coops will make things more comfortable for the chicks and for the brood hens.

* * *

Keep your flocks comfortable, it is humane and it pays. See that they are always supplied with cool water and keep it in a shady spot that is easily accessible. Supply clean water and renew supply often, if you cannot provide running water or a drip system.

* * *

Sun and air out the brooders regularly every day at feeding time. Turn the hovers bottom up to the sun for a little

while every bright day. Clean brooders and coops every week. Change to new ground or increase size of run before soil becomes foul. If you must use small bare runs, sweep them clean before every rain storm and spade them up frequently.

* * *

Look out for lice and mites. Dust brood hens every few weeks with dusting sulphur. Use a little oil about vent, under the wings and on heads of brood hens and a small drop of oil or grease on head of each small chick. Sweet oil or melted lard is good, it helps to keep them free from lice. For mites clean up the poultry houses and coops thoroly and sweeten with a good white wash or disinfecting cold water paint. A good lice killer should be applied to roosts, particularly ends and the supports, to keep down the mites. Apply same in morning so that it will dry in before fowls go to roost at night. About one pound of naphthalene flakes (crude) dissolved in a gallon of kerosene, makes a good mite killer for use on roosts and drop boards.

* * *

Burn all old nesting material. Renew the bedding of nests often. Do not use strong smelling material for making nests for layers and do not use medi-

cated nest eggs in layers' nests. Remember that eggs are easily tainted and the quality of table eggs is ruined by anything that gives a strong flavor to them.

* * *

In starting small chicks out of doors, give them a small run at first and increase the size gradually. It is usually better to confine the hen and let the chicks run.

* * *

When you are thru hatching for the season, select the best hens that you desire to carry over for another season and rest them in a well sheltered grove or orchard, or in a good open-front shed and shady, roomy yard. Feed a good allowance of hard grains, mostly oats, and see that they have plenty of fresh greens. If they can be penned in a pine grove and permitted to live entirely out of doors and roost in sheltered trees during the summer, they will moult well and go into winter quarters in unusually fine trim, ready to do profitable work for you during the next breeding season. Keep the males away from them. Your best males can be given a few mates, that you do not care to hold over longer than fall, and give them similar quarters and care until fall housing time. A little

Aldrich White Orpingtons REDUCED PRICES

HAVING finished hatching earlier than usual this season, we will reduce the prices on eggs from our different matings to one-half the regular price after May 5th, thus making eggs from our pens headed by our Chicago and Madison Square winners cost \$5.00 and \$7.50 per setting and from our \$5.00 matings, \$3.00 per setting or \$15.00 per 100. We also offer our remaining male birds at a discount of one-third from our catalog prices.

If you wish White Orpingtons from America's most popular strain, thus enabling you to **advertise Aldrich Strain White Orpingtons** and obtain good prices for your stock and eggs, you cannot afford to pass by this chance to obtain eggs or stock at these low prices

Order direct from this ad if you want prompt shipment as all orders are booked in rotation, and we will forward our mating list, from which you can make selection.

special attention given to choice breeding stock will be well repaid in good results later on. Summer layers can be kept in similar outdoor quarters or a well aired, cool house, and pushed for egg yield with very satisfactory results, but the wise breeder will not use worn out, forced layers for breeding stock.

* * *

Cleveland will probably get the annual meeting of the American Poultry Association and the meeting will have to begin on August 8th,—the new constitution is mandatory on this matter. Section 11 of Article III reads: "The annual meeting shall begin the second Tuesday in August of each year, the place of holding it to be determined by a mail ballot of the association at the same time and in same manner as the mail election of officers. It shall not be held at any other time, or in connection with any poultry exhibit or display, unless for extraordinary reasons the Executive Board recommends at an annual meeting that exceptions to one or both these specifications be made for the next annual meeting; in which case the time, as well as the place, shall be determined by vote of the whole association in the annual mail ballot."

For Cleveland it is an unfortunate fact that no recommendation of the Executive Board as to change of time of annual meeting was made at San Francisco—Everybody was too busy with other troubles. The time as well as the place was voted on the nomination ballot, but the error was discovered in time to have regular ballots go out in accord with constitutional provisions, allowing the vote for place of meeting only. The constitution provides that the meeting shall begin on the second Tuesday of August, which is August 8. Cleveland members are going to be more or less disappointed, as the week of August 14 to 19 was the one selected by the local association as the most desirable and convenient, and several poultry papers have been boosting for that week; but the new constitution apparently does not permit any other date than the second Tuesday, since the Executive Board failed to make any special recommendations for a change.

* * *

Constitutions Wanted. The following

item is from the editorial columns of *The Poultry Record*; no comment is necessary:

"In accordance with the expressed wishes of the members of the Cleveland Poultry Association we have joined with them and with others in urging members of the American Poultry Association to vote for the third week of August as the time for holding the next meeting of the American Poultry Association. Now comes a letter from Secretary Campbell calling our attention to the fact that the American Poultry Association constitution sets the time as the second week in August. It looks as tho' the American Poultry Association might well circulate a few copies of its constitution or publish it in the Bulletin, so that members might know what is in it. It would appear that even the election commissioner does not know it, or he would not have it on the ballots. What's the use of voting on it, if the constitution sets the time?"

* * *

Egg eating is one of the most exasperating habits that fowls contract. We had some new arrivals this spring that had learned egg eating by being starved by express messengers while on the road, and they had to learn to eat eggs or starve to death. The first week we had

RUFUS MORSE : : BELDING, MICHIGAN

them, we could not beat them to the eggs. They would not lay in the nest, but would drop eggs on the floor, or from the roosts, and then scramble to consume the delicacy. We tried practically all the stunts we knew and without results until we adopted heroic measures. We took a flat file and filed each bird's beak down to the quick at the point, just close enough to make it tender but not to draw blood. Then we put some china nest eggs on the floor and a nice trap nest just above floor level. The nest was left invitingly open at first and a nest egg in it. The egg eating stopped at once and only one egg, that was accidentally broken, was eaten after the filing. They learned to use the trap nests in a few days and now they do not even remember that they ever were egg eaters. Tried them by putting an egg on the floor and they did not even look at it.

* * *

We do not usually run our flocks thru the winter without litter to scratch in. A well littered floor promotes healthful exercise and helps to keep the birds' feet clean, which is a factor in getting clean eggs. The past two winters we have not had litter material to spare and good clean straw has been so high in price that we decided to get along without it. With large flocks the high-cost of litter increases the production cost of eggs very considerably. So, the last two winters we have used an abundance of dry sand on the floors of our poultry houses and done without litter, except with a few small flocks. The birds took plenty of exercise in scratching in the sand and it kept most of them with quite short toe nails. The birds themselves did not look quite as trim and clean in plumage as when we have used deep litter, but otherwise they were in fine condition and very productive. To insure clean eggs the floors were well raked often and the birds were not allowed to run in the wet until after the bulk of the day's laying had been done. The plan works very well and it saves money; but when litter is cheap we prefer it.

* * *

A few of our readers have been having a little trouble in using the "Zenith" or "chimneyless" burners for home-made brooders. The trouble is caused mostly by insufficient ventilation of the lamp chamber and getting the lamp flame too close to the metal top chamber. The flame when running full should be not less than four inches from the galvanized iron top of lamp chamber, which serves as the hot air heater. If the lamp chamber has not been made sufficiently high, a hole in the earth under the brooder can be made to receive the lamp and so lower it. This will also help to keep the

lamp cool. Here, as elsewhere, experi-
ence helps in getting satisfactory results.

* * *

Writing on "The Rebirth of Barbar-
ism" in the *Boston Globe*, "Uncle Dud-
ley" says:

"War is now a proposition in scientific,
mechanical butchery, and the Nation which can
butcher most scientifically, most mechanically,
and on the largest scale, is the Nation likely,
according to militarist logic, to become the
mightiest toad in the puddle.

"That it is a loathsome toad and a bloody
puddle is merely the logic of war. History
shows that war has been growing steadily less
gentlemanly as it grew scientific, and once we
pin our faith to organized violence, the better
organized it is, on the showing of the military
case itself, and the more violent, the safer we
are.

"To expect militarism to 'crush' militarism
is, like the race of armaments which preceded
this war, a race for a precipice: over goes the
winner.

"Old-fashioned war was a courtly prize fight.
Modern war is a rough-and-tumble street fight,
with every premium on hitting below the belt.
Once that starts, there is no place to stop."

Read that again and think it over, then
ask yourself what you really think about
militarism, preparedness, and possible
conscription. Do you want to raise boys
to be merely "cannon fodder" and girls
to be merely "brood mares" to breed
"food for the vultures?" Is it a good
thing to slaughter the majority of man-
kind that the few may wax fatter and
richer and become more powerful until,
instead of a Nation of the people and
for the people, we have only masters and
slaves? It is a subject that will bear
considerable thought.

* * *

We have to live in the world as we
find it,—true enough. But at least we
can learn to think for ourselves, and it
certainly looks as if most people had let
someone else do their thinking for them
quite long enough. Brains were not
made to be merely phonographic records,
to be prepared by dictation and then to
parrot the thoughts of interested mono-
poly. It is about time to wake up, to
think, and to act before the whole of
civilization goes over the brink of that
precipice "Uncle Dudley" talks about. It
is an interesting and stirring time to be
alive, and it certainly would appear to
be a good time to consider what is the
real meaning and value of Christian
teaching. Should we have a world for
all mankind with progress and prosperity
for all? Or, should we kill progress,
murder the brotherhood of man, and re-
turn to barbarism? Isn't it just possi-
ble that this is "worthy of thought?"

* * *

It would be interesting to come back
to this world a hundred years from now,
with full possession of such small knowl-
edge as we now have, and review history
as it will be written. The world is
a pretty nice place, a good place to live,
and life is well worth living; but we can-
not see what great good can be devel-
oped by dying for one's country, when
to live for it and work for it would ap-
parently bring much better and happier
results for everybody. Viewing each
day's events as they occur and reading
the contradictory views of our greatest
minds, one cannot help wondering
whether we are going forward or back-
ward.

* * *

After the long, old fashioned winter,
the heavy snowfall, the ice and slush, it
seems good once more to feel the spring
of the quickening turf underfoot and to
once more stir the soil and make it ready
for planting. A hard old winter, yes,
but it is gone and the heavy clothing is

Automatic Ventilator

For Brooder and Colony Houses

The "Ideal" Ventilator, automatic in operation, requires no attention. Opens and closes whenever the temperature needs adjusting; noon or midnight. Keeps fires going without over-heating and avoids chilling from open windows. Overcomes all brooder troubles. Fresh air makes more healthy chicks. Prevents crowding.

Adapted for every type of poultry house or any brooding system. **Price \$4.50**, delivered anywhere in the United States. Satisfaction guaranteed or money refunded.

Write for particulars.

LIBERTY STOVE COMPANY 102 S. Third St. PHILADELPHIA, PA.

no longer needed, the sky is bright; the sun warm, the breezes have the mellow fragrance of opening buds and blossoms, the birds are nesting and singing in the trees, there are bird houses to be put up, flower beds and garden to make, the chickens to be cared for and the other multitude of warm season work crowding so fast that there is no time to consider much but the glorious present and the hope of the future. It ought to be a good season; has got to be if we can make it so.

* * *

Those who do not sleep out of doors don't know what a blessing and satisfaction there is in a bed room on an open sleeping porch. The frogs did not begin their first concert in Old Forge Pond this year until April 5, but that evening they began making up for lost time and sung us a lullaby that certainly sounded good. Now and then the splash of a big fish and always the roar and steady rush of the spring full freshet running over the spillway of the dam, now and then the rumble and pounding of a bit of drift wood as it leaps in the fall of water, and then the Honk! Honk! of a big flock of wild geese flying north. Going to sleep is a mighty interesting and satisfactory proceeding under such conditions. Then at dawn the clarion of the cocks in the poultry houses wakes us up in time to hear the wild birds welcoming the morning, the water still is keeping up a noisy clamor below the dam. Old Sol in the eastward is looking straight into our face and says it is time to be up and doing. Springtime at full flood is surely a season of promise and out door sleeping helps one to enjoy it to the full.

* * *

Just to show how the gift of a sample of good quality goods will bring results: Last fall we gave a visitor half a bushel of newly dug potatoes and some new laid eggs. It created a steady egg customer and now we are selling them eggs by the case to put down in water glass and their neighbors have been invited into the deal. Not only that, but they are begging us to grow, just for them, "ten bushels of that same kind of potatoes." If we had the time to devote to it, it would take very little work to develop a good private market for everything that we could produce on the farm. We sold most of our last year's potato crop because prices were tempting, but we still have enough for home use for some time, altho not quite as many as we would like for seed. When we think of doing our editorial work here on the farm as we do now, and how a good many others are doing that sort of work in a stuffy, noisy office in a brick block in the city, we do not wonder that such editors get full of natural cussedness and grouch. To really enjoy writing about chickens and agricultural matters one should be out on the farm where things grow and where Nature is at her best.

* * *

In spite of the fact that the American Poultry Association Executive Board three times rendered the same verdict, that so-called "voluntary report," like Banquo's ghost, declines to be downed. It looks as if Macbeth had indeed murdered sleep. The following is quoted from a letter written March 18, 1916, by J. D. Veach, of Hubbard, Montana, to R. G. Bailey, of Lewistown, Idaho:

"I have letters from prominent Canadian members which lead me to believe that they will withdraw from the American Poultry Association."

Do you want to get twice as many eggs?

See announcement on page 793.

Madison Square WINNERS

Kulp's wonderful Rose Comb Brown, 242-egg strain; S. C. Brown, 240-egg strain; both big winners at Madison Square. Large birds, large eggs. 2 greatest strains bred.

Four customers in New York, two in Montana, one in Idaho, two in E. C., one in England and many others have written me that my Rose Comb Brown Leghorns excel all others as layers, and lay large eggs. I never had so many prizes reported as this year.

One man writes: "When it comes to Single Comb Browns you are in a class by yourself." I have most Wonderful male color. Stock for sale, all breeds.

Rose Comb White, first Madison Square, big white eggs, big birds, record of 244 eggs.

S. C. Whites—236 to 288 egg strains. No better in the world. Try them.

S. C. Red cockerels of 248 egg strain. They are the top.

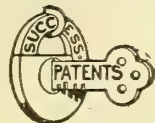

White Wyandottes—228 egg line.

Barred Rocks—270 egg strain.

Eggs \$2 to \$7 per 15. Catalogue.

MRS. ADELAIDE C. WAINRIGHT
Department J, RED BANK, N. J.

ciation in a body if Curtis continues to dominate the conventions.

"I am about losing confidence in the American Poultry Association under its present management. If Richards denied dictating that report and Thompson and Peters fall into line with him, I am ready to say that Grant M. Curtis is some hypnotist. As God is my judge, Bailey, I told that just as it happened, but I want to state further that if I could honestly claim full responsibility for putting that finding thru, I would be proud of it. I would rather trust Harrison than either Penick or Curtis. This stink is likely to lead to serious difficulties in the Association."

The statements of Messrs. Bailey and Veach were published in March AMERICAN POULTRY JOURNAL, pages 515 to 521. The interested reader can draw his own conclusions.

Considering the source of the resolutions which resulted in the appointment of the American Poultry Association's inquisitorial investigation committee and also the personnel of the committee as appointed, the following clippings from Pres. Richards' March *Western Poultry Journal* and this letter from a New Mexico life member are both interesting and amusing. Truly the censoring and censoring might well begin at home:

Albuquerque, New Mexico, March 21, 1916. Editor American Poultry Journal:

As we journey by the way, is it not really amusing at some of the efforts that are put forth to "clean house?"

Seems to me that it is considerably over a year ago that you wrote your editorial that we do some cleaning from within and it appears that the advice there given could be well followed today and for some time to come, and it is time that some "censoring" was done and if rightly done might stop a good deal of censure.

Enclosed are two pages from March number of "Uncle Dick's" magazine: I assume the write up of Valley View is clipped from the *Inland*, but note what is said of these chicks by Hallet on January 7th, 1916, while just a short time before, on October 12, 1915, note what Thompson said about incubators. Now just such as that makes the rank and file wonder where the devil we are at and what the big guns of the American Poultry Association mean anyway. To say the least, it don't look good in the same issue of one paper and "Uncle Dick's" paper at that. Personally, it does not worry us, only makes us laugh, nor does it have any effect on what we shall buy and sell. We breed "Ringlets" because we think them the best chicken on earth, and we use Cyphers adaptable hovers because we have found them good, and voted our ballot for "Uncle Dick" and hope to meet him and the whole bunch at Cleveland; yet, at the same time, we cannot but feel that such things are hurtful and that your advice to "clean from within" still holds good, not alone for our own good, but for the beginner and prospective member, who we would like to have with us, but when he sees such contradictory junk in our papers he thinks "damn."

Life Member.

In condensed form the clippings follow:

"Approximately 4,000 youngsters are reared, and what was a complete surprise to us was the fact that each and every bird hatched and reared on the farm are hen-hatched and hen-reared."—(Report of Thompson's Valley View Farm, page 336, March, 1916, *Western Poultry Journal*.)

"During my more than thirty years' experience in breeding exhibition Ringlet Barred Rocks, I have never seen or used the equal of Cyphers incubators and brooders. I feel safe in putting my best Ringlet eggs in the Cyphers, whereas I would not trust them in a machine in which I did not have perfect confidence. This past spring I hatched a large number of very early exhibition Ringlet Barred Plymouth Rocks and am glad to state that many of them were hatched in your Cyphers incubator. * * * I put 41 Ringlet Barred Rock chicks in one of these brooders and raised 39 of them to maturity."—(From statement credited to E. B. Thompson, dated October 12, 1915, and published on page 371, March, 1916, *Western Poultry Journal*.)

With Editor Richards hot to reform the poultry business and censor and censure all erratic advertising, the appearance of above quoted statements in his March issue are certainly placing him

Hatch 'em by electricity

This energizing force enables you to hatch chicks with but a fraction of the labor and risk involved in operating other machines.

The control of heat, moisture and ventilation is absolutely dependable. No guessing, no watching, no filling of lamps and trimming of wicks. The operation is perfect and insures a strong, vigorous chick from every hatchable egg.

Lo-Glo Electric Incubators

Make the hatching of chicks a real pleasure. These perfect machines are all metal, fire-proof, odorless, sweet and sanitary. Handsomely finished and may be operated in any room, store or office. Many users place them in the parlor or dining room. They're simple, practical and efficient. Sizes from 50 to 400 eggs. Successful, no worry, hatching insured by doing it electrically. Fully explained in our booklet.

Lo-Glo Hovers successfully carry on the splendid development of chicks started in the right way by our incubators. Sizes 50 chicks and up. Write for free booklet

BROODER

For \$2.96, including heater, you can build the simplest, most efficient, and most satisfactory brooder ever made. Wind-proof; fire-proof; rat-proof; fool-proof. Can be built in an hour by anyone with no tools but saw and hammer. Illustrated plans, 25c.

\$2.96

I. Putnam, Route 105, Elmira, N. Y.

Mention AMERICAN POULTRY JOURNAL when writing to advertisers.

in a ridiculous position. When we visited Valley View in December, 1915, we asked to see the incubators and brooders and we were informed that there were none on the home farm. In fact, it seemed to be a matter of pride that all chicks were hen-hatched and hen-reared. From the information then given to us by Valentine Thompson we made the following statement on page 45 of January AMERICAN POULTRY JOURNAL:

"Each season approximately 4,000 chickens are raised, all hen-hatched and hen-brooded. These are hatched so that first lots of chicks come about the middle of March and the last hatches about July 25th. Some early eggs are sent out to be incubated artificially, but all stock grown on the home plant is natural hen-hatched and hen-brooded."

It was then evident from the great number of brood coops for hens and chicks that the natural hatching and rearing method was the prevailing one.

Well, that's a funny break of "Uncle Dick's" any way you look at it. Also it is remarkable how freely testimonials of all sorts are given and how the dates are marked up on old ones. We recall visiting a certain Eastern plant a few years after it had given a most remarkable and glowing testimonial for a certain incubator. We found the machine, still in its original crate, out in the shed and covered with a great accumulation of dust. However, that is nothing against incubators and is only an illustration of a particularly human side of human nature. We use both hens and incubators ourselves and right at the present writing have some of the eggs from our best pens in an incubator and under hens. Often at the end of two weeks we take them out of the incubator and finish the hatch under hens; particularly when we want to mark a certain lot of chicks from special eggs.

Wonder if the censors will get busy in their own back yard? Gracious! When we think of the many things that any, or all, of us might be censored and censured for, it makes us wonder when that "purify the other fellow committee" will find time to eat and sleep. Let's hope that the committee members will set us a good example.

Well! Well! We hope none of those interested missed that beautiful four-panel cartoon of us on page 466 of April *American Poultry World*. Pardon our blushes, but we are not accustomed to appearing in public so scantily clad as Artist Schilling has depicted us in the abbreviated skirts of a Roman gladiator—it looks more like a modern ballet costume to us. And then there is the cunning little foot note in which Curtis tries to hide himself behind the skirts of W. C. Denny, said skirts being scantier than those granted us and affording little concealment. We recall that several times Denny expressed to us his willingness to be Curtis' "little yellow dog," but we really did not expect to see the master cowering behind the friendly wag of the "little yellow dog's" tail. It must be tough for employes on half pay to have to fight the boss's battles.

AMERICAN POULTRY JOURNAL in the fourth panel is presented as a great tortoise, with the legend "watch our speed." Let's see, wasn't there an ancient fable about a tortoise that won the race by being slow, perhaps, but sure and steady? Denny says that Schilling was "prompted to prepare first one and then another of this series of illustrations" by reading our open-letter to the American Poultry Association,—there are four of the pret-

CARTER'S POULTRY FARM,
Jonesdale, Wis.

ty pictures. In one we are represented with a "shield of insincerity" and in another dipping our pen in the ink of "spleen and jealousy" or "envy and hatred." Wonderful how history repeats, for other editors, in days gone by, were represented as feeling the same emotions toward the Little Sultan. Fortunately we are not at all emotional, and in the cold analysis of dawn it looks to us as if the "boot was on the other foot."

As to "little Arthur's" own sincerity and loyalty of purpose, we wonder, and, wondering, feel some doubt. It certainly is not very much over a year since he came to us with a pitiful tale of how his boyish inexperience and the "virtuous one's" hypnotic speech had led him to trust some \$4,000 of his savings and earnings in one of his master's enterprises—as we recall it, only one block of the stock had been guaranteed redeemable at par by indorsement on its face—and he had heard that we had recovered par for our stock and he wished us to help him with advice on how to get his money back. Also, we believe, there was a hard luck story about having been on only half pay since the trip to Germany. As we remember it, we advised him to ask for the refund of his savings. Surely so virtuous an employer would not refuse to return the "candy taken from an infant." But, what gets us, is why, if so sincerely loyal and loving, did he come to us with his tale of woe? Why not appeal to the chief promoter of the American Poultry Association alleged purity committee? To paraphrase a "famous" headline, — If \$1,000, why not \$4,000?

* * *

Los Angeles, Cal., March 26, 1916.
Dear Doctor:

Have just read "copy" of your open letter to American Poultry Association and comments thereon by the "Hon." Grant M. Curtis. I say go to it and bring 'em all to time.

Am enclosing herewith some letters and copies that I think by careful study will be self explanatory. I am a rank amateur in poultry business. I can see thru a four-inch plank, if there is a knot-hole sufficiently large. Simile is from my experience in lumber business. You are at liberty to quote me verbatim herein; comments on back of letter and my copies. I say that "the pot should not call the kettle black." C. D. Loehr.

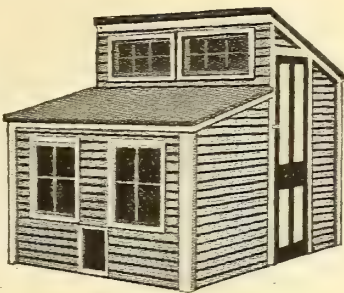

Mr. Loehr encloses correspondence which shows why he decided he would not invest in breeding stock from the poultry farm in which the editor who is "investigating hucksters" is interested, as he could not get satisfactory answers to his queries and considered the letters sent him too evasive and indefinite as to what he would get. He decided on strength of correspondence that he sends to us, that he would invest elsewhere and the plain, honest, straightforward advertisement of veteran I. K. Felch appealed to him. In a note on back of one of the letters, Mr. Loehr says:

"I bought White Rock yearlings of Uncle Isaac Felch, Natick, Mass., and got extra good value for my money. Uncle Ike is O. K. He sent me a cock scoring 94½, one hen 96, three hens 95½, one hen 95, three hens 94, one 93 and one 90, all for \$50, and the ten hens have laid 212 eggs since February 12—today is March 26. He did not give me any evasive replies nor misrepresent anything in any way. I admire him and am going to boost him at every opportunity." C. D. Loehr.

No, "you can't fool all of the people all of the time."

bone fancier, Jodrey fills all requirements. We haven't seen him for a number of years and have not had a letter from him for a long time. We would like to have a talkfest with him once more. Most of the other "old timers" in the fancy, who were our near neighbors in those days, have gone beyond; but we cannot help wondering what they would think of the political buncombe and money-mad commercialism that is pretending to represent fancy poultry interests now-a-days.

An Opportunity of a Lifetime.

For Sale—Poultry Plant with 600 Orpingtons.

Established for years. Doing \$8,000 business yearly.

Nine thousand feet of floor space in perfectly constructed poultry houses, including large heated conditioning room for exhibition birds.

Twenty-one yards in blue grass. Six foot attractive wooden fences boarded up thirty inches high. Fencing painted green. Houses painted red. Abundance of shade. Landscape gardening with ornamental trees. Spacious lawns about residence. Five thousand dollar residence with roof garden; ten rooms, including large hardwood floor ballroom; basement with large furnace and water works working perfectly; model bath room; beautiful interior decoration; splendid lighting system. Decidedly private yet but three minutes walk from steam and electric depots; freight, express and telegraph offices. Local and long distance telephone service.

Six hundred superior Buff, Black and White Orpingtons richly bred and possessing world-wide reputation, many of the birds capable of winning in the keenest competition in America.

This entire property, together with the stock of Orpingtons, \$10,000. Terms, \$5,000 cash; balance terms. Owner will reliably explain how this plant can be continued on paying basis as in the past as \$80,000 business has been accomplished past ten years.

Without stock of Orpingtons, \$6,000. Terms, \$4,000 cash; balance terms to suit.

For further particulars address American Poultry Journal, 542 South Dearborn St., Chicago, Ill.—Adv.

Disqualifications.

A few prominent poultry breeders are advocating that disqualifications for trivial defects like down between the toes, one-half inch of white in black varieties, etc., be abolished. And it does seem ridiculous to disqualify a bird of fine type, size, etc., for some of these defects and give the prize to some inferior bird free from them. Of course it is proper to consider these things as serious defects, but the objection is to considering them as disqualifications. There seems to be a growing impression that type, size, etc., should take precedence over fancy points of so little practical value.—The Poultry Record.

Best Made—Lowest in Price

Home and the Table

Good Things for Everybody

Helen T. Woods
Editor

They say that once a proud and sinful King,
Alone with his own conscience on the shore,
Beside the billowy ocean fell asleep:
And rising up in wrath, the mighty deep
Engulfed the wretch, with fierce and thunderous roar.
Oh, ye do well, ye despots of the world,
Never to close your eyes repose to take.
The people are a sea—a deep strong sea,
That thinks, and punishes, and wrathfully
May rise and swallow you. Keep wide awake!

—From the Spanish of Julio Flores.

BENJAMIN FRANKLIN once remarked that there was nothing about which men took greater pains than to make themselves unhappy. To one reading the preparedness propaganda so frantically presented by numerous newspapers and "fear" begetting books, it looks very much as though good old Ben Franklin was about right on the matter, as he was on so many others.

Presumably, when "peace has become a menace," as one writer tells us, the war jingoes feel in duty bound to get out and shout lustily for war. It all would be most amusing if it were not

so serious to note the tremendous burden of responsibility shouldered by some of our "war at any price" leaders, in their effort to exercise coveted authority over useful, well behaved people. The war leaders seem to possess that strange hallucination common to the exaggerated ego type of man, wherein if he does not lead the band, and the people fall right into line, he endeavors to lead us to believe that the world will go straight to "smash."

As a matter of fact, most people not only do not need authoritative rulings but they behave a great deal better without them. Most of us have very little

need of a policeman's services and thousands of people live entirely out of their reach. Really very few of us are bent on committing murder, but where a man really has murder in mind, he usually commits the crime regardless of laws or the police. But where we have one man of this unfortunate type, there are thousands of sane minds who prefer to live and let live.

Regardless of the promises of security with which the preparedness advocates make free (providing, of course, we spend our all for arms and munitions) there exists among humans, *nothing so powerful as an idea of right and justice*. The only thing that has survived in the long line of bloody wars, as far back as we have any history of man, is this militant idea of right. And powerful as is the war craze in some individuals, even though backed with force of arms, it is *not so powerful as the instinct against and disapproval of war in the better class of humanity*.

Norwich
Automatic
Feeder
Four Sizes

Prevent Stampeding In The Brooder House —The One Danger Of Brooding In Large Flocks—

Stampeding and crowding at feeding time is completely eliminated by the use of the Norwich Automatic Exerciser and Feeder as the chicks are fed a little at a time and all the time, while the Norwich Automatic Air-Lock Fountain with Cup Guard prevents drowning, supplies an abundance of absolutely fresh clean water, and the constant care, worry and labor of feeding and watering are all reduced to a purely automatic action.

RESULTS—PEACE, QUIET AND COMFORT

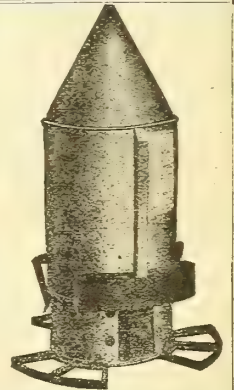

insuring rapid and perfect development and the best and strongest chicks you ever raised, for they must work and exercise for a living just as Nature intended they should. Expert poultrymen know there is nothing that will develop chicks as perfectly or as rapidly as the Norwich Feeder.

Try this method on our guarantee of satisfaction and save the little fellows you are sure to lose where stampeding and crowding is the rule every two hours when hand-fed.

Tell us how many chicks you are going to brood to a flock, and we will tell you exactly how to put the house on an automatic basis that will prevent loss, reduce labor and produce results.

GARDEN GROVE, CAL.

Along this line a recent writer said:

"The great majority live soberly and kindly with one another, asking only to be allowed to earn a fair living and instead of requiring huge establishments to make them behave, they are more often at their wits ends to know how to make their officials behave. They do not get their countries into war. Their officials get their countries into war and then the people have to die to get the country out of war. What keeps the world going is not official authority but the inborn honor, the native worth, the ingrained goodness and faith of common men and women."

For the past year or more we have heard a great deal along the line of war prevention. It is claimed that in order to prevent a fight, it is necessary to get ready to fight. In private life, we find that the man who erects a "spite fence" and threatens to shoot his neighbor for trespass displaying his preparedness by "trusty musket" ready to carry out the threat is the man who has serious trouble with his neighbor—if he does not have to pay for his fun in the electric chair. On the other hand no man who prepares himself for life by treating his neighbor as a fellow human being ever has serious trouble with his neighbor; and he is relieved of the burden of carrying about a loaded gun all the time. It would be a fine thing for us to remember that "valor is stability not of arms and legs but of courage and soul."

On reading some of the theories of those who claim to be so eager to resent wrong doing or injustice, and would plunge a whole nation into war to avenge the loss of one citizen at sea or on a foreign shore, we are reminded of the philanthropist (?) who lends aid for the Christianizing of heathens in foreign lands while he robs everybody right and left at home. The promoter of a "war of righteousness" which goes across seas or invades a foreign country because of "unthinkable conditions" there, and lifts not a hand to prevent far baser and more degrading conditions within our own confines is neither sincere nor righteous but false to the core. Thousands of lives are crushed out annually in factories, stores, mills and tenements under the very noses of those sitting supinely by and advocating that we "clean up Mexico" or the Fiji Islands. True the work which needs doing at our very doors does not instigate wholesale murder of innocents in the work of bettering conditions, while advocating the "righteousness of war" scatters fear among the people and brings political aspirants prominently before the public.

To date, no statistician has been able to even approximately estimate the destruction of the world's wealth in the present European slaughter. Experts tell us that in one hundred year's of peace, this loss cannot be made good. And for this wholesale waste, this illimitable destruction of the world's wealth, for every loss sustained, every man, woman and child must shoulder the burden for generations to come. Because a few "war at any price" officials in Europe could not keep the peace, everywhere here in this country we are today paying the toll.

Prof. Scott Nearing, one of our most

Chases Dirt

"A Revolution in Egg Production." See page 793.

advanced thinkers, in speaking on the futility of military preparedness for the prevention of war, not long ago said: "Preparedness is a double barreled gun and both barrels are aimed directly at democracy. A nation calling itself democratic, which means fraternity and brotherhood, and which dares to furnish others with the means for killing their fellowmen, is digging its own grave."

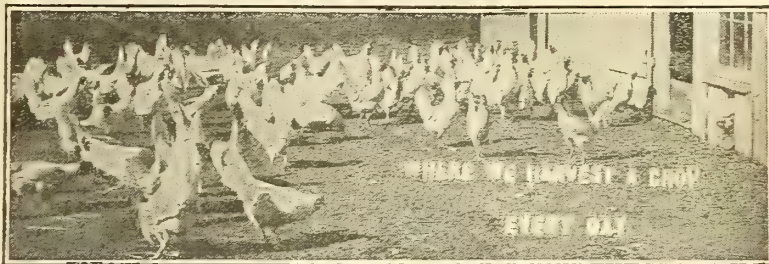

Where not advocated for selfish reasons, military preparedness is nothing more than an appeal to fear. For a good many years the human race has been endeavoring to free itself from the demon of cowardly fear. No matter how instigated or from what foolish cause, fear is an unworthy quality and while in its grip, the victim is wholly incapacitated for constructive work. A contagion of fear is more deadly in its results than many of our most dreaded diseases. Once it gets a start, it spreads like wild fire. A campaign of fear is the leading feature of the preparedness propaganda and is a danger signal of criminal patriotism. Fear is a quality dangerous alike to the individual and to the public good. It is always dangerous and frequently fatal to allow the imagination free scope in a season of suspected peril.

The preparedness advocates make free use of the term 'patriotism,' and it is a high sounding word. In its true sense, patriotism does not foster the rights of any one race or nation above another. When narrowed down to some little corner of the earth or a favored few, it savors of partisanship and provincialism.

In the name of common sense, we prepare against any calamity, as long as we can do so without acting in direct disobedience to the laws of civilization. When we prepare for war, we deliberately prepare to disobey the most universally known law in existence. In every enlightened country it is unlawful to kill one man. By what right do we prepare to kill them by hundreds of thousands? The preparedness view of the matter has been likened to a man who prepares for the winter by laying in a stock of burglar's tools, making himself proficient in their use, and keeping himself informed where the best "hauls" may be made in case his crops fail, or a more capable man takes his job away from him. Most people, however, prefer to prepare for winter or for old age by making themselves more proficient in their chosen line of work and more useful in their community. To be sure, we have a police force in all the great centers of trade, but these officers of the law are not employed for the purpose of killing men. It is their duty so far as in them lies to capture offenders of the law and take them before a court of justice to be tried, and punishment meted out.

For economic reasons, if for no other, military preparedness in the hope of preventing war, is a failure. Emerson says, it is one of the laws of Nature that "whatever is excellent, as God lives, is permanent." In preparedness we set our seal of approval upon savage methods of existence. War's scourge has visited all races of people thru all ages of time. And while the most intelligent men for hundreds of years have voiced their disapproval of this savage method of attempting to settle disputes (for it never settles them) war has gone on fighting war. We might as well attempt to fight fire with fire. Military preparedness is not "excellent," therefore it is never permanent. A spirit of right and justice in

our dealings with men and nations will eventually supercede the reign of terror and preparedness. If the war is to teach us anything, it is the futility of frantic preparation for war among individual nations for the purpose of preventing it. And there is every reason to believe that the sentiment against war as a means of settling disputes will have reached such proportions at the close of the European struggle that human warfare will not again be tolerated. Military preparedness beyond the bounds of sane usefulness to the Nation is nothing more nor less than the product of an hypochondriac hallucination and should everywhere be guarded against. Even a good thing when overdone becomes dangerous. Eating and sleeping are both very necessary to human life, but when carried to excess become dangerous to our well being.

No nation in the history of the world has prevented war by preparing for it. A nation mentally, morally and physically alert needs not "scare methods" nor force of arms to insure it a place in the sun. Military preparedness in any country will continue to be a stick of dynamite in the hands of a child until rigidly controlled by an international court.

SALMON AND MACARONI MOLD.

1 can best salmon, 2 cups macaroni, ¾ cup rich milk, 3 tablespoons flour, 1 cup cracker crumbs, 2 eggs, 1 teaspoon salt, ¼ teaspoon pepper, ½ teaspoon onion juice, 2 tablespoons olive oil.

Parboil the macaroni placing it in boiling water. Keep boiling steadily for twenty minutes. Pour off the water and cover with cold water for a short time. Chop the macaroni and add the cracker crumbs and seasoning. Remove the salmon from the can; drain, remove all bones, shred and mold into a small bowl. Moisten the flour with a bit of the milk and heat the remainder of the milk. Thicken with the flour mixture, being careful to prevent lumping. When thickened, remove from the fire, add the olive oil, stir well and add the beaten eggs and the chopped macaroni. Line a mold with a part of this mixture, filling in the center with the molded salmon. Cover over with more of the macaroni mixture and bake thirty-five minutes in a moderate oven or fifty minutes in a fireless cooker. A steamer mold may be used and in this case about an hour should be allowed for steaming and ten minutes in a hot oven to brown. Serve hot. This is very delicious.

AMERICAN MARMALADE.

1 orange, 1 grapefruit, 1 lemon, 2 small tart apples, equal quantity by measure of sugar.

Shave very thin the orange, grapefruit and lemon, remove all seeds and stringy pulp. Peel and core the apples. Measure these ingredients and three times as much water as fruit. Allow to stand over night. Place in a kettle and allow to boil for ten or fifteen minutes in the morning. Remove the kettle from the stove, put away in a cool place and allow to stand over another night. In the morning add an equal quantity of sugar and cook slowly until it jellies, stirring as little as possible.

AMERICAN DOMINIQUE

Choice breeding stock for sale.

C. W. BESSE - Jefferson, Maine

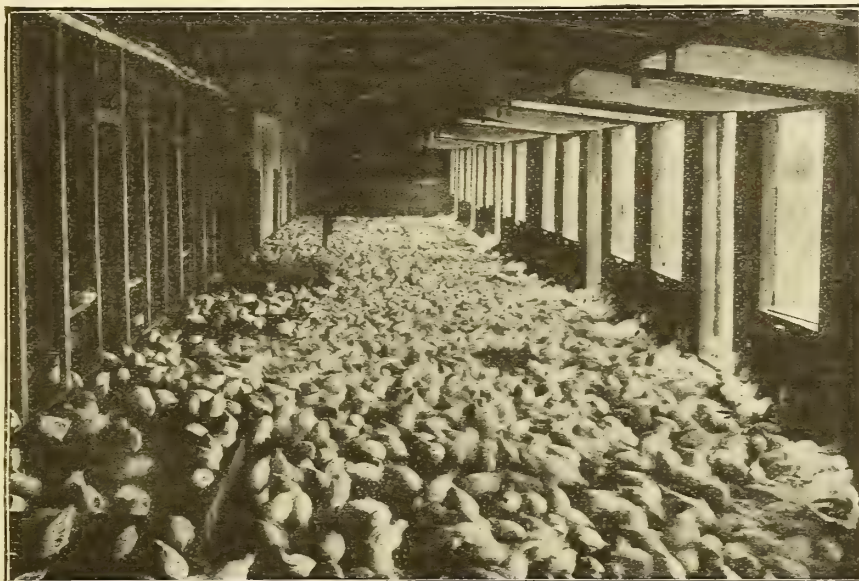

Horticulture for Poultry Keepers

Conducted by Thos. F. Rigg, Iowa Falls, Iowa.

MAY, THE MONTH of planting—the month of hope and promise! It does not matter now how many failures we made last season, all will be well in the year now before us. Personally, we feel that we are going to have a favorable growing season, that the weather is to be all that it should be, that the bugs

I have been making the usual dormant spray, treating the apple, plum, pear and cherry trees with Scalecide. This cleans the trees of all Aphis and other soft body insects which were missed when this dormant spray was given the vines in the fall before covering them for the winter. As I do not wholly uncover the

plication of spray material, and one which should never be omitted, is made not later than ten days after the petals fall from the apple, cherry, plum and pear trees. Spray with one gallon of lime sulphur and one pound of powdered arsenate of lead to fifty gallons of water. If you use arsenate of lead paste put in one and one-half pounds to the fifty gallons of water. Direct the spray

There are 7,000 chicks in the above picture. This picture was taken on the Morse White Leghorn Farm, Belding, Mich., when the chicks were about four weeks old.

and the blight will not be so very bad and that our shrubs and flowers will blossom abundantly, that the fruit vines and bushes and trees will yield a big crop. Of course, we fell all this. And why should we not? The promise of seed time and harvest made so long ago by He who rules over all has never failed the world, as a whole, and we know it will not now. And so we go to work these May mornings in the garden, the vineyard and the orchard with hearts as happy as those of the birds of summer who are merrily singing about us. It is a glorious privilege to be out here in the open, with this stirring of life on every hand, and I thank God that I am so blessed.

* * *

We arrived home from Florida a few weeks ago and found all well in the orchard and among the trees, shrubs and vines. Separated from our grounds by a very narrow strip of land, is the state game preserve. Rabbits and the game animals have learned that they are safe therein. The rabbits come to my orchards by the hundreds and heretofore I have had to protect every fruit tree by wrapping the trunks and some limbs with paper. It was a big job. Last fall I got up courage and tried painting the trees with Sulfocide. It worked to perfection. Not a tree was touched by the rabbits, and I tell you, I feel very good about this.

vines until the buds start in the spring I am unable to give them the Scalecide treatment in the spring, as I would like to do. Perhaps the most important ap-

KITSELMAN BROTHERS
Box 295 MUNCIE, INDIANA.

Which way do you work your garden?

The old
back-breaking
way?

OR

The easy
Planet Jr
way?

The Planet Jr way takes the drudgery out of labor, and produces bigger, better crops. Planet Jr tools are the greatest time-savers ever invented for farm or garden, and the most economical cultivating tools you can use.

No. 4 Planet Jr Combined Hill and Drill Seeder, Wheel-Hoe, Cultivator and Plow pays for itself in a single season in the family garden as well as in larger acreage. Sows all garden seeds (in drills or hills), plows, opens furrows and covers them, hoes and cultivates easily and thoroughly all through the season. We make 32 styles of seed-drills and wheel hoes—various prices.

Fire-Fly Garden Plow is especially useful to owners of small gardens, and to chicken-raisers for plowing up scratching-yards. Its light weight makes it easy for man, woman, or boy to use. Enables the owner of a family garden to do all the work in spare minutes.

New 72-page Catalog (184 illustrations) free!

Describes over 70 tools, including 12 entirely new ones, and improvements to our Seeders, Wheel-Hoes, Horse-Hoes, Harrows, Orchard, Beet- and Pivot-wheel Riding-Cultivators. Write postal for it today.

with good force into the open calyces of the newly formed fruit. If you do not get the poison so located, the worms will not be killed as they enter. For apples and pears, repeating this spray in fourteen days and again in six weeks is well, but I have raised prize fruit by giving the fall and spring dormant spray of Scalecide and using arsenate of lead alone for the spray just after the blossoms fall.

Watch the newly planted and other young trees very closely. In all probability they will be attacked by the Aphis unless they were given the dormant spray of Scalecide. The Aphis is doing full more damage to the orchards of this country than is the so much dreaded San Jose scale. Should the Aphis appear in any of the trees, young or bearing trees, give them a thoro spraying with Black Leaf 40. This will quickly kill these pests. In the use of Black Leaf 40, the most reliable and effective

A Buff Orpington female that has been a consistent winner at New England shows. Bred by Sunset Poultry Yds., Olneyville, R. I.

sulphate of nicotine preparation on the market, use about two pounds of whale oil soap (or any good laundry soap) to ten gallons of water. The soap will cause the spray to stick to the foliage of tree or vine. Be sure to use the Black Leaf 40 strictly according to directions. This is also very effective when used on any vegetable plant which is troubled with sucking insects. For the melon and cucumber louse, it is a complete and sure remedy. I use it with telling effect on all things so affected. Don't know how I could raise melons and squashes and cucumbers and sweet peas without it. I also keep the rose bushes from bugs by its use. I some time ago found that by using Sulfocide, one gallon to two hundred gallons of water, I can completely control the melon and cucumber blight. For spraying grape vines I have found Pyrox very valuable. It is a powerful remedy against eating insects and all fungus diseases and blight. Use this on the vines just as the blossoms fall and repeat from two to four times during the season.

Everywhere I go, I see the currant and gooseberry bushes depleted of their foliage and a loss of the crop. Now the currant worm, while one of the most destructive of all pests, is the easiest of all

to combat. Just as soon as the currant and gooseberry bushes come into full foliage, give them a thoro spraying with arsenate of lead, one and one-half pounds powdered or two and one-half pounds paste arsenate of lead to fifty gallons of water. Be sure to get a large quantity of the spray on the inside of the bush clear down to the ground.

The currant worm comes up out of the crown of the bush and if he gets the poison at the base of the bush he goes no further. If you do a good job now, you need not spray again this season for this insect.

Remember it is a fight all along the line in fruit and vegetable growing and there are certain things you must do or give up the battle.

* * *

I have been reading your articles on fruit culture in the American Poultry Journal for some time and find them most interesting and instructive. Since you have given advice to so many others on fruit problems, I would greatly appreciate your advice on the following matters:

We have been thinking for some time of going into commercial fruit growing, but thought we would like a milder climate and the South or Southwest would perhaps appeal to us more than the East. Would like a place where there is sufficient rainfall.

I have always been very much interested in fruits, but have never lived in a congenial climate for fruit growing. I was raised here in central Iowa, and when of age took up a homestead in Nebraska, latitude about 43, altitude about 2,000 feet, rainfall about 22 inches. Planted a couple of acres to fruit trees, mostly apples, cherries and plums, lived there until trees were in bearing, but late spring frosts took the crop about three out of five years. Some extremely dry years were hard on fruit there. At present we have about one and one-half acres here in the town of Jewell; one acre in strawberries, some apple trees planted around the outside. The rest of the ground is planted to plums in the chicken runs. While the returns from the small patch of ground are satisfactory for the amount of ground in cultivation, we need more for commercial fruit growing.

I would like to ask you what you think of the Ozark region of Missouri? How does it compare with the Piedmont section of Virginia? What do you know about Carter County, Missouri, as a fruit section? Do you think it is good for fruit and poultry? How would it compare with other parts of the Ozark country?

The cheap land, cheap fuel, etc., appeal to us if other conditions for profitable orcharding are favorable. We would expect to sell this place to invest there. We are a family of three. Have a girl nine years old in school. We would have to figure on planting some vegetables and strawberries between the trees, or other fruit trees for quick returns. Are peach trees all right for fillers in an apple orchard? Can you suggest a few varieties in apples, pears and peaches? I would aim to set out only the very best varieties for discriminating markets.

My experience is limited in spraying and pruning as yet, but I expect to learn as I go along. I shall be very grateful for any advice you can give me thru the most excellent American Poultry Journal.

I would also like to ask about the sprays called Scalecide and Pyrox. Could you kindly let me know in answer, soon, where I could get the same? How does Pyrox work on plums and strawberries? Will it take the place of Bordeaux and arsenate of lead in general work? I noticed what you said in American Poultry Journal about the wild crab apple you got from Indiana. I am interested to learn later on how it will behave. I am always interested in new fruits.

I am trying a few plums here, the Omaha, America, Gold, and three of Hanson's productions. We just opened a can of Huska plum and thought it fine. The America will probably fruit this year. We have a few raspberries and they seem to kill back a little. We also have a seedling gooseberry of large size and am going to keep an eye on it to see how it behaves later on.

Geo. Brandvig.

The foregoing letter is written by a man earnestly interested in fruit growing. I like to receive such letters. Every line teems with human interest. I will try and answer the questions in order of asking.

What do I think about the Ozark re-

L. COOK, Originator, OAKVILLE, IOWA

gion of Missouri? I think it is one of the most beautiful and healthful sections in all America. As a fruit producing section it ranks second to none. Here are to be found some of the most profitable apple and peach orchards in the United States. Pear growing has not been developed on a large scale, and I think it would be unwise to plant largely of this fruit in that state.

Carter County is not one of the recognized favorable fruit counties of the state. That is, the orchard development there has not been as great as in some other parts of the Ozarks. My correspondent should not overlook Arkansas, in his search for a new home, as a fruit grower. I believe Benton County, in the Ozarks of Arkansas, to be one of the best apple growing sections in this country. Mr. Brandvig is advised to write to the Secretary of State, Jefferson City, Missouri, and the Secretary of State, Little Rock, Arkansas, asking for booklets issued by the state on the apple growing sections of the two states. These books give only reliable information. Let my correspondent study these books, and then go down and make a very thorough investigation of all conditions.

Do not tie up with any orchard promoting company. Shun those fellows. I know nothing of the promotion company to which you refer, mention of which I have cut from your letter.

In comparing the Ozark country with the Piedmont section of Virginia I am sure one can raise as many and as fine apples in the Ozarks as can be produced in Virginia. But Virginia has an abundance of rainfall, whereas the Ozark country often suffers by a lack of rainfall. Then, too, the Virginia grower is nearer the best markets of the country. This is a very important factor in profitable fruit growing. Personally, I like the Virginia climate the better of the two. I hope, before locating, that my correspondent will carefully investigate both these sections. I am sure he will not make a mistake in locating in either.

Yes, peach trees are all right for fillers in an apple orchard. That is, some men have made a success of so planting, but I believe a large majority of those who have so planted have failed. The peach tree requires different culture and spraying from apples and I strongly advise against this system.

Were I to plant a commercial apple

orchard in Missouri or Arkansas I would plant Stark Delicious, Jonathan and Grimes' Golden. Have trees of Grimes' Golden double worked on Delicious stock. In peaches I would plant Early Elberta, J. H. Hole and Kimmell. Plant only for a few pear trees, Lincoln and Seckel and just a few Keiffer.

For inter-cropping would grow potatoes or some other vegetable crop which could be removed by August first, when a cover crop should be sowed in the orchard, the cover crop to be plowed under the following spring.

You can get Scalecide and Pyrox of any of the seed houses in Des Moines, Iowa. Pyrox is all right for plums and strawberries. It takes the place of Bordeaux mixture and arsenate of lead. Use a weak solution on plum trees.

Trust that in your seedling gooseberry you have a superior fruit. I save all seedling bushes and vines which come up on my place. Some time I may find a very valuable fruit.

* * *

Experts are already killing the peach crop for 1916. Don't you believe it. These fellows who represent the big buyers, will soon be telling us that the

* * *

J. R. Duncan, Secretary Nebraska Horticultural Society, sees a great future for fruit culture in his state. He says:

"Nebraska at present might be termed as entering a period of horticultural awakening. The soil of Nebraska is as rich as any soil in any state. Our farmers have prospered as well as those of any section. In fact they have been making a living so easily growing diversified crops that the growing of fruit has not appealed to them. Especially is this true in the eastern part of the state. Here climate, soil and location have been combined in such a way that fruit is produced which has no superior for flavor, quality, texture, keeping qualities or color.

"Those men who have been engaged in the growing of fruit have demonstrated that the best methods applied to the production of the fruit and preparing it for market will enable Nebraska fruit to successfully meet any competition from any section.

"The Nebraska grower has been getting good living prices for his fruit, and making a profit on his entire investment."

* * *

The 500 delegates to the Northern Illinois Horticultural Society have adopted a new slogan, and it is a good one: "Put Illinois near the head of the list of fruit growing states."

* * *

Oscar Boisen of Douglas County, Nebraska, cleared \$1,744.00 actual net profit from his ten acre grape vineyard in 1915, and expects to do as well or better this season.

* * *

Young man, read this and consider it well. It is from the *St. Louis Times*:

Figures furnished by the Horticultural agent of the Frisco R. R. show that Dr. E. L. Beal, a well-known orchardist, realized \$585 an acre from a 23-acre orchard and netted \$457 an acre. The orchard is located near Republic, Mo.

* * *

All growing plants and trees must have a certain amount of nitrogen, phosphoric acid and potash. Without these they cannot grow or fruit. Just now the fertilizer market is all upside down. The U. S. Government has issued a bulletin showing from what these essential materials are derived. Read it carefully:

Materials Furnishing Nitrogen—Nitrate of Soda; Nitrate of Lime; Sulphate of Ammonia; Calcium Cyanamid; Dried Blood; Tankage; Fish Scrap; Cottonseed Meal; Horn and Hoof Meal; Hair and Wool; Leather Scrap.

Materials Furnishing Phos. Acid—Acid Phosphate; Bone Meal; Phosphatic Guano; Fish Scrap; Bone Tankage.

Materials Furnishing Potash—Potash Salts (from Germany); Unleashed Wood Ashes.

* * *

If you want this season to raise the finest pea crop you ever gathered, cultivate the vines properly and then just as the blossoms fall, give the vines a good supply of liquid fertilizer by using one ounce of nitrate of soda to two gallons of water. Soak the roots well with this once a week for two weeks. I keep a barrel for this purpose and use this fertilizer with good results on many things. It will cause sweet corn to fill out in a surprising way.

* * *

In answer to A. S. Rowe, Ohio, I am sure you can raise pears commercially on the Ohio river bluffs in your state. There are some very successful pear orchards there now. Write your state horticultural college for information as to the best locality, varieties to plant, etc. Grape growing on these bluffs has been on the decline for years. I do not know why.

NEWTOWN GIANT INCUBATOR CORP'N

21, Warsaw Street

Harrisonburg, Virginia

The bees came thru the winter in fine shape. A few days ago I examined each hive and made some of them stronger in stores. In three hives I found that the queens had died and of course it was necessary to arrange for re-queening their stands. I have arrangements with a queen dealer in Texas who supplies me with tested queens thus early in the season, and in a few days the queenless colonies will be given queens. It looks at tho we would have a good year so far as honey production is concerned. The white clover and sweet clover ought to be abundant, owing to the very wet season of 1915. I don't see how I could get along without my bees. I love to work with them. Then they are a great aid to me in fruit raising, and, too, they make me many dollars worth of honey each year. Last year a great many maple trees in this vicinity were broken by the ice and snow. Today the bees are working on these trees gathering the sap which is coming out at the broken spots. They are singing merrily and are making the most of this opportunity.

* * *

I want to urge every home owner who reads these lines to plant liberally of hardy perennials and shrubs this spring. These plants and shrubs once set out are permanent and a source of great satisfaction. In fact no home grounds are complete without such a planting. They are so satisfactory in every way and they are so cheap in price that every one can afford to order a generous supply. Each year I am planting more of them and less of the annuals. Of course, we must have some annuals. We could not well get along without our sweet peas, asters, etc. The list of desirable perennials and flowering and ornamental shrubs is so large, and the climate conditions of the country so varied that I cannot well here name the most desirable varieties. Consult some reliable grower and you will be given proper advice as to the wisest planting to make.

* * *

Not long ago some one asked me what were my favorite hardy flowers. I found that a difficult question to answer, but I think I would hold to the last, my iris, peonies and phlox. I am an enthusiast where these plants are concerned. For several years I have been getting together a collection of these favorites and each year I grow fonder of them. I think that last year the iris presented the most beautiful sight I ever beheld in my gardens. I wish I could be the means of interesting every home owner to plant liberally of these most charming flowers.

* * *

For about five weeks last winter the ground in this vicinity was covered by several inches of ice. As a result the strawberry plants suffered and many of them are severely injured. Those having the least covering of straw seem to be in the best condition.

* * *

Write today for our free illustrated book, "Dollars and Sense in the Poultry Business." It tells the tale. **American School of Poultry Husbandry, Box 51 Mountain Grove, Mo.**

TOM Barron's Winners

All Egg Contests Prove Them

World's Greatest Layers

Are Still at MORRIS FARM
R. 4 - Bridgeport, Conn.

I have the Most Profitable Flock of Poultry in America, and you cannot afford to be without my blood.

Remember, you take my word for nothing. I state only official records made at National Laying Contests.

In Wyandottes—

\$8.69 worth of Eggs by BARON-ESS V, the 282-egg hen, at North American Contest, 1913-14. Four others laid 274, 271, 258 and 252 eggs. The five laid 1337 eggs, an average of 267, or \$8.21 per hen.

I have a flock of 27 Hens that gave net profit per hen of \$4.67. These are the three Contest Pens I bought of Barron, and which he had at Pennsylvania, Connecticut and Missouri. All my Wyandottes are bred from these.

In Leghorns—

I am breeding the Highest Pedigree Cockerels in the World, out of the 288-Hen, winner at Newport, Eng. This affords new Winning blood for the Barron breeder. Others, 284, 256, 253, etc.

In Buff Rocks—

280, 265, 263, 240, etc. I guarantee all contest birds.

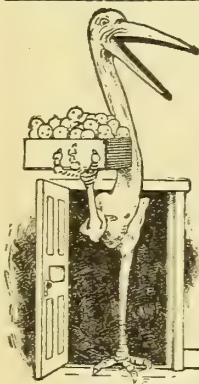

All Breeders tested by Storr's College. Free of white diarrhoea.

SPECIAL REDUCTION

May and June on pedigree chicks, also on eggs. Take advantage of this by ordering early. Half grown stock half price July and August.

BELLA VISTA FARM, Lewes P. Doerhoefer, Prop.
Department A ANCHORAGE, KY.

will kill the tree in a few years. They have done great damage, especially in the eastern states. The beetles are about three-eighths of an inch long, dull yellow in color with a black stripe on each wing. They emerge about the time the leaves appear and feed upon them, eating irregular holes. The leaves turn brown and curl. The larvae crawl down the trunks in July and change to yellow pupae in the ground near the base of the tree. By the end of July the second crop of beetles are out and at work. The control of this beetle is by spraying the foliage when the beetle begins to feed. Be sure that the spray hits the underside of the leaves, for it is there the beetle works. Use one and one-half pounds of powdered arsenate of lead to fifty gallons of water.

* * *

I want to repeat what I said last season: Do not destroy the ladybird beetles. Last spring and summer I received several of these beetles, some being sent by persons making inquiry as to what they were, and telling me they were injuring their trees and vines. There are several kinds of ladybird beetles, one having nine red spots on its black back, another but two, while a third has thirteen black spots on its orange-colored wing-covers, and two white dashes on the back of its neck. The beetles feed on plant lice and scale insects and *should never be killed*. They keep in check many insects which would otherwise do much damage.

* * *

In answer to E. H. White, Vermont: I think you will make a mistake if your purchase a dusting spray outfit. There are a number of such machines on the market, and some of them doing fairly good work. However, I am sure you will be better off if you stick to the liquid spray outfit. It is true that the work of spraying by the dust method is more quickly accomplished. It is also true that it costs more per tree for materials when dusting. You will make no mistake to be guided by the experiences and findings of the vast majority of successful fruit growers and invest in a liquid spray outfit. Mr. White also asks if it would be advisable to make his new apple tree planting of twenty acres largely of McIntosh Red. Those who have read this department in the past know how enthusiastic I am regarding the planting of this apple in Vermont. I would make this new planting two-thirds this variety were I in Mr. White's place. This beautiful and high quality apple is grown to perfection in Vermont, and sells at very high prices in New York and Boston markets. A twenty acre orchard of one-third Baldwin and two-thirds McIntosh Red would be a very valuable one.

* * *

In answer to P. E. Curtis, Pennsylvania: 1. Stayman Winesap is proving to be a very profitable apple for the more elevated sections of your state. You can plant it with assurance of satisfactory returns. 2. Red Cross and Diploma currant are the best market varie-

You surely need some good
stock, eggs or chicks.

ALL WE ASK is that you place some of your orders with us so that you may compare the results of our stock with that of others. You will then know better where to come in future. We challenge any poultry man or breeder to give better quality for same money than we can.

WHY? Because we are breeding poultry as a hobby rather than as a business proposition. When we offer stock for sale we offer it right, because we wish to dispose of it. We don't buy to sell, but we can offer you attractive and reasonable prices on stock, eggs and chicks from quality breeders that are being bred and handled right.

YOU CAN do no better than give us a trial, for we are willing to back all our claims. TRY US.

ties. 3. I cannot tell you what varieties of strawberries are best suited for your planting. Consult your State Station folks. 4. Yes, you can raise a crop of potatoes between the rows of your newly set apple trees, *provided* you get the potatoes off the ground so you can sow a cover crop in the orchard not later than July 15. 5. The Concord, Worden and Moore's Early will give you the most satisfactory returns in the vineyard. 6. I do not know the Clay pear. Never heard of it. Be very careful in deciding upon what varieties of pears to plant. Take this matter up with your State Station authorities. Yes, I would plant two or three of the Lincoln variety. Out here on the prairies it withstands the extremely cold winters, and does not blight even in the most blight-producing weather. But it has not been tried out to any great extent in your state, and it would be unwise for you to plant more than a very few trees of this variety. 7. You are mistaken as to the potato yield in this state. I know of no commercial grower who gets 400 bushels per acre yield. There are lots of fairy tales told about the "golden west." We are getting along pretty well out here, but the land agents are somewhat economical of the truth in their advertising statements.

* * *

As usual the English sparrows have cut down my plum crop more than one-half. Every winter when the ground is covered with snow these birds feed upon the plum buds. It is impossible to fight against the birds, and I suppose I shall have to continue to see them rob me of many bushels of plums each season. I have been trying to figure out some material to spray on these trees which would be distasteful to the sparrow. Wish I could.

* * *

I have a long letter from O. J. Taylor of South Dakota, in which he asks me whether or not he could make the growing of onion sets profitable on his Clay County farm. Having asked the question, Mr. Taylor proceeds to answer it in the affirmative to his own satisfaction. Notwithstanding Mr. Taylor's findings, I am of the opinion that unless he goes into the business on a very large acreage, he will not find his dream coming true. The onion set business is in the hands of a few growers who are favorably located as to land and climate. It is a business which calls for large capital and experience, and grower must be located where he can secure an abundance of cheap labor. I would advise Mr. Taylor to give up the idea of going into this business.

* * *

As I write these lines, a gentle warm rain is falling and the grass on the lawn and the brave plants which have come out of the ground thus early are laughing in glee. This rain will put the ground in splendid shape for the planting of garden seeds. And what fun it is!

Readers Experience Department

Lousy Flocks Should Not Be Tolerated.

EVERYONE who has ever raised chickens knows what trouble lice cause about hatching time. Some of the JOURNAL readers may even be old enough to recall that lice used to infest human beings a good many years ago, especially those who were too indifferent, lazy or dirty to keep their heads clean. These "head lice," as they were called, were circulated in schools thru careless parents and infected children and thus scattered thruout the school. The careful mothers then had to comb and clean and watch for lice the rest of the school year—all because of the neglect of a few careless mothers.

Think what work and worry it made. People never thought much about it then, or at least if they did, they probably thought lice were something humans had to contend with like "chills and fever!"

Well, that is just the way some think about lice among chickens. They think the two are inseparable—and as a general thing, I should say they seem to be. Sifting the matter down, however, everybody ought to realize that lice are a wholly unnecessary accompaniment to poultry raising. It is perfectly plain that every louse has some connection with some other louse, just as every chicken

has a connection or association with some other chicken by means of eggs. Now if you kill all your chickens, it naturally follows that you have none, and never will, till you buy, borrow, or some one brings you some. It's exactly the same way with chicken lice or mites.

You need not have a louse or mite in your poultry houses or pestering the life out of your poultry if you do not want them and are willing to work hard to rid your poultry of them. But in this, as in everything else, eternal vigilance is the price you must pay. It is worth it.

The first proposition is that of killing the lice, for they must every last one be killed, and their nests destroyed, and then you will not have any more until you bring them into your flock by means of eggs or stock. If you are bothered with the little mites or lice that accumulate under the perches or nests, they may be killed merely by touching them with anyone of a number of different preparations. Kerosene, gasolene, crude oil, and many kinds of advertised liquid preparations, are all good and will do the work—but to touch every louse and mite is the trick.

To begin with, clean the poultry house of all droppings and trash, not disturbing where the mites or lice are hidden any more than can be helped, so none will be knocked off and left to begin a

new race of their filthy kind. Carry out the nests as gently as possible and empty the contents on the ground and burn immediately. Have handy a big kettle of boiling water and scald thoroly both the inside and outside of the nest boxes, using as much as a gallon on each nest. Do not leave a dry splinter anywhere about it. After it dries off awhile, look it over carefully to see if there is any sign of crawling life about it, especially about the cracks. If any appear knock the boards a little apart and scald again. If you have a kettle large enough, just dip the nest into the kettle of scalding water.

Next attack the perches. Never use perches nailed tightly down, but if you now have that kind, knock them loose as gently as possible. Place them out on the ground and scald thoroly, turning over and over. Then go inside and scald the droppings boards and the frame they rest on. Make a very thoro job of it. Hot water is cheap, and if you are bent on annihilation of the superfluous hen louse, use it freely—and be sure it is hot.

Now that the furniture is freed of vermin, begin on the house. Cover the sides, ceiling and the floor in every part with whitewash. Take my word for it now, your poultry house and fixtures are clean. Then take each and every bird which is to occupy this tidy apartment.

"SUNLIGHT" POULTRY FARM S.C.W. LEGHORNS

Greatest Known Layers. (Young Strain) PREPAREDNESS

This is the one big question of the present day that is being talked about everywhere in this big country of ours. While the big men of our nation are discussing this question, don't you think it is time for you to prepare for next winter, if you have not already done so, by placing your order for eggs and baby chicks right now? April and May are the ideal months of the year to get out chicks for winter layers. In placing your order with me for eggs and chicks, you are sure of getting them from mature birds that are bred to lay, raised properly, housed in open front houses and on free range the entire year, thus insuring you chicks that live and grow and mature into birds worth while. My birds are strictly utility fowls, altho a good many of my birds go into the shows and win. All eggs and chicks are produced from birds here on the farm and hatched in Candee Mammoth Incubators. Prices are as follows:

Eggs for Hatching

1 Setting of 15 Eggs.....	\$1.50
1 Setting of 50 Eggs.....	3.50

and dust thoroly and individually, with Persian insect powder or any good louse powder, before they are allowed to again take up their quarters within. After cleaning the house you may think yourself tired and decide to allow the dusting of the birds to go over for another day, but if that idea settles down upon you, halt! Think it over. It is not of much avail to fumigate the room of a patient with a contagious disease while he is still suffering with the disease. Cure him first, then fumigate and he will not again contaminate the room.

Now if the foregoing program has been carefully carried out, it is to be hoped that the lice are all killed off and the dead ones won't bother you much and, what is more important, your poultry. But if there happens to be a few scattering ones left on the fowls or in any crevice or a fresh supply hatch out on your birds they will show themselves within a few days, so as you value all your labor to be rid of hen lice, don't give up now. Scald the perches and nests again. Dust the birds again and again and I will guarantee that you will get value for this cleaning up campaign, equal to, if not exceeding, anything you ever have done with your poultry. Keep up the work until you are sure your fowls are free from the pest and examine them often to keep them so.

In getting new stock, bear in mind that your flock is free from pestiferous lice and you have no surety that any other flock is so blessed. Dust well every new comer before given admission to your poultry quarters. Make it your business to know for a certainty that each newly acquired specimen is absolutely free from vermin. I give this advice from having suffered because of not heeding it. I infected my whole flock with lice by introducing a newly bought specimen into the flock and the work of getting rid of that newly acquired crop of lice was sufficiently arduous to impress the lesson indelibly upon my sense of caution.

An important thing to remember in the "no lice" campaign is that every coop used for broodies, brooding or rearing chicks, cockerel pens, and all manner of equipment, if ever previously used for poultry must be put thru the same process as your poultry house, roosts and perches. I would not trust a coop that had stood around for years in snow and wet and freezing weather without first scalding every nook and corner of it. Then I know it is thoroly cleaned and fit to be occupied. I have found old nests and coops that had not been in use for a long time that were infested with living lice—living in hopes, somebody would be fool enough to use them without a thoro cleaning, I suppose.

Once you get your plant free from lice do not go direct from another's poultry house or in handling his poultry to your own. There is grave danger of carrying even one louse with the "empire bug" in her bonnet, and the seeds of millions more of her kind ready to deposit in a foreign field that she might the better exploit her colonization ability.

To some, I suppose, the foregoing method of putting the hen louse to rout may sound quite like some work and too much trouble to be worth it. To such I would suggest that they put themselves in the place of the hen for a few minutes. Think of the broody; true to the mother instinct, sitting thru the untold torture of being eaten to death by these miserable, filthy, unnecessary parasites.

After you think it over for awhile, if you do not have the desire to make a clean sweep of all hen lice and mites from your place, you are not fit to raise poultry and you better quit it.

When poultry is free from lice, they do not require as much food, they are sprightlier, more active, lay better, and I know they must feel better.

Hutsonville, Ill. ADALINE NEWLIN.

Manure, a Profit for the Back Lot Poultry Keeper?

What do you do as a back lot poultry keeper with the manure? Maybe you have a small garden that you use it on; but whatever you do, don't let this item be a waste. Turn it into profit.

I have a friend, a back lot poultryman, who keeps about forty hens. He swaps the droppings to a truck farmer for lettuce heads that have gone to seed. About twice a week when this truck farmer sends his wagon to town, he sends a bunch of lettuce heads to this poultry man, and when a load of manure has accumulated in the bin, his wagon comes by and takes it to the farm.

As for myself, I swap the droppings to a florist. When a load of manure accumulates he sends and gets it. In return when his laborers are cleaning out the flower benches in his hot houses, he saves all the chick weed and tender grasses, which he drops by my home when he sends his truck out to deliver flowers. My, but you should see those chicks go for that chick weed and grass, which are very tender, having been grown in the hot houses and is a very tempting morsel in winter and summer.

Watch the small items in the poultry yard like this manure droppings. Don't allow any waste and loss as far as possible.

Augusta, Ga. LOUIS C. GERCKE.

Indian Runners.

With the entering of the three varieties of Runner ducks into the Standard of Perfection which was passed upon by the American Poultry Association last year, it seems as tho the battle which has encircled this breed of ducks for many years should be at a climax.

There is no doubt that the Runner is an egg machine and well worthy all the interest taken in them by many breeders.

From Chick to Champion

A Revolution
in Egg
Production

RESULTS

A Bull's-Eye

George G. Newell's new book, "A Revolution in Egg Production" tells you how to hit the bull's-eye of *Results*. It shows a method that will

Increase

Your Egg Production

100%

during the molting season and in the winter when you need it most.

It takes nearly all the eggs your hens lay to pay expenses, doesn't it? *Every additional egg you can make them lay is clear profit.*

This book is not a jumble of clippings like many on the poultry industry, but an intelligent, well written guide to success. No man or woman has been in the poultry business so long or knows so much about it that they can afford to pass this offer by.

We said you could increase your egg production 100%. It has been done. *You can do it.*

Don't rack your brain with doubts!

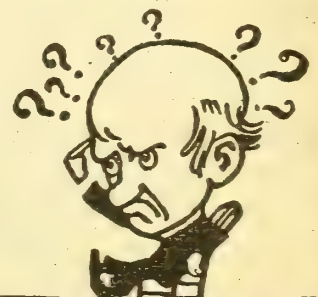

"Procrastination, the thief,
stealeth away thy fortune"

We helped him off the fence.

Some time ago one of the largest exhibitors in Massachusetts wrote us, stating he was "on the fence," for his young "Reds" had not turned out well. He wanted a number of birds to put new blood in his flock and at the same time birds that would win blue ribbons in any show. Suffice to say that this breeder is a consistent winner at New York, Boston and Chicago, and his flock of Reds is "teeming" with Nonpareil blood, for he is a regular customer.

Then there was a Massachusetts breeder who bought one young bird from us. This bird won a blue ribbon at both New York and Boston shows.

One of Ohio's big breeders and exhibitor at the Chicago Coliseum, Cleveland, etc., bought three birds from us. One of these birds, a male, has swept everything before him.

This tells part of the story of why we are steadily climbing, yet it does not begin to tell of all the "big show" winners we have furnished, nor does it tell of the winners furnished for smaller shows, and our personal exhibits and wins made at New York, Boston, etc. Breeders who recognize the type of Red that wins at Chicago, New York or Boston, buy

HUR MERRELL

SOLON MILLS, ILL.

In 1909, the discussion about changing the Standard of the Indian Runner from the dark variety to the light fawn was at its height and the following year the Fawn was admitted as the ideal Runner for the American Standard. Thru the efforts of the Cumberland Penciled and the White Runner clubs, both these varieties were added to the Standard in 1915, the White variety being practically a new one. Each one of the three varieties has its own followers, but for egg production there is little difference, as they are all remarkable layers. A pure bred White Runner never lays anything but a fine white egg.

The Cumberland Runner club claims that the variety they stand for lays only pure white eggs, but there are many penciled ducks that lay a tinted egg, the same as the Fawn and White varieties. However, tinted eggs are getting fewer each year and there are strains of the Fawn Runner that lay only pure white eggs.

The Fawn Runner usually have the largest class in the show room and seem to attract the most attention. They are a study of beautiful shades and graceful curves, erect carriage and long flat heads. There is no difference in a Runner duck egg as far as food value goes, whether it is green tinted or pure white, or which variety of Runners lays the egg. The Texas Experimental Station, after a careful analysis of the Runner egg, announces that it has more nutriment than any other egg and for that reason they are highly recommended for invalids during convalescence. The Cornell Station has recently reported the same analysis. The flavor of a Runner egg is mild and delicious and there is always a ready market for them.

The flesh of the Runner is never stringy, but is tender, with a fine flavor. The skin is yellow, which adds much to the demand. As a table delicacy, they cannot be surpassed. Runners average a goodly number of eggs per year and as they are large in size, it is easy to see the advantage gained in breeding them, from a commercial standpoint.

Breeders should not be forced for eggs during the winter. On most duck farms the breeders are not fed for eggs until the breeding season begins in March. Careful feeding is one of the main essentials either for egg production or strong healthy ducklings. The straw in the litter should be shaken up each day and sufficient warm water supplied to immerse the head when the natural water supply is frozen. Left over mashers should be removed before beginning to sour and every effort made to keep the pens wholesome.

The females weigh four pounds, the males four and one-half. It is not necessary to supply a swimming pool, but they require sufficient water to bathe their heads and clean their nostrils which become stuffed with food. They should be mated one drake with five ducks.

Runners are non-sitters and therefore cannot be depended upon to hatch their own eggs. They may be hatched with either hens or incubators, requiring twenty-eight days to hatch. The ducklings should not be fed for forty-eight hours after hatching. The first feed should consist of bread crumbs moistened with milk and squeezed dry.

White Cornish
MOUNTSVILLE FARMS. - MOUNTVILLE, VA.
(See classified ad on another page)

This may be given every two hours for the first few days. Then add some white middlings or low grade flour, making a sticky mash. Gradually leave out the bread and add corn meal, a little beef scrap and clean coarse sand.

When three weeks old give the following formula four times daily: 1 measure corn meal, 1 measure wheat bran, 1 measure white middlings or flour, 2 measures alfalfa, $\frac{1}{2}$ measure beef scrap, $\frac{1}{4}$ measure sand. If the ducklings have plenty of grass, reduce the alfalfa to one measure. Great care should be taken to prevent duckling from going in the water to bathe, as the result is nearly always fatal.

We make a shallow drinking fountain out of a tin can with a nail hole near the top (about one-half inch from the top), fill the can with water, place a small pan two inches deep over the opening and turn upside down. The youngsters can get enough water to drink from this receptacle, but cannot get in the water. It is far better to water the young ducklings sparingly than to allow them to get wet. In hot weather shade should be provided.

After the ducklings are six weeks old, they should have plenty of water to immerse their heads; grit, charcoal, oyster shell and the beef scrap should be increased and a little salt added to their ration.

Avoid changing the ducks about. It stops them from laying to change from one shelter to another, but nothing stops their laying so quickly as frightening them. The egg yield is always small where the birds are being caught, and looked over, and mated, first here and then there.

The housing of ducks need not be expensive. A piano box on its side may be used to shelter twelve ducks. They should be kept dry and clean. They begin laying at the age of six months. A good feeding formula consists of 1 measure wheat bran, 1 measure corn meal, 1 measure middlings of flour, $1\frac{1}{2}$ measures beef scrap, 1 measure alfalfa and a little salt, mixed together with warm water, if the weather is cold. Beef scrap is high in protein and the amount given should be governed accordingly. If the ducks are not laying, it is safe to add more to the above ration and cut it down after they start laying.

To those who are just beginning in the Runner industry, let me say, it is better to start right with good healthy stock even tho they be few in numbers than to try it out with inferior stock. It is just as cheap to feed a good duck as it is to feed a poor one.

Morristown, N. J. EMIL A. GAEBEL.

The Hen in the Southland.

Nine-tenths of the articles in the poultry magazines and papers having a poultry section which give advice to beginners, also the trials and experiences of others, are all written with a few exceptions by Northern breeders, and while they have a bearing on the subject in a general way, they do not fit our conditions at all; likewise, the quality of the different breeds are unknown to those who have never visited our Southland.

I know of more than one case where judges of renown, while on judging trips South, have pleaded with many breeders to exhibit their birds at the larger shows up North. They even offered to take the birds a month before the shows, train and personally see that the birds are well taken care of; but there are many

Roberts Poultry Farm

drawbacks for the Southern breeder in exhibiting at the larger Northern shows. They have to send the birds a thousand to two thousand miles to the nearest big shows, in the coldest of weather, leaving a temperature of thirty-five to sixty degrees, for one of zero and under; running the risk of snow and rain storms and of losing some of their best birds. Then it breaks right into the middle of the breeding season, as the pens are generally mated up from the 15th of November to the 1st of December, because the poultry shows of the Fall Fairs have created a demand for "hatching eggs," and all the breeders like to get off a few early chicks in January. This, coupled with the fact that the average breeder cannot spare the time and expense in attending these shows and do not feel like sending birds into a colder climate without being along to attend to their comfort, makes it practically impossible for the Southern breeder to be an exhibitor at Northern shows.

HOUSING.

The type of house to use for the breeding pens is the open-front house, without either curtain at the front of the house, or in front of the roosts. The climatic conditions in the South do not demand curtains. The house should be free of draft, positively air tight, back and sides, but should be arranged with a board at the top of the back on hinges, so as to let down during the summer months, giving a circulation of air without a direct draft on the chicks. About as many poultry men face their houses east as they do south, the idea in facing the houses to the east in preference to the south is the fact that we have more hot weather than cold; in summer the houses facing east catch the early morning sun, while the fierce rays of midday and afternoon do not shine directly in the houses, thereby making it unbearable for the hens; but instead, the houses are shady and also furnish shade for a part of the runs. Some may claim that this works bad for the winter months, but when you take into consideration that the coldest part of the day with us is the early morning, the houses facing east catch all the morning sun, while in the afternoon the hens can keep warm by scratching in deep litter or seek the lower end of the run-ways where they can catch the rays of the sun. There are only a few rainy, cold days during the winter months when the hens do not have use of the run-ways.

HATCHING

February and March are the biggest hatching months, as birds hatched at this time make a good growth before the wet season sets in and attain their full growth and best condition in time for the early fall shows, which take place in October and November. Chicks hatched after April 1st do not attain the growth that they should for the fall shows, and the pullets as a rule do not begin to lay before January to February, while those hatched in February and March begin to lay as early as the latter part of August and September.

BROODING.

The brooding of chicks is best done without artificial heat, using fireless outdoor brooders. Care should be taken

for the first week to ten days until the chicks learn to use the fireless hover, letting them out of the hover into the brooder box four or five times a day, for a short stay each time; after about a week they learn to go under the hover and your troubles are over as far as lamps to fill and temperature to watch. Chicks reared in this manner make a surprisingly rapid growth, are more hardy and produce stronger and better stock than the artificially brooded chick.

CARE OF STOCK.

The young stock will come thru the summer months in excellent condition if given a variety of food, plenty of green stuff, and if the lice are kept down. Do not overcrowd, particularly in the roosting quarters, for on the warm summer nights with no breeze stirring the chickens get what is called the "sweats," which stunts them and makes them a prey to all kinds of diseases—colds, sore eye, chicken-pox, etc. With the old stock, the amount of bulky, fattening food should be cut down considerably; if not, the warm weather with too much fattening food will make them lazy and unprofitable to keep on hand.

CULLING.

While culling should be carried on every month in the year, yet the months of September and October are the best culling months. You can then pick out your most promising youngsters, start training and conditioning for the show room; also the undeveloped pullets will be easy to pick out from the precocious ones, which are the birds to keep for the breeding pens.

Atlanta, Ga. **LOUIS C. GERCKE.**

Chick Hatcheries.

Frank L. Platt apparently started something he couldn't finish when he violently criticised the baby chick business in the poultry journal with which he is connected. The trouble is not with the hatcheries. We believe every hatchery is coming as near giving good value for money paid them as in every other line of the poultry business, or any other business, for that matter. They are starting a lot of people with standard bred poultry who might not start in any other way, and are giving good quality for the price. There may be some inferior birds among those they send out, but it is no uncommon thing to get inferior stock from eggs from the big "Who-is-Who" breeders at \$1 per egg. The only feature of the baby chick business that appears to need to be investigated is the advertising of "baby chicks of quality" at an advanced price by someone who pretends to have a hatchery, but who buys them at \$8 or \$10 per hundred to fill the orders.—*The Poultry Record.*

DR. A. C. KING

2013 S. Halsted Street Chicago, Illinois

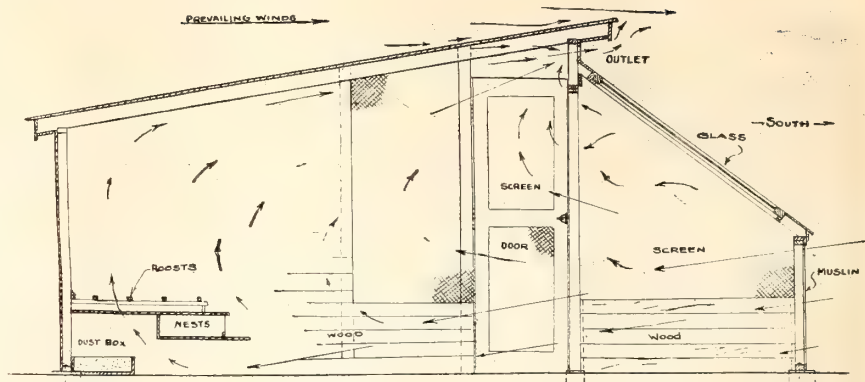

Fig. 2—Shows how the diffused cold air is brought in at the lowest point, is gradually warmed as it gets toward the rear of the house and slowly rises and passes out the outlet prepared, where the suction is greatest.

edges and in the small bays and corners, you will see that it is the same with air currents as they enter the house and sift around partitions and corners.

The drafty house is the one that does not allow the air to enter and go out in a regular defined route or path that you have prepared for it. Every corner, every projecting partition, and every other obstruction in the path of the incoming air will cause eddies, eddies are drafts, they whirl around the corner and being colder, hence heavier than the surrounding air, settle in the corners because they are out of the path of the regular flow. You can hardly do without corners so the thing to do is to regulate the flow of air so that it will have a definite route to

travel, this is what I will endeavor to explain, "Controlling the air currents,"—it is easy.

As the natural front of a poultry house is toward the south, we make that face of the building do the work of letting the air in and taking it out again, you can take it out just as easy as you let it in if you will remember that the prevailing winds in the cold months come from the rear side of the house and can be made to pull the exhausted air out as it blows over the roof. (Fig. 1.)

This is the principle on which all ventilation problems are worked out, take the cold air in at the lowest point, it will be warmed by the bodies of the chickens and gradually rise to the ceil-

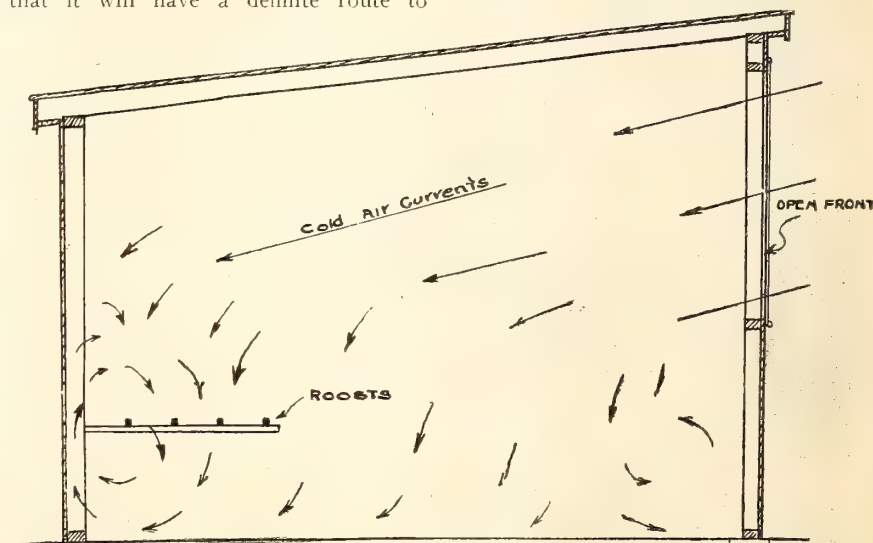

Fig. 3—The usual arrangement. Here only one thing can happen, a down draft on the fowls and a constant draft caused by the whirling of the air at the back of the house. This is a drafty house because there is no definite route for the air to come in and pass out.

ing, if you have prepared for this you will have a small opening or slit right under the roof on the south wall which will help it along at such a rate that there will be a steady even current of fresh air coming in at the bottom and going out at the top without the drafts caused by aimless drifting around, your house will be warmer, for there is no air so cold and death dealing as foul air lying like a blanket of ice over the fowls.

The first question to be settled is how much air to let in, this is always a hard nut to crack, but in the case of the poultry man is comparatively easy, keep your openings protected with muslin down from the top so that the natural flow of the heavy cold air will be along the floor, the muslin will be the very best diffuser of the air currents you could devise, it will stop sudden gusts and steady the flow of the air. If it is possible to make this part of the house extend out from the main house, it is all the better for the control of the air current, the distance of the openings from the roosts being enough to slow up the speed of the flow and keep the air from rushing into corners and sticking around where they are not wanted.

The outlet is what we have to pay attention to, it should be right under the roof line and be narrow and long, this opening must be protected by the overhanging roof against rain, and if the inlets are spaced between windows, have the outlets right over the windows and about as wide. This will help the air to flow out more evenly than if they were over the intakes which always has a tendency to cause a quicker flow of air in these parts of the house, therefore more drafts in the corners with a down draft where the front is closed, the result is, a bunch of busy cold air currents going everywhere but the right place. Figure 2 is a sketch of the house showing how I would arrange the intakes and outlets to get the most perfect ventilation possible without the use of fans to force the air around. It should furnish enough fresh air to make the fowls happy and vigorous and fill them with pepper and enthusiasm for their morning meal.

Fresh air is the greatest health restorer for fowls that we can use, cold drafts and foul air are the surest routes to disaster and sickness in fowls or men, let's all pull for better ventilation for man and beast.

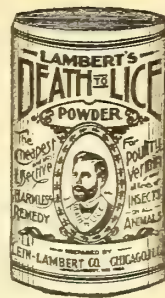

In conclusion let me remind you, keep your muslin covered openings or intakes near the floor of the house and as far from the roosts as possible without destroying the symmetry of the place. Put your outlets on the same side (south side) right under the roof, place these openings over the closed windows and do not make them over 4 inches in height, rather make them 2 inches and about 6 feet long or so. Build all division partitions in the house so that they will simply protect the roosts, use wire the rest of the way. The steeper the slant of the roof from the front back, the better will be the even flow of the air currents.

CONFESSIONS OF AN EX-HUCKSTER.

The "Artificial Discrimination" Made Between Hucksters and Highly Lauded Fanciers by Narrow Visioned Editors is Too Thin to Veil the Eyes of Thinking Poultrymen.

By SHEPARD STRONG, Cleveland, Ohio.

DURING the past six or seven months our poultry journals have given much space and attention to the reports and lists of awards of the season's fairs and shows. I have enjoyed reading them exceedingly and I trust others have found them equally entertaining.

The success or possible failure of each of these exhibitions has been dependent principally on the number and quality of its exhibits. Did you ever stop to think what the motives were, of the different owners of these exhibits, which caused them to make their respective showings? Possibly some few (a small

Dear Mr. Bean:

Last season we bought one of your \$10 Single Comb settings and had good success. We raised two cockerels and three pullets. One of the cockerels was only fair. The other scored 94 and the pullets 96, 94½ and 93½ by Judge Chas. McClave at our recent show. I doubt if this 96-point pullet has an equal in the U. S.

I am inclosing my check, etc.

(Signed) J. A. SHANER.

Asst. P. M.

percent of the whole number of exhibitors) have exhibited for the sport involved in showing their birds, but surely only a very small proportion could have afforded to do so with this end only in view. The great majority must have hoped that directly or indirectly some financial benefit would thereby be derived, and they can without doubt be divided up into these three classes:

First—Those who exhibited for their own educational purposes, desiring to learn the merit of their own birds by comparison with specimens of other contestants.

Second—Those who showed for the advertising value and consequent sale of stock and eggs, which might result from winnings made.

Third—Those who exhibited for the direct gain to them that might ensue by the value of any cash prizes that they might win.

Of course, the gentlemen of the two first classes were glad to be paid any cash prizes to which they were entitled, altho in many instances they only showed one or two specimens. The exhibitor of the last named class hoped to receive enough out of his cash prizes to pay the expenses of transportation, fees, salary of attendant, etc., and have something

JOSEPH MAZELIN - Berne, Ind.

left over for profit, having learned by experience that in order to make things come out right financially he must have quite an extensive and varied exhibit.

There seems to be no questions asked by the "wise lights" of poultrydom as to the legitimacy of the motives of the two classes first mentioned, but as to the exhibitor of the third class, poor fellow, he is quite the talk of the day. Flashing editorials have appeared in some journals decrying the evils of his ways, calling degrading names, including that of "huckster" and urging that for the benefit of mankind, he be removed from the face of the earth. We have even read in these journals copies of pitiful letters from self-professed amateurs describing how this "naughty" professional exhibitor had come along and grabbed away the two or three prizes which he had hoped to win himself in order to get back the two dollars—or thereabouts—which he had invested in the fancy poultry business.

Be it said to the credit of the poultry press, however, that masterly editorials and articles written by poultry journal editors and prominent fanciers have appeared in the best class journals, urging that this attacked class of exhibitors be allowed to remain upon the earth and deal in poultry—at least for a little while longer!

This recent upheaval regarding the big string men, so-called, is simply a resurrection of an old question that has sprung up every few years only to die a natural death. From outbreaks of this nature, the only effects have been that of attracting the attention of fair secretaries toward unfair rulings in competitions. There is reason to believe that some secretaries have been glad of an excuse to materially cut the premium money offered in their poultry departments, or to restrict competition to the county in which the fair was held. As a consequence of this narrowing tendency in that which should be a broadening institution, many of the good fall fair poultry shows have been greatly handicapped.

Notwithstanding the tremendous amount of printer's ink and space given over to condemnation of the hucksters, not one has yet appeared from this so-called dangerous class setting forth the conditions as they are in the huckstering business.

As the writer was for a number of years, in a considerable measure, one of the condemned huckster class, it has been suggested that he prepare a few notes setting forth the circumstances in which such business is conducted, the steps of his descent to the ignoble (?) plane of the huckster or stringman, and accompany it with a few comments on the experience obtained thereby.

When eleven years old I first became

New York City

Commissioners of the District of Columbia

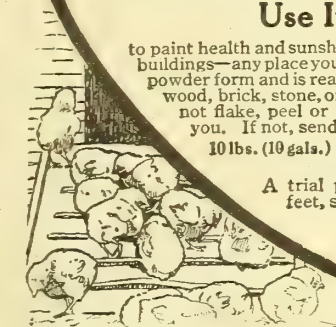

Ocoquan, Va., Feb. 15, 1916

Carbola Chemical Co., Inc.

Gentlemen:—

Some months ago we procured from you some of your "Carbola Disinfecting Germ-Killing White Paint." We made a test on our new breeding house and the result was very satisfactory, indeed. The color is the best white we ever saw. I would not think of using whitewash if it were possible to get "Carbola." I find Carbola will not rub or chip off, neither will it blister or make nesting places for lice, as does white wash. We thank you very much for your prompt filling of our order and will not hesitate to recommend Carbola to poultry breeders.

interested in fancy poultry, thru picking up, by chance, the catalog of a seed man, in the back of which was a poultry section. This "silent salesman" fulfilled its mission in my case, since I acquired without delay an attack of so-called "hen fever," from which I have never recovered. No amount of coaxing on my part prevailed upon my family to allow the purchase of any of these beautiful birds. I was told that my mind should be concentrated upon school work and that the common mongrel fowls which we had were good enough for anybody. In the course of time one of our neighbors purchased some White Leghorns of one of the leading breeders of that time and it came about that I was permitted to purchase three sittings of eggs from this stock. The price was fifty cents per sitting, which at that time and in that locality was considered pretty high. My mother advanced the money, the agreement being that I should earn it by helping with the garden, in which work I was to be credited with five cents per hour.

The 284-egg hen, Barron Leghorn, at Morris Farm, Bridgeport, Conn., R. 4.

I gave the birds the best care and attention and some time later entered two pairs in our local fair, which competition was limited to the county. I shall not soon forget those anxious moments while the committee (of three wise men) was passing upon the worth of the six or seven pairs of White Leghorns and the great pride I felt when the first prize ticket was bestowed by the august chairman upon my coop.

Passing over the second and third year's experience of a "huckster in the making," in my third year I had increased my stock to eight varieties and at the county fair won not alone a number of individual prizes but a special for best collection. I hate to admit the possession of what must have been even then a "sordid mind"—but I must have had one! I cannot recall just how many prize tickets were tied on my coops that

WHITE HOUDANS

EGGS FOR HATCHING

M. L. Starks Dept. A Starks, Wis.

year by the "committee," but I have a clear recollection that the actual cash received for same, amounted to twenty dollars. After this conquest at the county fair, I regarded myself as quite a poultryman and desired to look for broader fields. A premium list of another fair, open to outside competition, came to my notice and I took an exhibit there on our lumber wagon, accompanied by a man who worked on the home farm. We took along forty birds and secured seven firsts and seven seconds, the competition being in pairs, as was the case, usually, in those days. The actual cash represented in the prizes received did not come anyway near paying the expense to which I was put by the trip and I was obliged to use a part of the money which I had saved from previous winnings in order to meet expenses.

And right here is where I fell from grace. On the closing day of the fair I saw outside the poultry hall a large number of coops which were apparently one shipment. There must have been fifty of them, each of which had four or five compartments to the coop. They contained what looked to me at the time very fine fowls of every variety of poultry that I had heard of up to that time, and a great many others beside. It was amazing to me that such an enormous collection could belong to one individual or firm and I decided it to be a government exhibit. A gentleman soon appeared on the scene to feed the birds, and I made myself known and found that the whole outfit was the property of one man. During my talk with this interesting "huckster," he explained to me how he followed up the circuit of fairs and I resolved then and there to increase my number of varieties just as fast as my small capital would permit. I figured that it would be an easy matter to gradually get more stock and more varieties and net from the business a fine income. But in this I was doomed to disappointment.

Instead of the fat profits on which I had counted, my whole poultry venture nearly went to pieces on the rocks. The first year after deciding to radically increase my number of varieties, I was able to purchase first-class stock in four varieties, from which I succeeded in breeding some good stock. In addition I had continued with the varieties which I had been breeding before. Just before the fairs I bought up fifty or more birds wherever the opportunity presented, at an expenditure of a few dollars each. I succeeded in getting together a collection of about one hundred head, which were mostly taken over the road by wagon, but in one or two instances shipped by freight. To say that the venture proved unprofitable is putting it mildly. For several years this continued.

The first real high quality string that I ran up against belonged to the late M. T. Burn of Canada, and what was done to my insignificant representation at that time was a plenty. But I was not discouraged and kept working to improve my stock and increase my show string.

MAKE HENS LAY

LAKEWOOD FARM, HOLLAND, MICHIGAN

SUCCESSFUL EGG FARMING

200 Eggs
A Year
Per Hen

How to Get Them

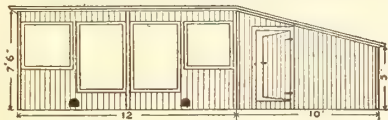

The eighth edition of the book "200 Eggs a Year Per Hen," is now ready. Revised, enlarged, and in part re-written; 96 pages. Containing among other things the method of feeding by which Mr. S. D. Fox of Wolfboro, N. H., won the prize of \$100 in gold offered by the manufacturers of a well-known condition powder for best egg record during the winter months. Simple as a, b, c.—and yet we guarantee it to start hens to laying earlier and to induce them to lay more eggs than any other method under the sun. The book also contains a recipe for egg food and tonic used by Mr. Fox, which brought him in one winter day 68 eggs from 72 hens; and for five days in succession from the same flock 64 eggs a day. Mr. E. F. Chamberlain, of Wolfboro, N. H., says: "By following the methods outlined in your book I obtained 1,496 eggs from 91 R. I. Reds in the month of January." From 14 pullets picked at random out of a farmer's flock the author got 2,999 eggs in one year—an average of over 214 eggs apiece. It has been my ambition in writing "200 Eggs a Year Per Hen" to make it the standard book on egg production and profits in poultry. Tells all there is to know, and tells it in a plain, common-sense way.

Price 50 cents; or with a year's subscription to **AMERICAN POULTRY ADVOCATE**, both for 75 cents; two-years' subscription and book for \$1.00, or given free as a premium for two yearly subscriptions at 50 cents each. Our paper is handsomely illustrated, practical, progressive and up-to-date on poultry matters. Established 1892. 44 to 132 pages monthly. 50 cents a year. 3 months' trial 10 cents. Sample copy free. JOHN GRANT, - Richmond, Illinois

Thornycroft Buff Leghorns

Have won at Madison Square, Pittsburg, Buffalo, New York State Fair, and Hagerstown, within a year. They win in any competition. Write your wants. **THORNYCROFT BUFF LEGHORN FARM WASHINGTON, PA.**

Gradually I culled out all poor stuff and was able to get together a string of about 225 head of good stock for those days. I found that by strict economy I was reaping a small profit and increased in a year or so to nearly five hundred head. In those days I never bought any poor stock, in fact buying as little as possible, as there was small profit in doing so. The going price at that time for first-class specimens that would go out and win was four to five dollars apiece for young birds and five to seven dollars apiece for old. Occasional opportunities would present themselves to purchase good birds at lower prices, but they were few and far between. For three years I went about with this string of four hundred and fifty or more head and made only a living profit, at the end of which time I found it to my advantage to abandon the business.

During these years of association with them I found my competitors with large strings to be royal hearted fellows, always ready to lend a helping hand and with more of the spirit of fraternalism than I have found to exist in other lines of business. The wholesale condemnation of these poultrymen as indulged in by narrow-visioned editors will react against the entire poultry business. But there is a humorous side to it and that lies in the fact that in many instances these so-called "hucksters" are among the most prominent judges at our winter shows. *They are also to be found among our most prominent and highly lauded fanciers.* The "artificial discrimination" (as a recent writer in your columns wisely calls it) made between fanciers and so-called "hucksters" and some others who do not advertise in the muck-raking journals, is too thin to veil the eyes of thinking poultrymen.

To emphasize the good sportsmanship of the huckster poultryman, let me tell you of a happening which took place at the Albany, N. Y., County Fair some ten years ago, at which there were over 2000 head of poultry exhibited by numerous specialty breeders and six or seven exhibitors with car-load lots. The regular judge engaged for the occasion was unable to continue his work after the first half day and the Secretary put the matter up to the exhibitors to decide if he should send for another judge or allow the different exhibitors to judge in varieties in which they did not compete. There was a little discussion of the situation.

TOWN LOT POULTRY KEEPING

By D. D. Cavanaugh

Contains over seventy illustrations and plans of every device a poultry man needs. Complete instructions for building Colony and Poultry Houses, Automatic Release Doors, Trap Nests, Shipping and Exhibition Coops, Hot Water, Hot Air and Fireless Brooders, Automatic Exercisers and Feeders, Troughs, Water Fountains and many other useful devices; also tells how to Produce Winter Eggs. Compound Your Own Food Rations, Produce Feed at 20 Cents a Bushel, Make a Brooder for 1,000 Chicks at a Cost of \$5, How to Brood Chicks Artificially, How to Mate Fowls for Line Breeding, How to Select the Most Profitable Breeds, How to Prepare Fowls for the Show Room and Cure All Defects. Price, 50 Cents a Copy.

Poultry Common Sense

By Henry Trafford

Containing feed formulas of all kinds, general principles in breeding, home treatment of poultry diseases, natural and artificial incubation in addition, to a complete

YEARLY PEN, EGG AND HATCHING RECORD

These copyrighted records are the result of the combined experience of many prominent and successful poultrymen, and they are the simplest and most complete blanks ever devised. Price of "Poultry Common Sense" with records, 50 cents.

Poultry Keeping in a Nutshell

By Henry Trafford

An illustrated book invaluable for beginners, as it covers every phase of the poultry business in a thoro and condensed manner. If followed carefully you start on the road to success. Price, 50 Cents.

Make Your Poultry Pay

It can easily be done by following **The Briggs Method**, the latest and greatest help for poultry raisers in this new fifth edition of his valuable book, **Profits in Poultry Keeping Solved**, Edgar Briggs tells his wonderful secrets and how he made \$350.00 a Month, from 500 Hens.

Briggs did it—time and again. It was no mere accident. Every hen on his place had to pay 70c a month profit, \$8.40 a year, or off went her head. The Briggs System explains how Briggs did it and how you may do it. The simplicity of the Method is truly amazing. Even a few hens will pay proportionately.

Other subjects the Briggs Method covers are: Poultry silage; raising ninety-five per cent of all chicks hatched, running an incubator, erecting the poultry plant, diagrams, pictures, getting early hatches, raising late hatched chicks, getting a large egg yield every month, breeding, feeding, moulting, duck culture, turkey raising, dry mash for little chicks, formula for lice killer, preventing and curing roup, cholera and other bowel troubles, and numerous other secrets of value. Price, \$1.00.

Every Duck Breeder everywhere, beginner or experienced, should possess a copy of the new and enlarged sixth edition of Rankin's

DUCK CULTURE

By James Rankin

Greatest Duck Book Ever Published
100 Pages and Fully Illustrated

Covers every point in incubating, hatching, breeding, feeding, housing and marketing of every variety. Gives Rankin's famous feed formulas. Question Bureau contains 50 questions and answers. Highly authoritative. Price, 75 Cents.

All About Indian Runner Ducks

Latest, most practical and reliable book published on **The World's Greatest Egg Producers**.

The author of this valuable book is Mrs. D. O. Teasley, a duck breeder of national reputation, assisted by Mrs. Andrew Brooks, Mrs. U. R. Fishel, Mrs. Geo. E. Simpson and others, all duck raisers of practical experience, who have been very successful.

This book has separate chapters on the American Fawn and White, the English Penciled and the Pure White Runners, giving the relative merits of each.

Partial List of Contents

Origin and history; the three varieties—English Penciled, Fawn and White and White; claims for the Indian Runner; incubation and hatching; brooding; feeding and care; houses and housing; mating; marketing; questions and answers; duck don'ts, and experiences of duck breeders. Price, 75 Cents.

Order these books from American Poultry Journal Publishing Co., 542 So. Dearborn St., Chicago, Ill.

ation and the decision was unanimous to select two of the largest exhibitors (they need not be ashamed to have their names mentioned—John Kriner and W. G. Minich) to jointly judge all classes regardless of whether they owned birds in them or not. I wish to go on record as stating that I never saw a show judged more fairly and with less dissatisfaction on the part of all the exhibitors than was that one.

It has been my experience that the specialty breeders of judgment and experience have no objection to the big string men, but on the contrary favor their showing, as it balances up the show and makes it more attractive to the public. The objection is plainly conceived in the narrow confines of a selfish mind and is opposed to the best interests of the poultry industry.

All this recent agitation regarding investigations of breeders by a committee, and the exhibiting of large strings for cash prizes, and worked up to the highest pitch by benevolent (?) editors is doomed to no more far reaching effect than to lessen the entries at the fall fairs (due to the cutting of prize money and confining of competition to a more limited territory) and the possible investigation of the motives of this committee and those who backed them.

Furthermore, the lessening of entries at these fairs will only be temporary, as any fair minded management might adopt such a policy on trial, but will sooner or later see the error of it. The suggestion that the American Poultry Association should advance any legislation recommending that large exhibits of poultry at shows or fairs be barred from admission, is absurd. If the association wishes to give its attention to matters pertaining to fairs, it will be performing a far more useful mission if it will investigate why the entrance fee in the poultry departments at most fairs is several times higher in proportion to the amount of prizes offered, than in any of the other departments.

In conclusion let me say that any writer who states that a man can make a tremendous profit by buying up a lot of birds and exhibiting them at the fairs, does not know what he is talking about. Likewise, any writer who glibly and disparagingly speaks of these exhibitors as "hucksters" in an endeavor to stamp them as undesirable factors in the business, simply because of the large size of their exhibits, is about broad minded enough to call Shakespeare and Dickens "hack writers" for the reason of the large number of their productions.

BUCKEYES.

By **H. W. DEEM, Eaton, Ohio,**
Secretary American Buckeye Club.

THE first question which comes to your mind is which breed of poultry shall I substitute for the one not answering requirement? To the beginner, as well as many experienced poultrymen, these questions arouse a great deal of discussion and debate. The beginner invariably feels he is up against a very hard proposition, while the experienced poultryman often finds it difficult to transfer from one breed to another, fearing he may make a mistake.

The Buckeye was admitted to the Standard eleven years ago, the breed has developed slowly but surely, and now they are bred with the highest possible finish, undisputed qualities of usefulness, shape, color and general appearance strongly appealing to the highest talented artist. We have the goods now. We have what the world wants. A breed that is strictly distinct—different in every way from any other breed of fowl. The only Red breed that holds its rich mahogany color that will not fade, the only breed that has that aristocratic style that is admired by every true lover of poultry, as an egg producing fowl they have no equal, they stand today as the world's greatest utility breed.

The breed has not been advertised. Has only been shown at some of our best shows, yet whenever they are seen or tried out they are liked. Since the breed has reached its present state of excellence, the wise breeders, those that look ahead, are looking around trying to secure breeding stock to use as a foundation strain for their future flock of Buckeyes.

The breed met with great favor at the world's greatest poultry show at the recent World's Fair, November, 1915; also the American Buckeye Club Show, Chicago, December, 1915, where they were carefully examined from every angle by breed critics, judges, poultry journal editors, reporters and the general public.

I strongly urge the beginner to look upon the selection of a breed from a business standpoint. Consider usefulness of the breed first, for after all that is where most of the profit comes from. Buckeyes lay a large light brown egg, are a yellow skin fowl, possess the best formation for broilers and table qualities, they have a small pea comb and small wattles that never freeze—this point alone should appeal to you strongly; the bar of slate in back preserves the rich mahogany color not found in any other Red breed.

I believe I have said enough to interest the unprejudiced in this wonderful breed. The writer has the honor to be the Secretary of the American Buckeye Club and would be pleased to mail the 1916 club catalog to any one on the receipt of eight cents in stamps.

Recent Inventions for Poultrymen

By Lester L. Sargent, Patent Attorney, Washington, D.C.

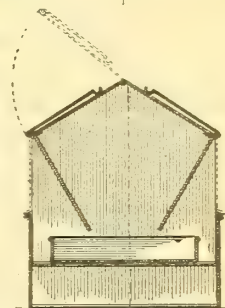

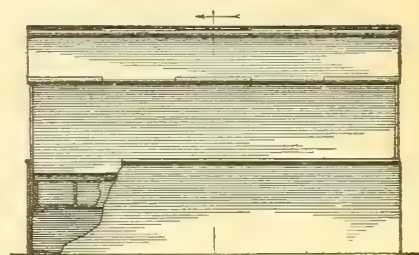

A LEG BAND for fowls, invented by Joseph B. Thomas, Toledo, Ohio, has a lock of simple construction, integral with the leg band. An integral spring catch is arranged within a socket formed by bending inwardly, projections at one end of the band. The other end of the band has spaced slots in one of which the spring catch may engage, the particular one being determined by the size of the leg band desired. The band cannot be removed without destroying it after it is once locked in place. The patent is No. 1,176,181.

A grain sprouter devised by John A. Barhorst, Minster, Ohio, has trays with central flues thru which the hot vapor from the pan of water beneath the lower

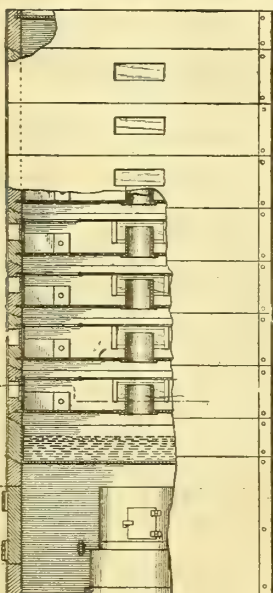

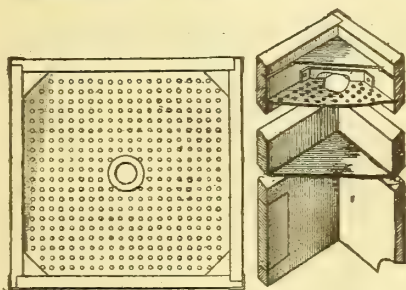

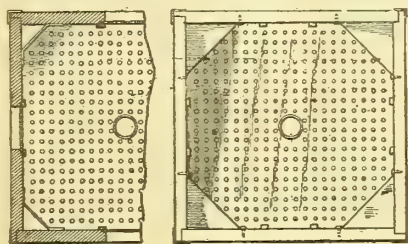

tray may pass readily upward and accelerate the sprouting. Each grain holding tray has a screen bottom and also cut-off corners, thru which the hot vapor may rise as well as thru the central flues. Individual windows are provided for each tray section, in order that the maximum amount of light may be admitted to accelerate the sprouting of the grain. Grain may thus be very quickly sprouted to produce an excellent poultry food. The patent is No. 1,177,564.

Cornelius N. Trompen and Maurice J. Strube, Chicago, Illinois, are joint inventors of a poultry feeder having a hinged roof, slanting hopper sides leading to a shallow feed tray to which the poultry has access from the partially open sides of the feeder structure. The hopper is filled with feed from which it is automatically supplied to the tray by gravity for consumption by the poultry as needed. Patent No. 1,176,256.

A hen's nest device intended to break up sitting hens and cause them to quit the nest has been devised by Harry W. Kemble, Setauket, New York. It comprises a frame having a screen stretched across it, the frame being supported by

heat by the hen for satisfactory sitting and results in her resuming laying or at least abandoning the incubating project. Patent No. 1,175,638.

James R. Hadlington, of Seven Hills, New South Wales, Australia, has obtained United States patent No. 1,176,545 on a chicken brooder. The brooder has a lamp and hot water heating pipes. The usual brooding chamber and heating chamber are provided in the lower central portion of the structure adjacent to one side and provided with a vertical passage. The water pipe extends longitudinally of the chamber from end to

Chicken brooder patented March 21, 1916, by J. R. Hadlington, Seven Hills, New South Wales, Australia, U. S. Patent No. 1,176,545.

end in horizontal position. A passage of reduced vertical extent along the lower portion of the water pipe opens into the previously mentioned vertical passage. End branches from the second vertical passage communicate with outlets thru the ends of the casing. The heated gases, air currents and products of combustion are brought into close engagement or impingement with the lower portion of the water pipe. It is claimed for the device that it obviates the use of a hover and that it contains no passages into which the chickens are apt to crowd. Patent No. 1,176,545.

Questions and Answers

Conducted by
Prince F. Woods, M. D.

Success With Winter Chicks.

Q. Who says it does not pay to raise winter chicks? I had some Buff Orpingtons hatched November 12 and the pullets are now in full lay. Received my first egg on April 1. These birds were kept in a large goods box with south side open and were fed mostly on oats. Lewistown, Ill.

R. M. Seward.

A. Winter chicks are often very satisfactory. In fact some of the finest soft roasting chickens sold in our big Eastern markets in spring and early summer are winter chickens. It is a fact worth noting that even with late hatched winter chickens the pullets generally begin to lay in the spring breeding season, even tho laying maturity is reached at a much earlier age than is common for the breed when chicks are hatched in spring. Season, apparently, has a marked influence on the reproductive functions of most animals.

High Fertility—Low Hatchability.

Q. This season I have had setbacks hitherto unknown to me, by way of in-

cubation, being able to secure only eight chicks from three hatches of incubator and hens combined. All development ceases about end of second week of incubation; still, never before have I had such wonderful fertility. Have small matings, vigorous males and unusually high percentage of fertility, but none hatch.

Most females are pullets, but some are hens, and I find the same result with both and all have been laying for several months on a 50% average, according to trap nests. Since early February I have been trying for chicks with both clucks and incubator, setting each at same time with the same results and identical development under each case, each ceasing after about fifteen days.

All must work in litter for every feed, excepting daily mash, I personally attend to feeding and care. All receive standard scratch feeds and plenty of greens. Mid-day mash consists of bakers-bread moistened, handful chopped onion, salted and seasoned, and an allowance of one tablespoonful to each female.

For some time I have been placing the cause on over-fat condition and for three weeks have made them go on shorter rations. Do you believe that over-fat condition can still be the cause with females continually laying well for several months. Reduced feed gradually when starting and have noticed no decrease in egg production.

Peru, Ill.

F. W.

A. It is not uncommon to find that when hatchability is low the fertility is high; that is in accord with nature's methods of compensation. We do not believe that these birds were over-fat, nor do we believe that the condition which many assume is over-fat will unfavorably influence either fertility or hatchability of eggs produced.

On our home farm two large flocks of White Leghorns and White Rocks have been laying well all winter and the hens are in a condition that many would consider as over-fat. We have been sending one or two cases a week of these eggs to a big hatchery and the incubator expert there reports close to 70% hatches

F. S. SMITH

Box C and D

HAMILTON, OHIO

as average from these eggs. At home we have found the fertility running about 92% and the hatches good, with the chicks strong and vigorous. We believe hens need to be reasonably fat in order to produce well.

We have two pens of fancy fowl shipped here this spring and quite thin on arrival and not yet as plump as we prefer them at this season. The matings are small, the birds are healthy and vigorous, the eggs show fairly good fertility, but the hatches are not nearly as good as those of eggs from our big flocks of quite fat fowls. We do not know the real reason why. But we believe that if we had handled those birds from egg to breeding pen they would be yielding us much better results.

It is possible, of course, that this correspondent was not sufficiently careful when saving eggs for hatching; tho we think it unlikely, as he is an experienced poultryman. Eggs intended for hatching will stand quite a good deal of chilling, but they will not stand much overheating. Overheat the eggs and you start incubation and weaken the germ. Hatching eggs should be kept where the temperature does not fall much below 40 degrees or go above 50 degrees F. Exposure for a number of hours to a temperature of 80 degrees or above, while keeping the eggs, is liable to ruin the chances of a hatch.

We would stop feeding moist mash to this flock, feed chiefly on cracked corn and whole oats. Would avoid bleached or sulphur-processed oats. Would feed cooked meat or a good meat scrap or fish scrap. If scrap is used would mix the fine ground scrap with bran, cornmeal and rolled oats, about equal parts, and use as a dry mash,—keeping it before the fowls. If eggs seem large and watery would feed greens daily but in limited quantity. Would supply plenty of ground raw bone and crushed oyster shells. Would give the birds a large sized outdoor run. The eggs should be taken good care of while saving and during incubation careful handling of machine and hens should be the rule. Fresh fish, well scalded, and fed daily or three times a week as meat food would be helpful.

If medicated drinking water is being used or ointments applied for lice, would discontinue such. It is always difficult to find out the cause when fertility or hatchability goes wrong and when cause is discoverable it can only be successfully sought out by one who is handling the birds.

"Soft-boiled Hatching Eggs."

Q. I bought some \$2 eggs of an Eastern breeder this season and got stung badly. Two of eggs were cracked when they arrived and when I opened them they looked as if they had been soft boiled or dipped in scalding water. I broke all the rest in the sitting and all but three were in same condition. What do you say to that for skinning a sucker?

Pacific Coast Reader.

A. Good friend, we don't believe that any breeder would intentionally sell you "soft-boiled eggs" for hatching purposes. We don't believe very much of all this nonsense about "crooks" and "skinning suckers." We have been identified with the poultry business for a good many years and know a great many fine, honorable and worth-while men and women engaged in poultry breeding. We never met but one "pretended" poultryman who made us ashamed of him and he

is more to be pitied for his folly than anything else.

Now, we ask you to remember that eggs are perishable and easily affected by heat. Express messengers are often very careless and very much rushed. You can bake eggs into such condition as you found your setting quite as easily as one could boil them. It is nearly five days express journey from that breeder's town to your own. At the season the eggs were shipped the steam pipes in express cars are apt to be quite hot. If the package remained for a sufficient length of time near to the steam pipes, the eggs or any part of the contents of the package might easily be heated and baked sufficiently to make the condition of the eggs such as you found them.

Don't be too hasty in assuming dishonesty on part of breeder or in making accusations of "skinning suckers." We don't believe that breeder ever boiled or scalded an egg before shipping same, but we do think that the eggs may easily have been partly baked during shipment, because of careless handling.

Rattling in Throat.

Q. What is wrong with our chickens? They are laying and seem to be in good health, then suddenly begin to breathe hard, next is a rattling noise in throat and they finally choke up and die. We cannot see what is wrong with their throats, no swelling, no inflammation, no cankers, some have warm feet and some cold feet. It does not seem like common colds but all affected breathe very hard on least exertion. Most of

them eat hearty. Cock birds crow and then rattle quite loud, some of them have their throats filled with a clear but slimy substance.

F. C. K.

Charles City, Iowa.

A. Catarrhal troubles showing these symptoms are sometimes infectious and quite frequently appear to be associated with disordered digestion. We would give each affected bird, morning and night, a tablet representing 1/1000 of a grain of arsenite of antimony. Get the birds into open-front quarters and keep houses open day and night. Feed only on hard grains with abundant greens. Clean up and disinfect the poultry houses. Make sure that the feeding grain is clean, free from dust, mould or mustiness and do not feed any spoiled food of any sort. See that litter is clean, dry and free from mould or mustiness.

Chicken Troubles.

Q. I took from my incubator a hatch of 80 chicks. These chicks were fed on chick food three times daily and kept in a brooder in an unoccupied room in our house. Not a chick was lost until they were seven days old, then in about 36 hours I lost 20 of them. They have no diarrhoea, their wings droop, no appetite, will not eat at all and seem cold all the time. After death the crop is empty and no chick seems to live more than 24 hours after taking sick. Do you think this is indigestion or is it bowel disease? Do you think it was caused by going from warm air of brooder to cool air of room? Did I make a mistake

in keeping 80 chicks together? I have no thermometer in brooder, is it necessary to get one? Do you think the feeding was all right? Some poultrymen about here have advised me not to allow the chicks water for first week, would you do this?

R. E. M.

Buena Vista, O.

A. Yours is the usual experience of a novice attempting to raise chicks indoors in a room in a dwelling. Too much confinement, bad air, and indigestion is cause of your loss. There are no symptoms of "bowel trouble." You fed too heavily, kept the chicks too warm and they did not get enough fresh air. Better use a thermometer in your brooder until you are more experienced. You would do better with an outdoor brooder. Eighty chicks can be brooded in one flock all right if brooder is large enough; with colony brooders of coal-heated type 300 do nicely in one flock. But you must have a cool—practically out-door—exercise room. Would try the next broods in an outdoor brooder and get them out on ground before they are a week old, don't let them get chilled by huddling outside the hover. While you can raise fine chicks by keeping food before them all the time; if you attempt regular feeding it should be done regularly and you should not feed too much at one time and not over four times a day. Chicks are more apt to stuff themselves if hand fed than when food is kept before them. When chicks get in shape yours are in, you can't hope to do much for them, they are too far gone. For the first week we like to feed rolled

May and June are Banner Hatching Months

Records show that 75% of all winning Show Birds and valuable Breeders are hatched during these months. Best of all, you can purchase hatching eggs from famous Wilburtha strains at prices that mean a substantial saving. "Wilburtha" means quality, plus. Our S. C. White Leghorns

have won during the past five years 103 out of 132 possible first prizes at the leading Shows. And our other varieties are bred to the same standard. We offer hatching eggs and baby chicks from carefully selected pens of the following breeds:

S. C. White Leghorns

You Don't Need to Have a Hundred or a Thousand of PARKS' Bred-to-and Do-Lay BARRED PLYMOUTH ROCKS to Get a few Great Layers.

Mrs. Lloyd, Kirkwood, Mo., writes: "My pen of Rocks, No. 69, (holding third place) in Missouri Laying Contest, are bred from the two settings of eggs from you in 1914, etc., (100 pens in contest)."

Don't forget that it was a Parks Strain that outlayed all other breeds in last Missouri Contest. Averaging more eggs than the famous English strain did in either Missouri or Storrs Contests. The year previous, a Parks Strain pen finished second, and four years ago Miss Adams' pen, my strain, made laying history, and, better still, they have led in winter month laying in a number of contests; that's where breeding tells and laying counts when eggs are 50 and 60c a doz. They are the Oldest and Greatest Laying strain today. With individual records up to 290 eggs. Continuous laying up to 143 eggs. Small flock averages to 242 eggs, and, best of all, large flock averages up to 298 eggs for 126 birds. They are bred everywhere. Commended by Curtis, Woods, Schwab, Platt, Denny, Prof. Morrison and others. Show winners in five states.

SELECTED EGGS, \$5 per 15, \$8 per 30, \$11 per 50, \$20 per 100. SELECTED UTILITY EGGS, \$2 per 13, \$6 per 50, \$12 per 100.

EGGS AND CHICKS in limited numbers. Let the other fellow have the big orders, but remember us for Quality. Eggs and choice lot of breeders at reduced prices after May 15th. Egg and Chick Circular Free. 40-page catalog, a dime.

L. C. BRACKETT, Mgr. Just-Plucked Egg Farms Co.
Hopkins, Michigan

oats and cracker crumbs rubbed up with hard boiled egg and alternate this with chick food mixed with an equal part of rolled oats. Litter the brooder with cut clover. Air out brooder often and do not chill or overheat the chicks; just keep them comfortable. Get them out for part of day in a small runway just as soon as you can teach them the way in and out of brooder. Do not feed stale, musty or mouldy chicks food. If you cannot get good chick food; get sound wheat, corn, oats and barley equal parts and grind them to chick size in a hand mill and add a little rolled oats to this. Chicks are easily put out of condition and spoiled or stale chick food kills a good many chicks. If chicks must be grown indoors, keep the room well aired, give them a well sanded run, and see that they have a good sod to scratch over or give them a small box of sprouted oats to scratch over and see that these greens are fresh daily. Raw potato for them to pick at is also a help. Keep their brooder clean, keep it well aired and well sunned and do not confine the chicks too closely. Also do not leave them long alone until you have trained them to use the brooder and to go to the hover to warm up. Start the chicks right and keep them comfortable under reasonably good growing conditions and you will not have much trouble with them. Give clean, cool, drinking water from the start.

Diarrhoea in Chicks.

Q. I have some Rhode Island Red chicks from strong, healthy stock. On account of cold weather I thought it necessary to keep them in the cellar near the furnace where the sun comes in through a window. Since the warm weather has come they are in the brooder house, where they get all the sun and air they want. I have been hatching since the last of January and feed them on commercial chick food, fed in dry dirt put inside of brooders. When two weeks old they have the morning chick feed and then about 10 o'clock some chopped raw potatoes and steamed alfalfa mixed with wheat bran until dry. A dry mash in afternoon made up of equal parts by measure of wheat middlings, bran, corn meal, oatmeal with a little bone and charcoal added. When from three to four weeks old they begin to have diarrhoea. I don't know how to doctor them and am having a good deal of trouble.
R. W. H.
West Medway, Mass.

A. Diarrhoea is probably result of indigestion. Would cut out the steamed alfalfa. Instead give them a small box of fresh sprouted oats daily for them to scratch over. Remove all oats left each afternoon. Keep charcoal before the chicks all the time. If diarrhoea is troublesome, stop all food for a day or two and give only scalded sweet milk thickened with boiled flour and seasoned with a little nutmeg. In returning to regular ration do not feed too heavily.

Comb Picking.

Q. (1) I notice among my adult White Leghorns that they pick one's head and comb until it bleeds and then all chase her and pick the bloody head. I have removed the birds as they are attacked from time to time, but they seem to keep right on picking. I have plenty of good fresh meat before them all the while. What do you think is the cause and can you suggest any relief?

Sanitary non-freezing fountains. No lamps. Write for circular.

F. PAGEL Box 123 Rockford, Ill.

A. (1) Cause is probably idleness and too close confinement. You will probably find one or two ringleaders in the flock that start the trouble. Seek them out and get rid of them. Give more yard room. Provide litter to scratch in. Do not crowd the birds. An ointment made of powdered aloes one teaspoonful well rubbed into an ounce of lard and applied to heads of picked birds will help to discourage picking.

Q. (2) Last year in my last hatch the chicks developed a bad case of white diarrhoea. I kept it away from old birds. I have thoroughly sprayed the colony house with disinfectant and scrubbed the incubator out with lye water. Do you think it is safe to use the incubator and brood in same coop? What further disinfection is necessary? North Chili, N. Y. E. T. S.

A. (2) We use a strong solution of pyrocarbol or creolin to wash out incubators. For colony coop use a good lime wash or some good disinfecting cold water paint. If disinfection is thorough, we do not believe you will have trouble.

Partnership and Other Questions.

Q. (1) I am a young man and have two years' experience in raising and keeping laying stock. Have been successful and I believe poultry is my life work. There is a lady who asked me to come to her farm and build up a poultry plant and be the manager. Neither of us have an idea what kind of a trade we should make. She has the land, two incubators (total capacity 390 eggs) and three brooders (capacity 50 chicks each) and one laying house in bad repair (value about \$40). She is willing to do part of the hatching and I am to do the rest of the work. I have two incubators (total capacity 150) and eight brooders (total capacity 400). What part of the profit should she have, if I pay half the expenses and she furnishes me with board and room? She furnishes the land and I do all the work.

A. (1) We don't like partnerships of that sort in poultry work, as they seldom work out well. As you state the case it would probably be fair if you were both to share equally in the profits.

Q. (2) What kind of a trade would you advise us to make?

A. (2) That is a pretty tall order for us as we do not know either of you or the conditions. You might turn in your equipment on a written agreement as a loan for say one year, to be purchased by the owner of the farm at a stipulated price at end of year in case partnership proves satisfactory. We would suggest that the farm owner pay you a small salary per month in addition to your board and room, that she pay the expenses of the farm for the year of your agreement, that she receive three-fourths and yourself one-fourth of any net profits that may be made during the first year of partnership. At the end of twelve months you will both have a better understanding of the situation and you will be in a position to know what you want to do about going on with the work and what terms will be best for a partnership agreement for a longer period. Whatever you do put your agreement in writing, in duplicate, and each keep a copy.

Q. (3) Do White Orpington eggs hatch brown or black chicks very often?

A. (3) White Orpington chicks when just hatched may be smoky gray in

Get Two Eggs Now Where You Got One Before

Every hen you own should to be laying an egg a day, **NOW**. May is one of the best months in the year for eggs.

Climatic conditions are at their best and with the **RIGHT FEED** and the right fowls, you should be getting **TWO EGGS WHERE YOU GOT ONLY ONE BEFORE**.

By that we mean, getting double the number of eggs over ordinary, old fashioned feeding methods.

Give your flock a little more attention—more care in selecting the feed you feed, housing, watering, etc., — all of these are necessary to get **BIG EGG YIELDS**.

Cull out the broody hens—the few eggs they lay during summer won't pay for their feed the rest of the year.

Cull out the early moulters—they are idle so long that the eggs they lay won't pay for feed and care.

Now, with a flock of vigorous, active birds and a feed like

SCHUMACHER Scratch Grains

you have the necessary combination for big egg yields. Separate your flock as suggested above and then try this feeding plan for say 30 days. The test won't cost you any more, if as much as the feed you are now using and we know you will be more than pleased with results.

In the morning, feed five or six quarts of Schumacher Scratch Grains to each 100 hens. Scatter it in deep litter to furnish exercise for your hens. At noon give them three or four quarts of sprouted oats (dry) and keep Schumacher Mash Feed in the hopper all the time. At night give them ten to twelve quarts of Schumacher Scratch Grains. Don't let them go to roost hungry. See that they

have plenty of fresh water—eggs, you know, are 60% water. Give them proper housing; keep them in lice-free, sanitary quarters and you will soon **double your egg yield**.

SCHUMACHER Little Chick Feed (Contains Oatmeal)

is the most ideal feed for baby chicks you can buy. Our feed experts have worked a long time to produce a feed which will agree with the sensitive baby chick digestion, thereby overcoming the heavy loss and at the same time make fast, big, strong, healthy growth. Big poultry raisers say it has no equal. It will pay you to try it. Our feeds are sold by most dealers. If yours can't supply you, write us.

Semi-Solid Buttermilk Makes Chickens Grow Makes Hens Lay

FED Semi-Solid Buttermilk. It is ordinary buttermilk with 84 pounds of water extracted from each 100 pounds of buttermilk leaving 16 pounds or 98 per cent digestible flesh builder. The character of the buttermilk is in no way changed. Our exclusive process leaves it the same in quality as the fresh buttermilk. All food values retained. Extremely nutritious. Tones up the system without the use of medicine of any kind. Reduces the death rate. Cuts your feed bill. Increases your profits.

BUTTERMILK

Semi-Solid Buttermilk makes hens lay more eggs. Saves the lives of the little chicks. Keeps the bowels regulated and in fact keeps them in a state of perfect health which other feeds fail to do. High in protein (milk sugar) carbo-hydrates, lactic acid, salts and fat. The ideal feed.

Use no fish or meat scraps when feeding Semi-Solid Buttermilk. Lactic acid creates appetite, extracts the food value from other grains, promotes digestion and assimilation and wards off many poultry diseases.

"135 chicks fed on this and have only lost one, and the chicks were the weakest lot I have ever had in my sixteen years experience from an incubator. But they are growing like weeds on rich soil in wet weather, and look as slick as young rabbits."

color or may be canary yellow with parts of down almost brown. Nearly all white fowls throw chicks that are other than white but these chicks usually—the smoky ones almost always—show a good white when feathered.

Q. (4) How should this be explained to the customer?

A. (4) Simply state the facts, you know what the chicks from your stock look like when hatched. You also should know how they develop. Simply describe things as they are. If you are continually crossing strains and "introducing new blood" then the off-colored chicks may not develop into good specimens and in such case you should not be selling hatching eggs.

Q. (5) What is the breeder to do in a case of this kind? R. W. F. Richmond, Ky.

A. (5) If you are breeding pure bred stock, know how to breed it and are breeding in line; you should know the appearance of your chicks when hatched and know how they develop. White fowl bred white and line bred will breed chicks that will—most of them—develop into white specimens—the quality will depend on the stock you are breeding and the experience you possess as a breeder. Until you know what you are breeding and what it will produce you should not attempt to sell breeding stock and eggs for hatching unless simply for utility laying stock at prices of ordinary laying stock. If you cross strains you will get off-colored specimens in most cases. Knowing your stock you should be able to tell your customer what to expect. If he is dissatisfied it is up to you to try to make an adjustment satisfactory to him. It is not reasonable for any customer to expect the chicks from any given lot of eggs to be all of superior quality, but most of them are lead to expect too much. Sell only stock and eggs you believe to be good value for the price asked. When a customer is dissatisfied explain the facts to him, let him see that you desire to give him a square deal and explain that every chick hatched cannot be expected to be a "crackerjack" and that if specimens free from defects were as common as some would have us believe, we should see more of them and the prices would not be so high. But whatever you do, be courteous and do your level best to please and satisfy the customer, even if you do think he is unreasonable.

It is our opinion, however, that a young man with only two years' experience should get more experience before he sets up in business of selling breeding stock and eggs for hatching and that it would be well for him to devote himself to producing good market poultry and eggs at first, with a pen or two of good pure bred stock to line breed and pedigree, develop and exhibit, until he gets more experience and can show results as a breeder.

Preserving Eggs.

Q. I want to preserve my summer eggs for fall sales. I read and am told by some that eggs packed in salt will keep them for several months. Can you recommend this way? How should eggs be preserved? Would like a sure method that is not too expensive. Island, Ky. W. D. E.

A. The salt pack method is seldom very satisfactory. The best method of preserving eggs is the "water-glass method" and nearly all supply houses

and drug stores sell water-glass with complete directions for use. Use only fresh laid, clean eggs. If possible have them from fowls that are not running with a male. See following from Woods' "Poultryman's Formulary."

Sodium Silicate (water-glass syrup)...1 quart
Boiled Water.....9 quarts
Mix. When solution is cool, it is ready to use. Eggs should be packed in stone or glass jars, galvanized iron tanks, clean wooden kegs or other clean containers that are easy to handle and can be kept well covered. Pack eggs in layers, small end down. Pour over them dilute water-glass solution until it stands two or three inches above the topmost layer of eggs. Cover container and set in cold place until eggs are wanted for use. This solution will keep eggs in quite good condition for from six to ten months. Preserved eggs intended for boiling should have the large end pierced with a darning needle before cooking to prevent bursting of egg. Water-glass syrup may be had of your druggist at a cost of about 65 cents to \$1.00 per gallon.

Cholera?

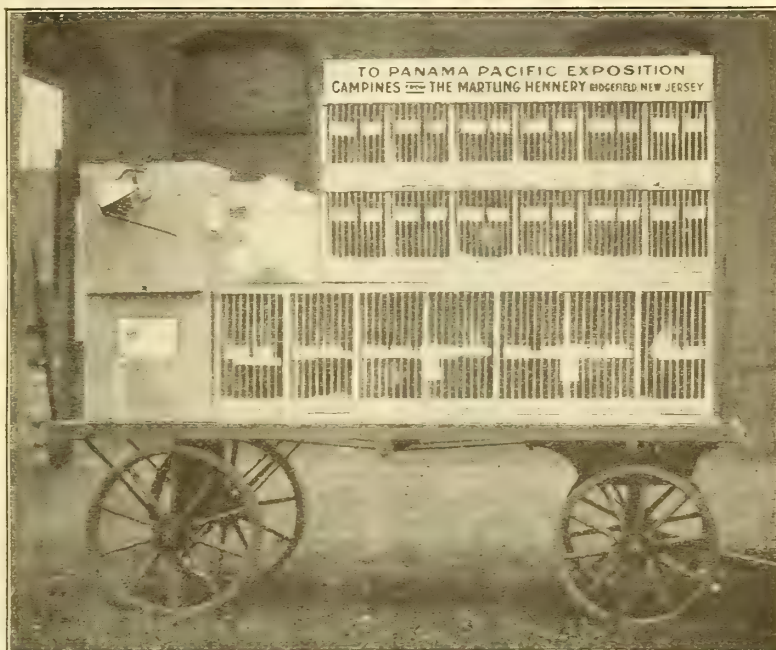

Q. Can you inform me as to what can be done to prevent cholera? I have been bothered with same for several months. I killed off several of my pullets that I thought were infected, in order to prevent the disease from going any further. I cleaned their quarters thoroughly and disinfected with crude carbolic acid. I am very careful how and what I feed. The feathers around vent in half the flock are soiled with droppings. They seem to be happy and lay well. I value the hens highly and would like to save them. They have free range when weather permits.
Creston, S. D.

R. F.

A. We do not believe that the diarrhoea is cholera. If it is cholera the only sure way to get rid of it is to dispose of all birds affected and thoroughly

clean up and disinfect the premises. Think it more likely that your birds have a more or less chronic diarrhoea which results from methods of feeding

is fed. Give plenty of charcoal. Add to dry mash of middlings, low grade flour, corn meal and rolled oats, a teaspoonful of flowers or sulphur to each quart

The shipment of Campines to the Panama-Pacific Exposition poultry show, made by the Martling Hennerly, Ridgefield, N. J.

or from something they get on range. Investigate food carefully. Stop feeding moist mash for present. Be sure that no spoiled food or poor meat food

of mash. Use alternate weeks for about a month. Too much coarse alfalfa in mash sometimes causes a greenish diarrhoea.

Shoemaker Poultry Farm

Indian Runner Ducks, \$2.50 per 11; \$4.50 per 22; \$6.00 per 33.

Buy These Eggs and Hatch Them on Your Own Place. Hatch the Chickens and Win Poultry Success.

Don't Waste Your Money on Baby Chicks

You are almost sure to be disappointed in the outcome if you do, both in number and in the quality of the birds you do succeed in raising. It has recently been discovered that many of the large and widely advertised Baby Chick Hatcheries buy the eggs they hatch the chicks from at 20c to 25c per dozen from farmers' flocks. Also, the hardships through which these poor innocents

must pass in shipping is almost sure to injure them so they can never mature into serviceable breeding birds. We repeat,

BUY SHOEMAKER FARM EGGS

from our high class flocks and hatch the chicks on your own farm. Order today, right from this advertisement.

Send for Our 1916 Book of Poultry

It is not like an ordinary catalog, but a big 200-page text book on poultry breeding in all its branches; no other breeder in the country issues one like it. Write for it today, enclosing 15 cents; or free, if you ask for the book when ordering eggs.

GLOBE INCUBATORS and BROODERS

are the best machines on the market today and we are willing to prove it. Write me today.

F. D. ROGERS, Leghorn Specialist

Formerly of Rogers & Muntz

Douglas Road, ELGIN, ILL.

OUT OF THE EAST.

By P. K. WHITE.

The real successful breeders are the ones who advertise. It is a case of "get in line" or get out.

Spent two very enjoyable days at Lime Rock, Conn., a guest of R. N. Barnum, Foxhurst Farm, and Chas. Hubbard, of Hubbard's Buff Orpington Farm. If I failed to express my appreciation, here it is now.

Many breeders consider advertising as an expense. This is all wrong. The right kind of advertising is a dividend payer.

While in Meriden, Conn., the other day, I called on Mr. Frier, of Frier & Lukins. He is not an advertiser in our journal, but he made mention of something that I am going to repeat for our advertisers benefit. Here it is: "Mr.

One of the deep colored bred-to-lay hens in the 1916 breeding pen B, owned by Muskadosa Stock Farm, Box 132, Pembine, Wis.

White, the AMERICAN POULTRY JOURNAL is entitled to the support of every breeder in the country, for you treat everyone alike and give a complete list of awards of the shows. This is as it should be, and I am doing my part in boosting your journal by making it a practice when I buy anything, it is from someone who advertises in the AMERICAN POULTRY JOURNAL.

Hitching your wagon to a star, means advertising in the AMERICAN POULTRY JOURNAL. The journal that is authoritative and safe.

After five years of hard work, Paul P. Ives, of Guilford, Conn., will in the early fall announce a new variety. It is a fowl that we feel sure will take.

When you're around, they toast you; when absent, they roast you. 'Twas ever thus.

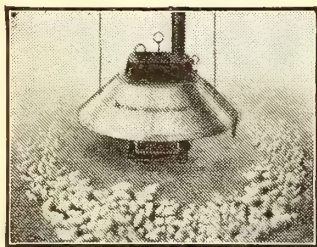

I see that Harlo J. Fiske, like the Arab, has folded his tent and left our midst for new fields.

Rumor has it that W. H. Saart, of Mirimichi Poultry Farm, Foxboro, Mass., will be the next mayor of Attleboro. 'Tis a good pick, say we.

A stork may be all right to look upon, but give me a chicken for a Sunday dinner.

Talk about cold weather? The day I called at Sunset Poultry Farm, Olneyville, R. I., it was so cold that all I could

Hill Colony Brooder, \$30; Magic Brooder, \$15

The highest grade and most efficient brooders in America. It is impossible to succeed raising poultry without Dependable Brooders. Your success is hinged on the brooder, consequently it is to your advantage to buy the best. Our Brooders will positively hold the fire, never leak gas and maintain an even temperature without looking after same in the middle of the night.

We have brooders in stock and can ship on receipt of order. Send for booklet describing the world's greatest brooders.

UNITED BROODER CO., - TRENTON, N. J.

Record 223 Eggs

Trapnested R. & S. C. Reds

Stock from profitable layers is your only guarantee for success in the poultry business. Ask the man who has failed. Our birds are trap-nested and bred to lay and are headed by splendid large, vigorous pedigree red to the bone males, and will undoubtedly produce stock that will put the lay in any flock. Our mating list, giving egg offerings, and describing these, also special pens, combining non-broodiness, high record, and rich red color, will be sent upon request. Write for your copy today.

Muskadosa Stock Farm

Box 132

Pembine, Wis.

do was use the sign language in talking to Mr. Seigel.

We cannot command success, but we can coax it our way by advertising.

Why is everybody shouting for a larger standing army? Why not give 'em seats?

Have a letter informing me that John Spencer, formerly with Schenley Heights Farm, has started a farm of his own at Sharpsville, Pa. Good luck to you, John!

A very uncommon feature of the farm of S. G. McLean, South Glastonbury, Conn., is a setting house. It is built adjoining the exhibition house and granary. It is 40 feet long and 6 feet wide, partitioned into a double row of ten nests.

Chas. H. Wood, whose farm is just outside of Worcester, Mass., has recently plotted a tract of land adjacent to his farm and is building several beautiful homes.

On account of his growing business, Otto J. Eberle, of Pittsburgh, Penn., has just purchased a ten-acre farm in the suburbs of Pittsburgh and will move his plant about May 15th.

Twenty years ago, with but few exceptions, patent medicine people were the only ones who appreciated the power

of advertising. Today it is as hard to find a man who doesn't believe in advertising as it is to find an American man or woman who does not read a newspaper.

Advertising is the atmosphere in which modern business lives. You, our readers, will find that it pays to read the advertisements in our journal and it pays to buy stock, eggs and appliances from people who advertise. If you have anything to buy, see that your purchase is made from an advertiser; for, bear in mind, his or her success is based on satisfying you.

WARNING!

In the March issue of AMERICAN POULTRY JOURNAL, on page 562, appeared the advertising of Meade Mather, Saratoga Springs, New York, who was advertising S. C. Anconas. Altho we had a yearly order for this advertising, no advertising was inserted in our April issue, for the reason we could not get a satisfactory report on this party; but recently evidence has been placed in our hands that convinces us this party is not one whom we can recommend, and would advise our subscribers who contemplate investing in Anconas to deal with some one who has an established reputation and one who does not steal other breeders' illustrations and make claims that are absurd and unreasonable.

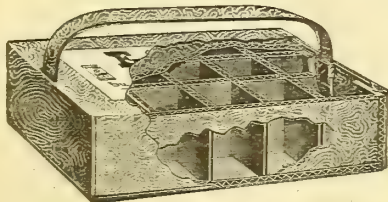

MALAY AND SUMATRA GAMES.

ROBERT H. ROBERTS, Sheboygan, Wis.

THE Malay fowl is one of the oldest breeds in existence, but has not been bred very extensively of recent years. First, on account of the high price of the few really pure bred Malays left in the hands of the true lovers of the breed and secondly the average breeder and fancier has spent no time to dig into the history of any breed and knows

Malay Game cock, first at Chicago, Jan., 1916.

Here's the ideal box for shipping eggs for hatching—

The Eyrie Egg Box Sefton's

There are several interesting features of this box, for instance:

It's made of tough durable paper and every partition is lined with double faced corrugated board, top, bottom and sides.

The wooden handle automatically locks the box; it can't be opened or tampered with.

The partitions are so strong that the box will support an actual weight of over 1000 pounds

The box is attractively printed—space for everything; it's a neat, economical, serviceable box. For express only; not for parcel post.

Ask your paper jobber.

Special Sale of Breeders May 15th

We are about through hatching for this season and must have more room for our early chicks, therefore will sell a limited number of our breeders at less than half price. Sales list ready May 10th. Write for one.

O. M. ABBOTT, Box 10, Whiteland, Ind.

Will you spend a few cents to keep the chicks alive?

EVERY chick that dies cuts down profits. Is it any wonder that wise poultrymen insist on a feed which keeps the chicks alive, without fuss and without uncertainty?

That feed is H-O Steam-Cooked Chick Feed. Prepared from selected cut grains, it builds flesh and bone from the start. Being steam-cooked, it is exceptionally digestible and nourishing. It is the ideal feed for chicks from three days till the chicks get their growth.

N. Y. State Bulletin No. 404 shows that

H-O Steam-Cooked Chick Feed

is above our guarantee in protein, and below the maximum allowed for fibre.

Try it on your next brood. H-O Steam-Cooked Chick Feed is put up in various sized sacks for convenience in use.

Write for free sample, prices and descriptive folder.

Mention AMERICAN POULTRY JOURNAL when writing to advertisers.

very little about the poultry family in general, other than, perhaps, the Standard of Perfection qualities of one or possibly two different strains.

The Malay is truly a beautiful fowl; has a high and proud carriage. The male is a beautiful dark red and green-black and is easily the aristocrat of the poultry family, and is a grand bird, not only to look at, but has qualities no other breed can approach; he weighs from 9½ to 12 lbs. and stands from 28 to 44 inches in height. The females are also high carriage birds, cinnamon brown in color and weigh 7½ to 9½ lbs.

As a table fowl they are unapproachable, flesh is of a very fine fibre and sweet and palatable, characteristic of the game breeds; but a cockerel six to seven months old will weigh as much dressed as any two birds of any of the other game breeds. As layers of large size eggs they are hard to beat. Several

Sumatra Game cockerel, winner of first at Sheboygan. Owned by Robert H. Roberts, Sheboygan, Wis.

hens have egg records of 177 to 208 and pullets 187 to 240.

Any true fancier of the beautiful, as well as the utility qualities of the Malays, will find the height of satisfaction in breeding and raising these wonderful birds. I imported a trio from India a little over four years ago which cost nearly \$1,000 a bird, and I certainly have some wonderful specimens in my yards which can be vouched for by the interest shown during the Greater Chicago Show, where my exhibit attracted more attention than any other at this big show. Yet withal the poultry journals have a habit of omitting awards on Games, Malays and Sumatras, in spite of this fact and that more people will pay to look at such fowls than they will the common market breeds which may be seen in any farm yard or grocery coop.

Dr. H. P. Clarke, of Indianapolis, Ind., the best posted man on Games in the country and the Game judge at the last Greater Chicago Show, marveled at the beauty, true type, wonderful carriage and size of the Malays at this show, which was the first time these birds had been shown in the West, and he stated that one of the Malay cockerels displayed by Mr. Roberts was easily the "best male in the show."

The Black Sumatra Game is also a

wonderful bird, they weigh more than the average Pit Game, are excellent layers of medium size eggs, and one of the most beautiful black breeds in existence. Their semi-erect carriage, beautiful lines and the long back and tail of the male places this breed in a class by itself for beauty. While they are not as rare as the Malays, there is very few really good type birds shown these days for the reason that the breeders are not posted on the qualities they possess and the fascination in breeding and perpetuating rare strains of the poultry family.

Remember the dates—December 13th, 14th, 15th, 16th, 17th and 18th. Show opens on Wednesday and closes Monday night. Premium list November 1st. Entries close November 25th. Address Secretary until November 5th, Indianapolis, Ind., and after November 5th, New Southern Hotel, Chicago, Ill.

CORRECTIONS.

An error was made in last month's issue in the caption appearing under the picture of Partridge Plymouth Rock male owned by Meadow Lawn Poultry Farm, Sand Creek, Mich. This particular bird headed their first young pen at the last Chicago Coliseum Show instead of winning first in the single class, as stated in the April number. However, another bird owned by this farm won first in the open class.

In the ad of F. L. Platt, Swanton, Ohio, in our April issue, it states that E. O. Comfort, a customer, won first cockerel at Boston, 1916, that was bred from eggs purchased of Mr. Platt. Mr. Platt informs us it should have read second cockerel.

The "Collins"

Dr. Heasley Says:

Hatch "Egg Basket Strain" Now

Laid 40% above 200 eggs for a customer

in May and June. This strain of S. C. Buff Leghorns matures quickly—some lay at 4½ months, and many at 5 months. You save feed and get quick profits. Early hatched Leghorns moult in winter when mine are winning and laying. First Pullet at Chicago hatched June 20th. Take this tip from a breeder whose stock won Championship at Chicago, Club Special on Shape at World's Fair, made records of 211-230 and outlaid all Leghorns at Official Egg Contests.

Ten per cent. off mating list May 15th; full reduction June 1st. Save your date for Quality Baby Chicks, Eggs and Stock.

Dr. L. E. Heasley Box A Holland, Mich.

Free Range and Healthy

SINGLE COMB WHITE LEGHORNS SINGLE COMB RHODE ISLAND REDS

CLASSIFIED ADS.

UNDER this heading ads will be inserted for seven cents per word each month for less than three months, and five cents per word each insertion for three months or longer. Changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under **classified headings**. No ads accepted at less than an average of sixty cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Write your copy plainly, as upon this the correctness of your ad largely depends. When placing your ads remember that advertisers using Classified Ads get better returns from AMERICAN POULTRY JOURNAL than from any other poultry journal—none excepted. On writing any of these advertisers mention AMERICAN POULTRY JOURNAL. All copy for Classified Ads must reach us by the 17th of month preceding date of issue.

BARGAIN EXTRAORDINARY. At the Milwaukee Show, January 21st to 26th, 1916, a show that compared favorably with The Coliseum, in White Wyandottes I won 5 out of 6 firsts in the second largest class in the show. I won 1st and 5th cocks; 1st and 2nd hens; 1st cockerel; 1st and 2nd pullet, and 1st old pen. If you question the quality of my Wyandottes, write Judges W. C. Pierce, Theodore Hewes, or Mr. Wells. I have 8 pens mated of the very best Wyandottes in the country, and I will sell eggs from these pens in limited numbers at \$3.50 per setting of 15 eggs—not more than 2 settings to any one customer. If you are interested, place your order early. Frank E. Hering, South Bend, Ind. 3-5

Here is Your Chance to Save Money

Simplex Supply House, Pontiac Building, Chicago, Ill.
Gentlemen:—The Simplex "Faultless" Poultry Feeder ordered from you some time ago has given entire satisfaction and is indeed "faultless" in every particular in our opinion, as is expressed by the enclosed

order for eight more, together with order for twelve Grit Boxes and one-half dozen Dry Mash Feeders, all of which have been tested out to our entire satisfaction.
Thanking you for past courtesies, promptness and square-dealing, I remain,

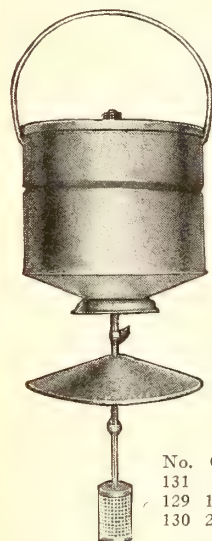

Yours very truly,
S. N. GOLDY.

229 S. 16th St., San Jose, Cal.

6-Quart
only
\$1.20

\$1.60

10 Quarts
The Original

The original "Kant Klog" automatic feeder; feeds anything from millet seed to whole corn, either mixed or separate. Swinging pendulum motion — absolutely adjustable — simply impossible to clog.

Birds peck at grain in bait carrier, swinging pendulum and grain drops from cup under hopper to deflector and then on ground.

No.	Capacity.	Retail Price.	Our Net Price.
131	6-qt.....	\$1.50	\$1.20
129	10-qt.....	2.00	1.60
130	20-qt.....	2.50	2.00

**We Sell Direct from
Factory to Consumer**

**Save 20% to 33 1/3%
By Buying Your Poultry
Appliances from Us**

We specialize in the manufacture of automatic feeders, which save more time and more feed than any other appliance in the poultry yard. No well equipped poultry farm is seen today where automatic feeders are not used. On large farms they save the wages of at least one man. For small flocks they can not be excelled. Filling the feeder once a week is a good deal less work than feeding several times a day. There will be no grain lying around on the ground, no loss from pilfering birds, rats and mice. No staying at home simply to feed the chickens.

In addition to cutting down the feed bills, automatic feeders increase the egg production of the hens. They will be in laying condition at all times, as these feeders give them the proper exercise and they digest every bit of grain they eat.

Be up-to-date and increase the profit from these fowls at least 25% by the use of automatic feeders. Made in styles and sizes shown hereon. We guarantee they give absolute satisfaction. If they do not, we refund the money. That's the guarantee under which we sell all our products—direct to the consumer at wholesale prices.

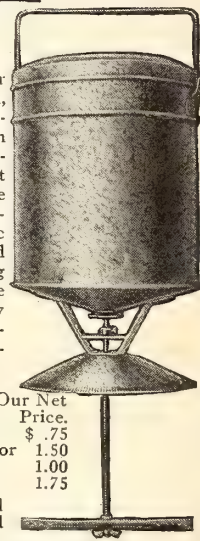

Simplex Supply House

Half-Bushel

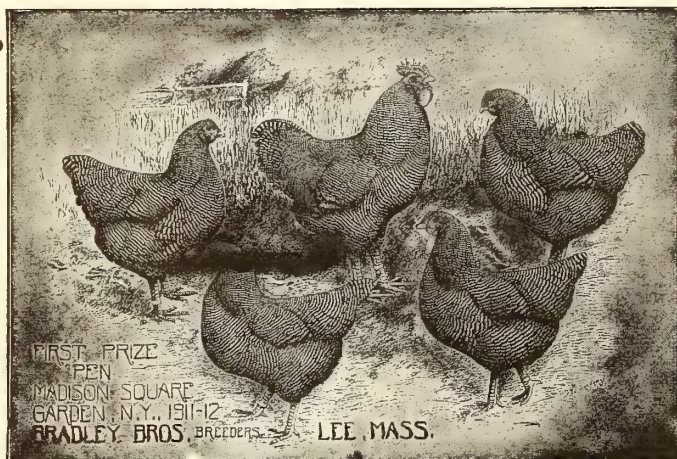

This "Faultless" feeder feeds any kind of grain, either mixed or separate. Rotary pendulum motion, absolutely adjustable and cannot clog. It represents the biggest value ever offered in automatic feeders. Furnished complete, including cover and bail, at the following ridiculously low prices, made possible only by our enormous output:

No.	Capac.	Retail Price.	Our Net Price.
151	5 Qt..	\$1.00	.75
*152	1/4 Bu..	1.00 2 for	1.50
153	1/2 Bu..	1.50	1.00
154	1 Bu..	2.00	1.75

*Note—No. 152 packed two in box and not sold singly.

Our money-saving catalog describing Feeders, Brooders, Incubators, Grain Sprouters, Fountains, Feeding Troughs, Mash Hoppers, Grit Boxes, Brood Coops, Exhibition Coops, Trap Nests, Egg Carriers, Leg Bands and various Remedies and Preparations of merit will be sent upon request or upon receipt of your order from this advertisement.

"At the Canton Show, when the State Barred Rock Club met, we won with your strain, 1st, 3rd and 5th Cockerel; color special on Cockerel; 5th Cock; 2nd Hen; 2nd Pullet and color special on Pullet; also 2nd Cockerel bred Pullet. We won the state cup for the best four exhibition birds, viz.: Cock, Cockerel, Hen and Pullet, and also special ribbon for the State Champion Cockerel. The above winnings were made in a class of nearly 300 Barred Rocks. The 1st Cockerel, 5th Cock and 2nd Hen were from eggs purchased from you."

FRED ANTHONY & SON

November, 1915.

North Lawrence, Ohio.

BRADLEY BROS., LEE, MASS.

Barred P. Rocks

we bred and raised, again hold their place as FIRST WINNERS at many leading shows.

POINTS OF OUR RECORDS AT NEW YORK:

At Madison Square Garden: 4 Firsts, 4 Seconds, 3 Third Prizes, besides other awards have been won by us at a single Madison Square Garden Show. Three times have Males of our breeding won 4 of the Five prizes offered in the class including firsts.

No other exhibitor has ever won THREE FIRST PRIZES at a Madison Square Garden Show where we competed. The highest cash price ever actually paid for a B. P. Rock so far as has come to our knowledge was given for a male we bred and raised.

Three times have Males of our breeding won four of the five prizes offered in the class, including FIRSTS.

At our last Madison Square exhibit, 1911-12, we won 6 prizes on males; 3 prizes on females; both 1st and 2d yards; \$25.00 Cash Special for best display (won by nearly double the points of the closest competitor), also Silver Cup for best pen.

29 of our "Lee Belle" Females have been First Winners at Madison Square Garden Shows alone, and 60 Winning Males at Madison Square Garden Shows have been bred by us.

Many birds have been sent by us to customers in England, Russia, Japan, South Africa and other Foreign Countries. They arrive safely and give good satisfaction.

Eggs for Hatching We are selling eggs for hatching from our best pens at \$10 per 12; \$20 per 26; \$25 per 33. These, we believe, will produce many 1st winners for our customers the coming season. Orders should be booked at once; even for later delivery. \$5 per 12 after June 1st.

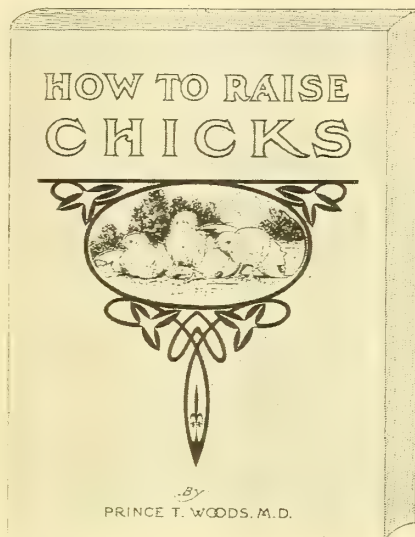

Selected Breeding and Show Birds, Fancy Specimens—Males and Females For Sale. Ringy, blue-tinged, sharp barred birds from our best pens. We never had a finer lot of birds for every demand. Price list free. Illustrated circular free. Our breeders for sale after May 20th, 1916. We do not sell baby chicks.

BRADLEY BROS., Box 909, LEE, MASSACHUSETTS

How to Raise Chicks

By Prince T. Woods, M. D.

Managing Editor American Poultry Journal

A guide to success in this, the most difficult, poultry problem. The results of years of practical experience and study. Written in plain language by a man who knows how, and how to teach others.

This book will save many dollars

for any poultryman, but it is indispensable to the beginner.

It has ten chapters: Chapter I—Selecting and Mating Breeding Stock. Chapter II—Food, Vegetable, Animal and Mineral. Chapter III—Fowls and Food. Chapter IV—Care and Management of Breeders. Chapter V—Eggs for Hatching. Chapter VI—Incubation, Natural and Artificial. Chapter VII—Brooding with Hens and with Brooders. Chapter VIII—Chick Foods and Feeding Chicks. Chapter IX—Growing Chicks. Chapter X—Facts About White Diarrhoea. What white diarrhoea is. Symptoms of disease. Causes. Is there more than one form? Has germ of specific disease been found? Infection. Prevention. Treatment. Formula for a simple remedy which has proved effective in many cases in many climates for years.

Don't go through years of costly and discouraging experiments to learn the facts taught in this book. One chick saved will pay for it. Learn how to feed, how to avoid and prevent disease, how to make your own brooders and chick foods—**how to turn loss into profit.**

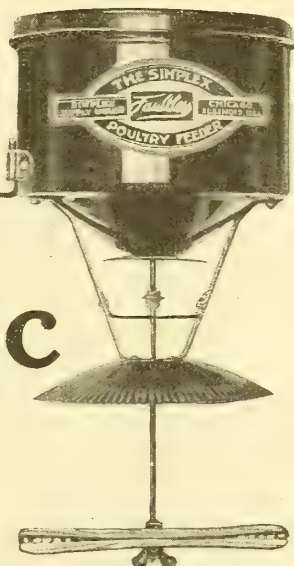

88 pages, 35 illustrations from photographs and pen drawings, printed on good paper, handsomely bound in cloth, price 75c postpaid; with American Poultry Journal, 1 yr., \$1.40. In Canada add 25c for postage; Foreign 50c.

American Poultry Journal Pub. Co., 542 So. Dearborn St., Chicago, Ill.

For
Baby
Chicks

Save the Babies

Reduce Your Loss of Chicks by Feeding Them With a

Simplex "Faultless" Baby Chick Feeder

The greatest contrivance yet invented to take the place of the Cluck in finding food for the little ones; and what's more, they don't have to wait until the hen is successful in finding something for them, neither must they wait for the man with the feed, get weak and lose vitality owing to proper food at the proper time.

The "Faultless" Baby Chick Feeder

is always on the job. It works like a charm, feeds the chicks nice, fresh, clean feed whenever they want it and just enough at a time with just enough exercise to keep them in good condition. Try one now and get more when your chicks start to hatch. Send for our complete catalog and find out about our profit-sharing plan.

E. B. Thompson's Imperial Ringlet Barred Plymouth Rocks

Win at the Imperial Show
of all the World

Madison Square Garden

New York

Dec. 31, 1915 to Jan. 5, 1916

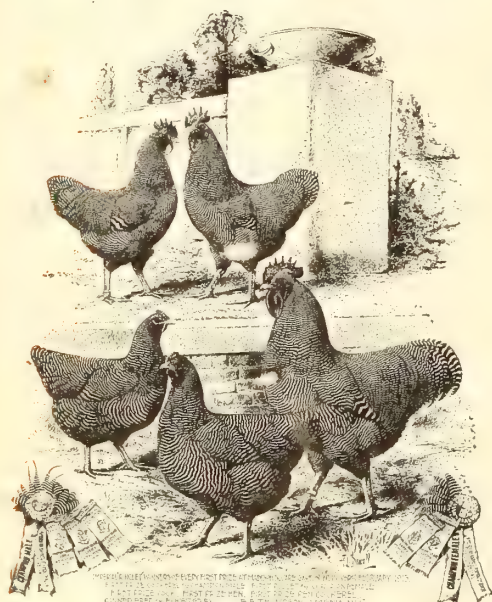

The following matchless record:
All the Ribbons and Prizes offered on
Cocks, Cockerels, Pullets and Exhibition
Pens, viz:

Cocks	1st, 2nd, 3rd, 4th and 5th
Cockerels	1st, 2nd, 3rd, 4th and 5th
Pullets	1st, 2nd, 3rd, 4th and 5th
Exhibition Pens,	1st, 2nd, 3rd, 4th and 5th

Sweepstakes Champion Male and Female. Shape and Color Specials—Male and Female. All Silver Cups and cash Specials. More First, Regular and Special Prizes than any exhibitor of any breed. This is the Capstone to their unexampled record at New York for 28 years.

May and June are the Banner Months to Hatch Silver Cup and 1st Prize Winners.

Dozens of my first prize winners were hatched in May and June. Three of my First Prize Males at the last two Madison Square Garden shows and the five pullets winning **EVERY PRIZE OFFERED**, viz: 1st, 2d, 3d, 4th and 5th, at the 1916 show, were all hatched in June.

Winners of every first prize offered at Madison Square Garden, New York, February, 1915—first cock, first cockerel, first pullet, first hen and first pen cockerel.

My Imperial "Ringlet" Eggs will put you in a position to win at the shows next season.

You may raise a single chick worth hundreds of dollars and capable of winning in the strongest competition—hundreds of my customers have done this.

**My Eggs Are the Best that Money Can Buy
They Produce First Prize Winners.**

Mr. E. B. Thompson

Plainville, Ind., January 3, 1916.

Dear Sir:—I will write and let you know that the Imperial "Ringlet" cockerel I bought of you in December won **FIRST PRIZE** at Plainville and Odon, Indiana, and from the eggs I got of you last spring I raised seven pullets and seven cockerels—**WON 1st and 2d PULLET; 1st PEN; 2d and 3d COCKEREL.** Kindly quote price on one setting of eggs from your best cockerel mating pen.

Yours truly,

FRED LAWYER.

AMERICAN POULTRY JOURNAL

"WE LEAD - OTHERS FOLLOW"

How to Secure Early Winter Egg Producers

Start Now With Your Baby Chicks

PREPARE NOW if you would have eggs in plenty when "strictly fresh" prices are soaring high. The poultry raisers who have learned how to produce winter eggs are those who are making their flocks pay big profits. It's only a matter of correct feeding. Start your baby chicks right if you would be assured of this extra profit, which comes from no other source.

Begin With Red Comb Chick Feed

Then watch the steady, sturdy growth that starts the pullets shelling out eggs and profits before the cold weather sets in—and keeps at it all winter. There's a Red Comb Poultry Feed for every purpose. Each one is a scientifically balanced ration, the result of 46 years' experience. Prepared from the choicest whole grains, mixed by experts, unexcelled for purpose intended.

Red Comb is now used in every part of the United States to make profitable market poultry—to develop layers—to condition show birds. Red Comb contains the minimum of grit—percentage guaranteed on each sack. *With no grit if preferred.* Costs less to feed Red Comb than to buy the materials and mix them yourself.

Let Poultry Experts Tell You the Secret

The names and winnings of these poultry experts are known to poultry raisers everywhere. They represent the highest success in every poultry line—show birds, market birds, layers. Mrs. J. H. Harnly: "The high honors accorded my birds at the Panama-Pacific Exposition proclaim loudly the excellent conditioning value of your Red Comb Feed."

A prominent poultry authority says: "We feed Red Comb," in his paper on "Feeding Chicks From the Shell to the Gravy," in our free book "Feeding Poultry for Profit." This man has a record of making 1000 hens pay a net yearly profit of \$4580.

Winners of 12 blue ribbons at Chicago Coliseum. Big Reduction on Eggs after June 1st.

Cora B. Garbutt Box 146 Darien, Wisconsin

Prizes!

Great Cup and ribbon winners

Eggs!

Persistent all-the-year layers

VIM

Yes, the records prove beyond a doubt that you can depend on

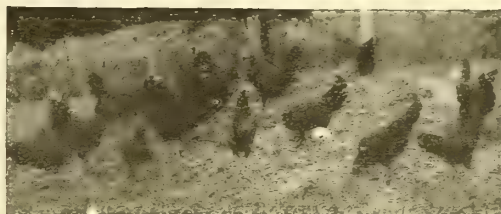

Sheppard's Famous Anconas

to win cups and ribbons—and to lay faithfully winter as well as summer. But—do they start early? Do they cut down the usual wait for results? In other words, **HAVE THEY VIM?** Vim, vigor, vitality — call it what you will —

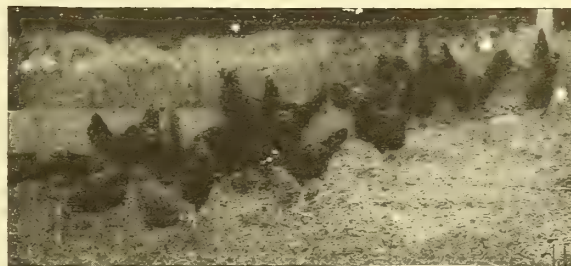

SHEPPARD'S FAMOUS ANCONAS HAVE IT

The first group of pullets laid the eggs that hatched the second group. This second lot were proud parents when 4½ months old! When the vim of Sheppard's Anconas is known—these results, this "quick action," seems not so unusual. Why not breed the kind that begin early, work long and late, have the wonderful egg record of 256 average for a flock, and win prizes at the great shows? **IN ONE BREED!** The Sheppard book tells how to get better results from poultry. You need it. Write for your copy—

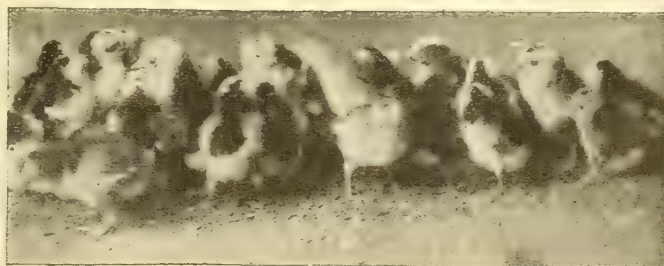

FREE

Laying when 4mo. 7days Old

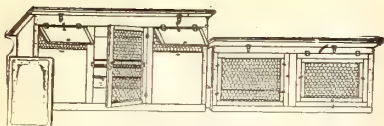

Parents at 4mo. 15 days

E. C. YOUNG COMPANY
6 Depot Street Randolph, Mass.

GET MY PRICE

THIS is the finest, cheapest, most efficient hatcher I have been able to produce after thirty years. Thousands have proven it perfect in heat, moisture and ventilation. Round like a nest, just the right size, 66 eggs, for economy, convenience and results. Fitted with famous Sheer Automatic Fixtures, and guaranteed to hatch every hatchable egg. The 1916

"Peerless-66"

is the only practical, all-metal, fire-proof, everlasting hatcher ever produced.

Make any new or old incubator absolutely automatic with Sheer Fixtures, Automatic Lamp, Regulators, Complete Heating and Ventilating Systems, Incubator Parts, etc. World's standard 25 years. Big Book FREE.

H. M. SHEER COMPANY,
165 Hampshire St., Quincy, Ill.

**WE WANT
YOUR BUSINESS**

An Epitaph:

Following was found written on the tomb of a utility man who advertised bred for show purposes and all 200-egg layers:

"Here lies the truth, because it never came out of him."

The truth may never come out of us often, but in our S. C. Buff and Blue Orpingtons, R. I. Reds, Pheasants, etc., we don't claim to combine eggs and beauty. Send 30 cents for color type catalog.

A handsome book of 368 pages, each 6x8 inches, encumbered with 112 full page illustrations

THE NEW REVISED EDITION of the Standard of Perfection

NOW READY, and will be the only recognized authority on all Standard requirements of American-bred Land and Waterfowl until 1923—eight years in service.

Since 1874 the American Poultry Association has issued under copyright, many editions of the Standard, but this issue is, without doubt, the masterpiece.

It is the one great book most used by judges, fanciers and breeders, and the only recognized authority in awarding prizes in the Poultry Shows of the United States and Canada.

The new edition contains 112 full page illustrations of Chickens, Bantams, Ducks, Geese and Turkeys by America's foremost artists.

A new nomenclature indicating each section of all Standard breeds and varieties—male and female.

A glossary of fifteen pages describing and illustrating many technical terms used by poultry breeders.

A complete list of recognized disqualifications for each American standard-bred breed and variety.

A chapter on cutting for defects. A full and complete standard description of each and every recognized Standard breed of Land and Waterfowl, giving the standard requirements in every section, weight, size, color, markings and shape.

No poultry breeder should be without a copy

Buy a copy and know the standard requirements for all American standard-bred breeds and varieties. Price, cloth, \$2.00; leather, \$2.50. Sent postpaid.

Cloth bound and American Poultry Journal one year **\$2.50**

Leather bound and American Poultry Journal 1 year **\$3.00**

AMERICAN POULTRY JOURNAL PUB. CO., 542 S. Dearborn St., Chicago, Ill.

5000 or more Chicks.....	\$.08½		

THE HATCHING SEASON this year is four to six weeks later than usual on account of cold, wet weather. There will be a heavy demand for later-hatched chicks this year. Of course you are looking for chicks that will mature in time for winter layers, and White Leghorns are the only breed that will mature before winter sets in. I will have 3000 chicks a week for the month of June. Order now, direct from this ad and save time. 80% fertility guaranteed on eggs and safe arrival and full count on chicks. Let me have your order; it will receive my careful attention, prompt shipment, and your approval. Stock for sale at all times. Remember, the "Sweetness of Low Prices" never equals the "Bitterness of Poor Quality." Write your wants. Catalog free.

SUNLIGHT POULTRY FARM - E. N. LEMON, Owner - Lynchburg, Ohio

Schwalge Sectional Incubator

Grow As Your Needs Demand

START WITH ONE SECTION—A complete incubator; add other sections up to ten and you have a mammoth incubator. All sections heated by one lamp—its a great new idea, exclusive with the Schwalge.

SELF-REGULATING, perfected moisture and ventilating system; thermostat regulator keeps uniform temperature—no overheating, no cold spots. Has no equal. Write today for full information.

**Buy at 20 Cents.
Eat when 40 Cents.**

A fresh egg, rubbed or coated with **Egg-O-Latum** and stood on end in any place under 70 degrees, is protected from air, moisture, odors, germs and decay and remains fresh until used, whether a week, a month or a year. Costs but one cent per dozen. No apparatus or special containers or packing. Always ready for use.

Eggs double in price in winter. A 100 per cent profit is sure. The eggs retain their natural color, flavor and freshness.

The coating does not discolor the egg or show when wiped off. Boiling entirely removes the coating. **Egg-O-Latum** is odorless, tasteless, snow white in color, and non-poisonous.

It is air proof, moisture proof, odor proof and germ proof. Economical for regular summer use. Eggs rapidly become stale in warm weather, but, if rubbed with **Egg-O-Latum**, are just as fresh after a week or a month or until used.

Price per jar 50 cents postpaid, or a dealers.
Sufficient for 50 dozen eggs

GEORGE H. LEE CO., 302 Lee Bldg., OMAHA, NEB.

FROM MY COLISEUM, CHICAGO, 1915

SWEEPSTAKE CHAMPIONS

In S. C. White LEGHORNS

1st Cock, Coliseum, 1915

I won the lion's share of honors in the great contest between quality S. C. White Leghorn breeders of the East, West, North and South. Because of the strength of the class competing at the Coliseum, Chicago, no fair-minded man will question the right of my stock to be considered the equal of any strain in the country in exhibition qualities. So far as egg-laying qualities are concerned, they have for years been unsurpassed.

Just Consider That in S. C. White Leghorns at the last Coliseum Show

I won first and third in cocks; I won first young pen.
I won first and fourth in cockerels; I won second and third old pens.
I won the Coliseum silver cup for best 5 cockerels.
I won the Coliseum silver cup for best display.

SILVER CAMPINES

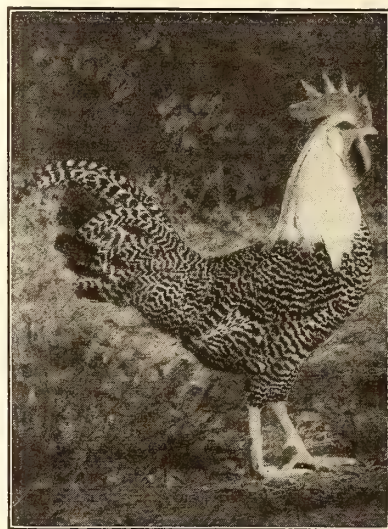

At the last Coliseum Show, Chicago, the very cream of the best fowls of the country were exhibited.

THE CAMPINE CLUB OF AMERICA

held its annual meet at the Coliseum, and the leading breeders of the East, the head-liners in Campinedom, were present with their exhibit. The classes were the very strongest, every one agrees, that have ever been exhibited, and

THE GREATEST HONORS WERE MINE

I won two of the five awards in cockerels.
I won three of the five awards in hens.
I won three of the five awards in pullets.
I won three of the five awards in old pens.
I won three of the five awards in young pens.
I won the challenge cup of the Silver Campine Club of America.
I won the Coliseum cup for best display.
I had 48 Campines entered; 38 were placed.

1st Cockerel, Coliseum, 1914

HATCHING EGGS HATCHING EGGS HATCHING EGGS

LITTLE SILVER, N. J.

AMERICAN POULTRY JOURNAL

VOL. XLVII No. 6

JUNE, 1916

J. H. DREVENSTEDT—PIONEER POULTRYMAN

J. H. DREVENSTEDT, born March 10, 1857. New York City; became interested in poultry, dogs and horticulture at an early age and took up breeding thoroughbred fowl in 1882, Light Brahmas, Games, Houdans and Rouen ducks being the first varieties to command his attention. Took up breeding Silver Wyandottes in 1884; other breeds and varieties bred by him were Light Brahmas, Houdans, Andalusians, Games, Game Bantams, La Fleche, White Wyandottes, Anconas, Leghorns, Black Wyandottes, Campines, Dorkings, Cornish; Rouen, Cayuga and Muscovy ducks, besides testing old and new varieties.

Joined American Poultry Association in 1889 at Buffalo, N. Y. Edited 1898 American Standard of Perfection and was member of all Revision Committees until he resigned from same in 1914. Was editor

Poultry Bulletin, N. Y., in 1880, and until 1893 contributing editor of *Farm Journal*, Philadelphia, after which he established the *American Fancier*, a weekly journal, at Johnstown, N. Y., which several years ago was merged with *American Stock Keeper* of Boston, of which paper he is now poultry editor.

Began judging cattle and poultry in 1885 and officiated at such leading shows as Madison Square Garden since 1891, at Boston Fair 1898, at Hagerstown Fair 1890, with nearly as long service at the Canadian Industrial Exhibition, besides judging the leading and smaller shows in Canadian Northwest, made two Pacific Coast trips, judging in California, Oregon, Washington, Montana and Idaho, also officiated as judge at Worlds Fair, Chicago, and Pan-American, Buffalo, and judged many shows in the South.

Sex Control in Poultry Breeding

CHAPTER III—Physiological Causes. *By Herb E. Sharp*

Copyright, 1916, by Herb E. Sharp and Prince T. Woods.

THE MOST WONDERFUL work of nature is the system by which the individual is reproduced, the lowly bacillus simply enlarges, grows and develops, separates into two parts, each part begins at once to enlarge, swell, or grow—as you will—and repeats the performance. The various stages of growth and development require longer and longer time as the forms of life rise in the scale of Nature. The fowl produces an egg, the germinal cell in that egg divides and develops, during incubation, into a chick; which

breaks it shell and develops or grows into another fowl, mayhap to repeat the performance. The cow and other animals of the higher orders follow a similar tho more complicated process.

The higher animals possess a group of organs that are very highly specialized and worthy of our attention; there are two ovaries, two Fallopian tubes and the uterus. With the fowl there is normally but one ovary and one oviduct which serves the purpose of completing and excluding the egg, while the young chick develops within the egg external to the maternal parent.

The ovary produces an egg cell or ovum, which, in time, ripens or develops and passes thru the tube to the uterus; during this progress from the ovary, if male sperm cells are present, the egg is rendered fertile and under favorable conditions it develops and grows, for a time, until finally there is born a new individual, ready to take up a life of its own. Whether the embryonic development or growth takes place within or external to the mother, the stages of development and final production of a new individual are similar in essentials.

After the egg leaves the ovary until the time when it is fertilized by the male cell, it receives nothing whatever; and, after fertilization, all it receives is what may be necessary for its growth and development. Its nourishment is received from the blood of the mother, there is no direct connection between the blood system of the embryo and the blood system of the mother, but the two systems lie close together. In case of the embryo chick, which is developed within the egg external to the mother, the nourishment is all provided within the egg itself.

For these reasons all the inherent characters, with which the new-born individual is endowed after birth, must have been present within the single cell after the time of fertilization, so that there must have been present at that time some influence which caused the development of certain traits and characters, those which appear later in life, thus that which decides which sex the embryo is to be must have been present at the time of fertilization.

If we ignore the influence which the male sperm cell may impart, we see that whatever sex determinant there is must be present in the ovary, and as these organs are a direct result of heredity we can readily see that their work must also be to some extent in harmony with the work of their antecedents. Considering now the thousands of male sperm cells that must be present at the time of fertilization,—and but one of them is required for fulfilment of its function—it will be highly improbable that, if these male cells carried the sex determinants, these could be evenly divided between males and females; the sperm cells of one male would very probably carry far more male sex determinants than those of another male and the progeny of such a male would, in a long period of time, probably average pretty nearly the same as the sex determinants of his sperm cells.

Inbreeding is well known to strengthen, or increase traits and characters, so if we possess such a male, and follow close breeding, we would probably increase the proportion of male sex determinants in the sperm cells, so that after a time we should have trouble in securing females for breeding pur-

poses. The progeny of a male that carried say nine to one would probably average about nine males to one female, and he would hold that average regardless of what kind of female he might be mated with.

The sons of such a male would be certain to inherit the same trait to a great degree, and the progeny of those sons would also be largely males, and we would soon find the family on the very verge of extinction from the lack of females. Such a family has not been found in a long and careful search of the records of pedigreed registered cattle, in our three leading breeds of dairy animals. From the facts we have presented in this and preceding chapters, we believe we are safe in the conclusion that the sire does not influence, in any way, the sex of his own progeny, for never yet has a sire failed to get some female progeny from some of the females in the flock or herd if he were given any considerable number of females. We have cited, in previous chapter, how the same cock produced all females with one hen and all males with another.

It seems to be the duty of the male sperm cell to fertilize the egg cell produced by the ovary, the egg cell is many times larger than the sperm cell is and when fertilized it seems to go right on with its business of growing and developing. It is the principal business of the sire to transmit the characters of his forebears to his progeny, and when we ask him to carry the sex determinants we are asking for something a trifle out of his line. He may be, and often is, a domineering sort,—fully realizing that he is one-half the earth and so demanding the best of everything for himself—but the fact is he lays no eggs, he brings forth no living young, he never gives a gallon of milk or makes a pound of butter, and he cannot control the sex of his own offspring. A good sire is a good transmitter, and if he is good at that and has the right kind of ancestry, that is all we need ask of him. Nature did not plan him for the creative part of the work of reproduction.

Consider that the female egg cell is the one that carries the sex determinant, and that they are secured in the ovaries, sometimes being pretty largely of one sex, and we have this condition, the majority of young from such animal or bird will be the predominating sex, thus if the sex determinants are mostly females then the progeny will be mostly females.

The normal cow has an expectancy of life of about fifteen years, and, if not paired, will produce an egg cell about every 21 days or about 255 times during her life, now if her egg cells carry nine female sex determinants for every one male sex determinant, that would make it possible for her to produce any one of 230 females and 25 males, so if the males should all come first she would not live long enough to produce a single female calf, but in considering any reasonably large number of cows we would probably find that their calves had averaged pretty close to the exact point of division of the sex determinants of the egg cells.

Applying the same principle to a hen we find that she may produce at any time, any one of a thousand or more eggs, and eggs in this case means chicks, and while it is possible for any one individual to greatly mislead the observer, yet in practice we will find that the progeny that are readily observable will usually give us a very accurate idea of the actual proportions of the different sexes present in the egg cells of the individual.

With closely pedigreed live stock we can readily divide all females into three classes, bearing in mind the possible chances for the production of a "sport" at any time. Those with close inbreeding, that will assure us of sufficient power to transmit the trait, and a well defined proportion of females, this should include all those groups of close relatives that show 90% or higher of female progeny. Next we have the group with the inbreeding, but with the tendency to produce less than 10% females, or 90% males. And then we have left those great groups without the inbreeding that would give them stamina, or having that also show an erratic perform-

The above photos of a Barred Plymouth Rock male and a White Plymouth Rock female are representative of the quality of stock found on the C. C. Shoemaker Poultry Farm, Box 605, Freeport, Ill.

ance, between the two points from 90% females to 90% males.

Now we find another condition that sometimes appears, where one line of blood has been intensely concentrated for a time, then crossed and hopelessly mixed with a number of other lines, so that at first appearance there is no concentration, but a more careful examination of a further extended pedigree will reveal the concentration, and as this line was far stronger than any of the others it still, tho greatly reduced, is able to dominate the character of the individual, and these cases are by no means rare.

An example of this kind served to throw light on the reason so many grade cows had shown great persistency, and an almost unbelievable proportion of female calves, for we had been convinced, that without close breeding there would be slight chance for sex tendencies to be transmitted, yet we found a considerable number of cases where a definite trait amounting to about seven females to every male had been repeatedly shown by a mother and daughter.

The authentic case was a Jersey bull, widely famed for the fact that he stood so close to the Flying Fox family, his sire being a pure Fox, the examination of his seven generation pedigree revealed that he had Flying Fox blood in exactly two-eighths of the document, but on the side of his dam he traced just exactly four-eighths to old Stoke Pogis, while the other two-eighths represented what was called two good out-crosses for the Fox blood.

The owner of that bull, with the pedigree in his hands, wondered why the bull himself, and his calves as well, all looked like the Stoke Pogis family and showed none of the Fox characters. It was a case of four to two and the Fox blood had not been sufficiently concentrated to be stronger than the Stoke Pogis, in any such quantity.

Aside from the fact that all of the ancestors of this bull were Jerseys, he was so completely mixed as to convey the impression that there was no concentration behind him, as the names of his immediate relatives did not betray the strong Stoke Pogis blood behind him, and when the pedigree was extended and this was brought to the surface it revealed the secret.

He was, for our purposes, apparently a cross-bred bull, but when we found his ancestry, then we began to look for

the ancestry of some of the scrub cows we had been considering, and found in every case the same or similar conditions, where there were strong evidences of a preponderance of females having been inherited from parent to progeny, we immediately found that behind it was a strain of strongly concentrated pure blood that was able to defy, as it were, the widely scattered strength, of the other blood lines that had entered into the conglomeration.

Given careful pedigrees and records with which to work, and obviously these records must be complete to be of value, then we can divide all females into our three classes, those that will produce mostly females, those that will produce mostly males, and those that will produce about half of each sex, or if they should run up a high score for either sex, would probably not sustain it in their progeny.

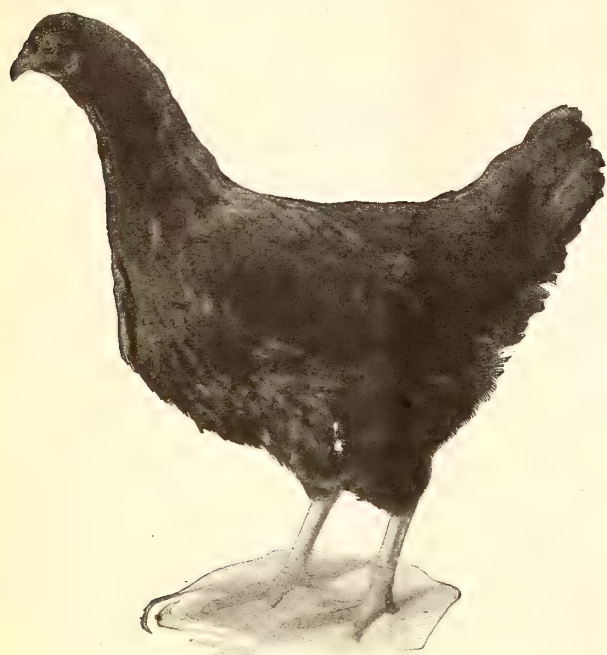

A male whose dam produced 90% females, and whose sire's dam did approximately as well, these two dams being full sisters, or otherwise closely related, and showing several closely related females with quite similar records is certainly a sire that one can depend on to transmit the trait, for his business is solely to transmit the traits of his ancestors.

Certainly a sire with such a group of ancestors will be hard to find in any line or breed of stock, but such individuals can be and will be produced, in the course of time, and a little attention paid to the subject will assist mightily in advancing the time.

Many cattle breeders have noticed that the new-born calf shows in the shape of the head some indications of its sex, and that male calves are usually larger in size than females, and are usually carried from several days to a week or more longer before birth than are females, these differences must be due to some prenatal influence, or they would not be apparent at birth, they cannot be due to the quality or quantity of feed entirely, as two cows on the same feed will produce calves of opposite sexes, each one with the characters that usually go with that sex. They cannot be due to the sire, as two cows bred to the same sire have gone thru life, one of them producing practically all males, while the other produced practically all females: then the only other pre-natal influence that can affect the sex, and the characters that are shown with it, must be present in some form in the ovaries of the

female, and are given to the egg cell before it leaves the ovary.

A certain Guernsey cow came under my observation, that had been paired with a Holstein bull, and produced a grade

BUCKEYE HEN.

Champion Deem's Lady. Owned by Buckeye Poultry Yards, Eaton, O.

calf that was nearly black and white, when bred again to a registered Guernsey bull her next calf showed much of the Holstein Black. I saw this calf, and positively know that it's sire was the Guernsey.

Prof. Geo. Coote, who was for several years under the great Chas. Darwin, related some similar result produced by that great naturalist in experimenting with Collie dogs, and a hen in our own yards, with a natural slate colored leg, was paired with a White Leghorn male, and her chicks afterward showed much yellow in the legs and skin.

From these things and watching the course of the phenomena for a considerable time I formed the opinion, which may not be correct, but seems to have been fairly well supported, that the color pigment, from the sperm cells of the male has stained the sensitive walls of the uterus, and the stain is thence transferred to the subsequent progeny. If this theory is correct there will be small danger of corrupting the sex of subsequent generations by the accidental mating in of a foreign male, while this would undoubtedly corrupt the sex producing tendency of result of that mating it should not exert any influence over the tendencies of the future offspring of the same female, provided she be mated again to a male of her own family.

Color pigment might easily stain whatever it should come in contact with, but it could not come in contact with the ovaries, and as the ovaries alone influence the sex of the progeny, the sex tendency could not well become corrupted from a foreign mating, hence so long as the female is mated to a male of her own family, we are reasonably sure to transmit the tendency even tho she may have been previously mated out of line. This at least would seem to be the logical expectation, tho I am not at all certain the color pigment stains are produced in that way, and if they are produced in some other manner, then it might be possible to transfer as well the stain of the male from a family producing progeny of the opposite sex.

The cautious breeder, of course, will desire to stay away from all foreign stains, for the sake of colors if for no other reasons, and if at all interested in the control of the sexes he will as certainly avoid the touch of a foreign sex tendency as he would avoid an epidemic or plague.

If the ovaries of a hen produce say 30 eggs and give ten of them the short round shape, and incidentally the female sex for the chick therein, while ten of them are long and

rather well pointed, and also contain that which causes them to produce male chicks, and the other ten are so poorly shaped that we cannot accurately place them as to their shapes, and after incubation we find that these have produced about as many male as female chicks, may we not expect that her daughter's ovaries will be somewhat like hers, and hence produce progeny in about the same proportions?

If we find that of 30 eggs from one hen 28 are very even in their short round shape, while the other two are unusually long and well pointed, and on incubation the chicks are found to be about all females, then if we go further and mark the long eggs, and examine the chicks to discover that these are both males, can we not reasonably expect the ovary of the daughter of such a hen to give a performance quite similar?

When we remember that the ovaries are the most highly specialized organs in the body, and are the most important to the individual and the race, for without them and their functions the individual and the race could not be reproduced, then we appreciate to some extent the fact that these organs must be very largely governed by the laws of heredity, and in developing a new individual they must follow very closely after the lines of development, thru which that form has passed in the scale of evolution.

The ovaries then of a female whose ancestors on both sides have regularly produced more females than males may well be expected to continue in the way their predecessors have gone. And if the ancestors on one side have been doing one thing while the ancestors on the other side have been doing another, we may well expect that this individual will do both, or neither, and so long as a female cannot produce 90% males thru her life and also produce 90% females thru her life, she is reasonably sure to do neither, and in the case of the mule she does nothing at all, the difference between the characters of her dam and her sire's dam were too great.

If these things be true in fowls, they must be true in cattle, swine, horses and dogs, and if true in any one, then in all the others.

The individual we seek may be rare, but the more rarity the greater the value, so the search cannot be in vain, and the cost cannot be too great, so long as the value will be greater than any cost.

White Plymouth Rocks formed a very strong class at the Palace Show, December, 1915. The bird above won first in pen for Mr. Lewes Doerhoefer, of Anchorage, Ky.

The White Orpington—A Leading Variety

It Has Enjoyed a Phenomenal Growth, and, Like the Acorn, Has Grown to Be a Mighty Oak in the Forest of Poultrydom. First Prize Article, The Aldrich Poultry Farm's Orpington Contest. *By John A. Carruthers, Colorado Springs, Colorado*

LESS THAN FOURTEEN years ago at the great Chicago poultry show, there appeared for the first time in America a pen of ten white fowls bearing the legend "White Orpingtons, Imported from Orpington, England." At the last Chicago show, this variety occupied a class of about one hundred and seventy-five. You may go into any show in this country today, and you will find the White Orpington among the most popular and most numerous of all the poultry classes. It has enjoyed a phenomenal growth, and,

like the acorn, has grown to be a mighty oak in the forest of poultrydom.

The White Orpington is of English origin, and, if the statements of some of the earlier breeders are to be taken as true, it was produced by crossing White Leghorn males to Black Hamburg pullets and mating the resulting pullets that were white to White Dorking males. It will be seen at a glance that the progenitors of this variety were of very high utility standing in their respective fields, the Leghorn and Hamburg in the production of eggs and the Dorking in the production of meat.

The early Orpington was, of course, not the bird of near perfection which we see today. There was blue in the leg to be dealt with, the white in the ear lobe, the misshapen comb and a color that was often far from that of the "driven snow." But owing to its innate worth—its irrepressible qualities—it found many friends on this side of the water. It was soon admitted to the American Standard of Perfection, and, as time went on, the American idea was crystallized, and a bird was fashioned that would be more beautiful to look upon and yet carry more flesh and lay more eggs. The blue of the Hamburg was eliminated from the leg, the white from the Leghorn ear lobe was dispensed with, and stubs on the shanks, caused by a further cross with the White Cochins to get type and size, was bred out. Color was not forgotten, and now the average breeder may advertise "Snow Ball" White Orpingtons without fear of federal interference. Today the Orpington is as near perfection as any breed that has been exhibited for a quarter of a century or more.

In the show room it stands without a peer. Set upon a pair of short, stout legs placed well apart, with a deep, nicely rounded breast, a broad, long back curving gradually to a well spread tail, bright red eyes, ear lobes and neat, five-point comb contrasting against a background of snow white plumage; no more striking bird can be imagined. The great size, the sturdy frame, the bright fierce eye and the alert poise, typifies vigor and strength, and who can pass it without stopping to pay homage to nature's best creation, the White Orpington.

It attracts at once the eye of the novice as well as the fancier. The novice has no time nor room for double mating—he usually is limited to a small space and he wants results—he finds it difficult enough to breed out the perfection of type, eye and comb without studying the intricate questions of barring and lacing of feathers. Here he has only the one mating to contend with, and only the one ideal of color—pure white—to work for. This last object is attained by careful culling, selecting and breeding only from the whitest birds and not by the method used to perfect parti-colored fowl.

For the small home fancier, there can hardly be imagined a more attractive bird. By nature docile, it readily adapts itself to its surroundings. It does well in confinement and may be kept in a low enclosure, yet when allowed free range will forage as far and as actively as the lighter breeds. The small breeder often finds it difficult and sometimes impossible to operate an incubator and brooder; the Orpington man needs

none, since as a setter the Orpington is unexcelled, and is faithful and careful as a mother. The present day White Orpington, however, will seldom try to set more than once a year, and pullets frequently go thru their first laying year without such a desire.

The large fancier finds plenty of competition, and he finds a ready market for his best birds, at a figure far above that of any other fowl. The record price paid for fowls both in singles and pens is held by this variety and it is nothing out of the ordinary to see single birds selling today for \$200 and \$300 each, and up. The fancier who can produce the winners at the shows, large and small, can sell, at a good price, all the eggs he is able to produce. There is a constant and ever increasing demand for the really good White Orpington.

It does not stand on its popularity as an exhibition fowl alone. It is the largest of the clear-shanked birds today.

Chicks often weigh two pounds and better at eight weeks, are good roasters of eight pounds at six months and attain a weight often of from twelve to fourteen pounds at full maturity, when their flesh is equal to that of the finest turkey. Their white, dry skin dresses far more attractively than the yellow oily skin of other fowls, and I have never heard a criticism offered by any one after giving them a fair trial.

As an egg producer the Orpington is on a par with the very best so-called egg breeds—there is certainly no variety that will produce eggs worth more money during the whole year. It is, primarily, a winter layer. Being blessed with a body of considerable flesh, and a covering of thick feathers, it can withstand the rigor of the most severe winter. Other breeds are trying to keep warm at this time, eggs are scarce and consequently higher in price, and the White Orpington is left to supply the demand for fresh eggs.

It is no uncommon thing to find two hundred egg White Orpington hens—no uncommon thing to find flocks of thirty and forty averaging nearly two hundred eggs per hen for the year, and here and there will be found the exceptional bird, which goes better than two hundred and fifty eggs. In a recent laying contest at Mountain Grove, Missouri, a White Orpington pullet laid 232 eggs in twelve months; another laid 200 eggs in ten months, led all birds in the contest to date, and died. The Australian Laying Contest, where the highest records of all breeds have been made, have produced a pen average of 252 eggs per hen in a period of twelve months.

The Single Comb White Orpington has more true fanciers breeding it today, more men who have a true ideal in view and who have the good of the variety at heart, than any other variety. These breeders are looking not only to its perfection as an exhibition fowl, but to the greater production of eggs and to good flesh development.

This is why the White Orpington occupies the center of the stage in the poultry drama of today, why it has grown from obscurity to popularity in the short space of thirteen years—the growth has been steady, healthy and sure,—and every White Orpington breeder may look forward with confidence to another decade, and feel sure that his favorite will still be playing the leading role in poultrydom.

The Reason I Raise White Orpingtons

They Are Clean and Attractive, Lay as if it Were Their Sole Ambition. They Are Without a Rival as a Table Fowl, Unexcelled as Mothers and Grow Rapidly to Maturity.—Second Prize Article in The Aldrich Poultry Farm's Orpington Contest.

By JAMES EMMET ROYCE, Spokane, Wash.

THE REASON I RAISE White Orpingtons is that my neighbors do not. The reason I know the White Orpington is the best bird for my purpose is that those neighbors breed other varieties of fowl.

If I had not that ever-ready basis of comparison I might not be half so well satisfied with my own little snowy flock. As it is, I need only to lean over the fence, in almost any direction, to know I would not trade with any of them.

Let me put down plainly just what the situation is:

I am not a poultry "fancier." I am not a breeder of blooded stock for the purpose of supplying others. I haven't a blue ribbon to my name. I do not own a poultry ranch of many acres, with thousands of birds ranging at will over grassy meadow and thru blossoming orchard. My total number of fowls has never been over the hundred mark.

I am just one of the ordinary fellows, who makes a living at something else and keeps chickens for the love of it—just one of the thousands who make up the great bulk of the poultry enthusiasts of our country.

I keep chickens as some men play golf—because it takes me out in the open air during the little leisure time I have; because a man to get the most out of life *must do something*. But my poultry flock is not a fad. It has to pay its way. It has to furnish strong proof of its value every day, and month and year.

When I decided I had wasted time enough on a calico-colored crowd of scrub fowls and set out to take the proposition seriously, I had some very positive ideas about the kind of a bird I wanted for steady company.

First, I wanted white fowls, because they *look* clean only if they *keep* clean, and cleanliness is as much a hobby with me in the chicken coop as in the dwelling house. A red chicken, or a gray, or a black one, can be as filthy as it pleases—and get away with it. A white one carries its character on the outside. Besides, I like the snowy looks of white plumaged birds scattered over the runway. Little or big there is nothing prettier.

Second, I wanted a bird that would lay eggs—sizable eggs

and plenty of them. Some of the egg breeds have done this in the laying season, but all the coddling in the world will not make them really enthusiastic about it when the snow is on the ground. My egg cards show a one hundred and fifty egg average the year round.

Third, there is nothing I like to eat more than I do chicken; and when I sit down to a meal of it I want *chicken*—not sparrow. I sought a bird which would dress for the table like a turkey, which would be as succulent when stewed as a two-year-old as it would be broiled in its babyhood. Come over to the house for dinner some Sunday, and see if Orpington does not fill the bill.

Fourth, I wanted a bird which would hatch its own young. I do not like incubators. I want the chickens brought out of the shell in the good old way. Now watch my flock. They go broody in January, February, March—without waiting until the time for early chicks to be over before taking the notion. If I have eggs to be hatched, they stick to the nest like glue, bringing out one brood or two, or even three in succession if asked. If I do not need their services they are easily broken up. I may say, however, that I have to break up very few of them. My neighbors are always calling for the services of any I can spare.

What more could the home poultryman ask? White Orpingtons are clean and pretty. They lay as if it were their sole ambition. They are without a rival as a table fowl. They are unexcelled mothers and their young grow rapidly to maturity. And I am a hard taskmaster I guess. I hold them to account for every penny spent upon them—and demand adequate return for it.

My books show a profit of better than a dollar a year per bird. If they'll do that in a flock of a hundred, there is no good reason why a man with a thousand cannot succeed with them as well.

Four years ago not enough poultry and eggs were produced in Pontotoc county, Oklahoma, to supply the local demand, many farmers failing to raise enough poultry to supply their own tables. Today there are several poultry and egg shipping houses in Ada and their monthly shipments amount to more than \$4,000, or over \$50,000 a year. For three months last fall \$3,000 worth of turkeys alone were shipped monthly from that city.

HOMESTEAD CAMPINE FARM WAYLAND, MASS.

Net Cost of Producing a Dozen Eggs

First Prize Article. Showing Cost of Producing Eggs with a Selected Flock Compared with Average Flock "Just As They Grew Up." By A. C. Drury, Piedmont, N. H.

HAVE BEEN INTERESTED in poultry for over fifty years and have always kept a general account of expenses and sales. Like most "hen cranks" I have tried many breeds, from Bantams to Cochins. In 1913 I decided to try, for the first time, Rhode Island Reds. I had at the time, White Plymouth Rocks and White Leghorns.

As I wished to find one breed that would meet my conditions—climate, market, etc.—I decided to establish a cost system to satisfy myself in regard to several matters. First, profitability of the breed,—as that is my living. Second, hardiness and vigor, for this is a cold country. Third, evenness of production. I had no idea at that time that anyone would ever see the results of my investigations, and I do not now propose to make public the conclusions concerning these breeds as far as I have gone.

Early in 1914 I decided to make a two-year test of the same three breeds and to note several other matters that had been brought to my attention, one in particular in regard to the cost of eggs from *selected pullets* as compared with a *flock just as they grew up*. Unfortunately sickness prevented me from keeping complete records for the full time, so I have only seventeen months' records of the several matters that interested me deeply.

When I saw the announcement of the contest in the MARCH AMERICAN POULTRY JOURNAL, the thought came to me that I could give the cost records without including the other matters. If I do not win a prize, I feel that they may prove of interest even if only to compare with records of other places and under different conditions. I am sending the record of one pen of unselected pullets—a flock just as they grew up—for seventeen months. The one year record is for three pens of *selected pullets*. My cost for the whole plant, 600 to 800 fowls, per dozen eggs is 26.19 cents net.

CONDITIONS under which the records were obtained:

Climate.—Very cold winters; March 12, 1916, 7 A. M., 22 degrees below zero and at 2 P. M., 38 degrees above zero—very trying to fowls as well as poultry.

Houses and Care.—Long houses with pens 12x18 ft. and some 12x20 ft. Same general care given to test flocks as to other fowls, excepting in matter of records, weighing feeds, etc.

Feeding.—Same as the rest of the 600 head. A dry mash constantly before them, also grit, shells, charcoal. Fresh water three times a day. Mixed grains, wheat, barley and cracked corn. Fed sometimes as a mixture and sometimes separately. The dry mash varied according to condition of flock, the weather, and the production.

Price of Feeds.—Variable, but quotations at present writing are:

Feed.	Price per 100 lbs.
Corn	\$1.70
Cornmeal	1.70
Middlings	1.50
Wheat bran	1.45
Gluten	1.70
Linseed meal	2.00
Cottonseed meal	2.00
Wheat	2.30
Barley	2.00
Charcoal	2.00
Ground bone	3.50
Meat scraps	2.75
Fish scraps	2.65
Alfalfa	1.55
Oats, per 2½ bushels.....	1.50
Zenoleum disinfectant, per gallon.....	1.50

Fixed charges include:

Labor at 20 cents per hour, a very careful account shows

actual cost of time spent and cost per pen regardless of number of fowls, whether 30 or 70 birds, to be \$2.30 per month.

Therefore labor	\$2.30 per month
Interest, at 6% on \$100 per pen.....	.50 per month
Taxes, at \$20 on a \$1,000.....	.17 per month
Depreciation of buildings, etc.....	.37 per month

Total, per pen.....\$3.34 per month

Food and Supplies include: All supplies and food purchased and used, the various items vary from month to month. Waste from garden and clippings from lawn used for fowls is *not* included in food cost. Shavings for nests cost two cents per three bushel bag. Supplies do *not* include straw for litter, as a farmer cleans the pens and furnishes straw for same at no expense to me. This fact helps out a little on the labor item, but if I had more land it might be better to buy the straw for cash.

Loss by death is figured at inventory price of 75 cents each.

Salable eggs received means just that, as I never count soft shells, small, or double yolked eggs; in fact, nothing that is not salable is counted. We get only about enough of such unsalable eggs for use in house.

I plan to get the pullets into winter quarters from September 15th to October 1st, according to weather and condition of pullets. I use *no yards* for laying stock; they stay in pens till sold for market. Open-front houses, with cloth curtains for stormy or very cold weather. Pens are kept reasonably clean and are disinfected with one of the coal tar products as often as needed. When the mercury is 30 to 40 degrees below zero I don't use disinfectants.

Number of fowls means the number of birds in pen on the first day of given month.

Selling cost includes:

Cartage to depot on two cases—60 dozen.....	\$.20
Express to Boston and the return of empty cases, and revenue stamps93
Cartage of empty cases to hennery.....	.10
Packing, fillers, wear and tear, breakage, etc.....	.27

Or estimated average selling cost at 2½ cts. per dozen...\$1.50

This estimate is liberal, as I sell a good many eggs for shipment less distance, and many at the door to local buyers who furnish their own cases and pack eggs at no expense to me.

I wish to say that the average net cost per dozen given in the yearly record for selected pullets is about 6 cents less per dozen than cost shown in the records for the total number of fowls kept. The number of fowls kept varies from year to year and this year I have only about 600. The reason for this difference in cost price is that the number of eggs per hen in the selected pens was about 20 more eggs each than I am able to get from the others. I am fully satisfied that the production cost is governed largely by the number of eggs produced, as well as by reducing labor cost. I have given up trying to reduce cost of production by reducing quality or quantity of feed. I have lessened the cost of watering and feeding by putting water pans and mash hoppers *between pens* so that one pan and one hopper care for two pens. It is a small item of itself, but it counts when you have 1000 or more baby chicks and from 600 to 800 fowls to care for. I find I can care for 600 fowls in my long laying house in less time, and with less effort, than it takes to care for 200 in four colony houses of 50 birds each. I keep finding new points in labor saving and I believe that each poultry keeper must study his own conditions. Save a step here and there, carry two pails of feed or water in place of one.

I don't think I have production cost reduced to the lowest point yet, but I know I have made some gains since I began to keep a detailed account. While it means a lot of care and work, I feel more than repaid by the knowledge gained in regard to matters that interest me. I have not said anything

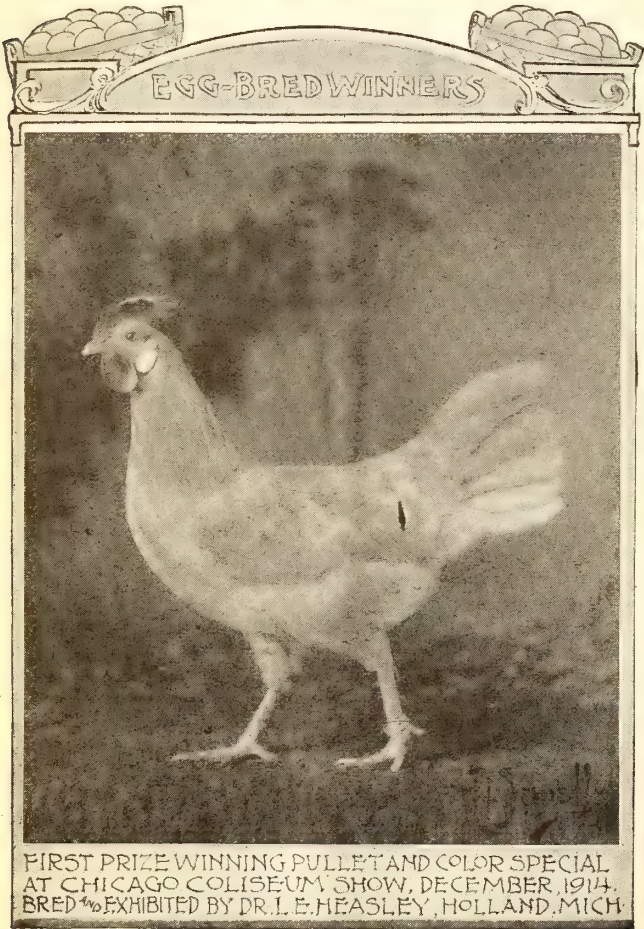

about selling price of eggs, as I do not understand that that has anything to do with cost of production. But will say that it has been more than the average cost in all my experience, but sometimes has been very close. In monthly cost record the selling price has been below production cost of eggs for about four months of the year and above for eight months, so taking the year as a whole the per cent profit has been fairly good. I urge every poultry keeper to keep a carefully itemized cost account.

TABLE OF EGG COST WITH CAREFULLY SELECTED PULLETS.

Pen 3, June 1, 1915, had 52 White Plymouth Rocks.
Pen 4, June 1, 1915, had 57 White Leghorns.
Pen 5, June 1, 1915, had 55 Rhode Island Reds.
Total selected pullets on June 1, 1915, 164.
These pullets were penned September 15, 1914, and are still in pens.

Month 1915	No. fowls 1st of month	No. broodies	Overhead fixed charges	Food and supplies of all kinds	Loss by deaths	Cost of production	Salable eggs produced	Selling cost per dozen	Net cost of eggs per doz.
January	164	4	\$10.02	\$19.77	\$2.25	\$32.04	1474	.025	\$.29
February	161	8	10.02	20.25	30.27	1569	.025	.26

Average net cost of eggs per dozen for seventeen months, including selling cost, 27+ cents.
Average number of eggs per hen for seventeen months, 152.
These birds were not selected for quality, but were penned "just as they grew," without culling.

Net Cost of Producing a Dozen Eggs

Second Prize Article. Record 65 S. C. White Leghorns for One Year Shows Average Cost of Approximately 26 Cents per Dozen Eggs.
By A. J. MYERS, Blue Island, Ills.

THE COST OF A DOZEN EGGS is a subject of such vital importance to poultry keepers that it is naturally welcomed by the poultry press and the discussion will bring about a desired result, that of showing thousands of people that they have been selling eggs below production cost. It will do more real good to the poultry industry than has been done by any other means for many years.

In the following accounts, giving actual figures of costs and receipts in my yards, the figures and results are not claimed to be a standard, because no two people will get the same results. The data will, however, I believe, prove of interest to every poultry keeper who is searching for facts and wants worth while results in his poultry work.

The record is for 65 pure bred S. C. White Leghorn pullets, May hatched and always kept in confinement. The pullets were housed in a monitor-top open-front house, allowing three and three-fourths square feet floor space per pullet. The house was kept in sanitary condition and the birds free from lice. Mash, oyster shells, charcoal, beef scrap and grit were kept in hoppers always accessible. Grain was fed in straw litter. Fresh water before the birds at all times.

Grain and supplies, cost per pullet, per year:

Wheat, 27½ lbs. at 1¾c.....	\$.48
Oats, 17 lbs. at 1⅓c.....	.25
Corn, 27½ lbs. at 1⅓c.....	.36
Dry Mash, 36 lbs. at 1½c.....	.54
(Mash is 60% bran, 40% corn meal)	
Beef scraps, 7¼ lbs. at 3¼c.....	.25
Oyster shell, 8 lbs. at 1c.....	.08
Charcoal, 2 lbs. at 4c.....	.08
Grit06
Straw for litter.....	.13
Salt, pepper, mustard, epsom salts, etc..	.04
Total.....	\$2.27

Investment:

House, per pullet.....	\$1.00
Equipment50
Cost of pullet.....	1.00
	<u>\$2.50</u>

Interest on investment at 6%.....	\$.15
Labor and care per pullet for year.....	.27
Avg. loss per pullet on flock mortality.....	.05
Depreciation15
Rent, water, lime, disinfectants, coal oil, sprays, etc.12

Total fixed charges per pullet..... \$.74

Total costs per pullet per year..... \$3.01

Average number of eggs per pullet per year.....140½

Average net cost of producing one dozen eggs.....26 cents

No charge is made for advertising, cartons, stationery, postage, cartage, express, etc., as all eggs are sold at door. Care has been taken in keeping accounts and figures furnished are accurate. While amount of grain, mash, etc., is above what is said to be the correct amount, the results were satisfactory, as the eggs were above average in weight per dozen and were good food value.

Following is a summary for one year showing month returns, total food cost and food cost per dozen eggs:

RECORD OF 65 S. C. WHITE LEGHORN PULLETS.

**Prices Received for Eggs and Food Cost Per Dozen.*

Month	Per cent laying	Dozens laid	Average price per doz.	Weight per doz. ounces	Food cost only per doz.
October	5	7-4	\$.42	24	\$1.71
November	20	32-4	.45	24½	.41
December	31	50-4	.42	26	.26
January	41	66-7	.40	28	.23
February	46	74-9	.38	27½	.19
March	52	84-6	.32	27½	.16
April	60	97-6	.28	27½	.13
May	71	115-4	.25	27	.10
June	54	91	.28	27	.11
July	45	73-1	.30	26½	.14
August	20	32-1	.32	25	.30
September	12	19-6	.35	24¾	.47

Total eggs laid, 744 doz. 4 eggs.

Total amount received for eggs, \$246.53.

Average price received per dozen eggs, 33.12 cents.

One of the females from the breeding pens of W. W. Carpenter, East Providence, R. I., Barred Rock Specialist.

**Table of Net Cost of Producing One Dozen Eggs.*

Month	Fixed charges	Food and supplies	Total cost	Eggs laid	Net cost per doz.
October	\$ 4.008	\$ 12.54	\$ 16.548	88	\$2.21
November	4.008	13.28	17.288	388	.53
December	4.008	14.76	18.768	604	.37
January	4.008	15.49	19.498	799	.29
February	4.008	14.02	18.028	897	.24
March	4.008	13.65	17.658	1014	.21
April	4.008	12.54	16.548	1170	.17
May	4.008	11.80	15.808	1384	.14
June	4.008	10.33	14.338	1092	.16
July	4.008	10.33	14.338	877	.20
August	4.008	9.59	13.598	385	.42
September	4.008	9.22	13.228	234	.67
Totals	\$48.10	\$147.55	\$195.65	8932	

Annual fixed charges per fowl, 74c; food and supplies, \$2.27; total, \$3.01.

Average production cost of eggs per dozen, 26 cents net.

Overhead or fixed charges in this table contain estimated percentage for mortality or loss by death. Food and supplies allow for straw for litter, see tables of supplies and fixed charges.

(*Author's figures have been arranged in two tables for convenience and for comparison with the first prize article.—Editor.)

Prof. A. G. Lunn, for some time an instructor in the poultry department of the Oregon Agricultural College at Corvallis, Ore., has gone to the Massachusetts Agricultural College as extension instructor of poultry husbandry. He has been succeeded at the Oregon Agricultural College by Prof. A. C. McCulloch, a graduate of and for some time an instructor in the poultry department of the Canadian Agricultural College at Ontario, Canada.

"The State School Poultry Association" is the name of a new organization launched in Oklahoma City, Okla., in October, agricultural teachers from the several normal and preparatory schools of the state attending the meeting. The object of the organization will be the promotion of interest in poultry raising among the rural school pupils thruout the state.

Altho the Canadian hen has made a record as an egg producer to the extent of 123,000,000 dozens of eggs during the last fiscal year, it is a remarkable fact that Canada still has to import more poultry and eggs than she exports.

First prize Silver Campine cockerel, Chicago Coliseum Show, 1913; headed first old pen at Coliseum, 1915. Owned by Frank E. Hering, South Bend, Ind.

AMERICAN POULTRY JOURNAL is the oldest poultry paper in America. It has a national and world-wide reputation. The best writers on poultry matters contribute to its columns. It receives the patronage and endorsement of the foremost representative breeders of standard poultry and manufacturers of poultry appliances in the country.

ALTHO THERE HAS been considerable opposition to the proposed elaborate and expensive separate breed standards to be published by the American Poultry Association, the committee — or rather the chairman and his employees — seem to be pushing the work as rapidly as possible, with the evident purpose of putting up to the next annual meeting the alternative of accepting the manuscript and illustrations as prepared or throwing away a very considerable expenditure of the funds appropriated.

A large sum was appropriated at San Francisco for this work and practically placed at the demand of the chairman, who, so it would seem, is losing no time. In the copy of a letter, apparently written by him to the chief executive of the Association appears the proposition to practically eliminate the other members of the committee and to put the work of "getting together the copy" for these books in charge of "Homer W. Jackson, a man in the employ of Cyphers Incubator Co.," which letter proposes to start the work about April 10th or 17th, and contains the following eloquent paragraph:

"Of course there is no time to lose! We have quite a big job ahead of us and it will be necessary to get together as soon as we can, in order to lay out the work further and then put two or three good men 'at it' in dead earnest. Please favor me with an early reply. Should judge it will require about \$125 to \$130 per week to carry on this work, including four days per week of Mr. Schilling's time, three days per week of Mr. Sewell's time, about four days per week of Mr. Jackson's time, to which must be added the services of a competent stenographer at

about \$12.00 per week. Shall be glad to furnish office room at all points, but the cost of art materials will be charged to the Association at cost. Shall also expect the Association to compensate these men regularly on presentation of bills duly O. K'd by the chairman of the committee, subject to the approval of the usual authorities."

It will be noted that the persons herein proposed to be put on this work and the pay-roll of the Association during the present dull season prior to the convention, are all persons who are regularly in the employ of the chairman and drawing salaries from one or more of his business concerns. That there are other equally competent men—and, in one case at least, men more experienced and capable of taking charge of such book making—in the Association and available for such work should be apparent to anyone.

We understand that a meeting of the Standard committee was held in Buffalo the latter part of April. Evidently it was not possible, or considered necessary, for Mr. Russell to come on from the Pacific Coast. We understand that Arthur C. Smith was present, "on account of preparatory work he has done in connection with the Plymouth Rock breed standard." Messrs. Sewell, Schilling and Jackson were also counted present. Mr. Essex, we believe, was there to report on the Market Standard, and we were informed that Secretary Campbell was present to represent Pres. Richards, who was too ill to attend. Just why Vice-Pres. Peters was eliminated and did not represent the president, as is customary in such cases, we did not learn, and at present writing have received no reply to our inquiry.

Presumably the work is to be pushed as rapidly as possible by the chairman and his regular em-

ployees, altho, in view of the fact that both gentlemen have gathered together much valuable "copy," it is probable that Messrs. Smith and Drevenstedt will be called upon to furnish a certain amount of "copy" and data for two of the books. As the Association would have difficulty to find two more experienced and better equipped men to prepare the books than Arthur C. Smith on Plymouth Rocks and J. H. Drevenstedt on Wyandottes, it seems a pity, if this book making must be done, that these men were not selected to prepare all manuscript for these books and have a place on the "pay-roll." Of this we shall probably learn more later when the reports are all in.

In the face of so much opposition to these proposed elaborate and high cost breed books, it seems unwise for the work to be so rushed and the appropriation used up just at this time. It would apparently have been wiser to have held up the work until the Cleveland convention had an opportunity to consider it; as the vote at San Francisco does not seem to have been representative of the whole Association.

It is never wise to build extensively and expensively on shifting sand. Such foundations are liable to destroy the whole structure. The present "main" Standard has been severely criticised and appears to be highly unsatisfactory to breeders and judges alike. To build a whole series of elaborate and high cost breed books on the shifting sands of such a foundation, and at a time when the publishing business is in a more difficult and costly position than for many years and when book sales are slow and uncertain, looks like a most unwise proceeding. While the "main" Standard will, in all probability, be only an imperfect mirror reflecting the fickle fashion in exhibition fancy, it should be the effort of the committee to first correct and perfect this much criticised "set of copied rules—copied from Nature's winning specimens by this human family of which we are all members and whose knowledge, we must be frank to confess, is still in a fledgling condition"—as Judge Platt states it—before attempting to build on the Standard foundation a series of high cost breed books.

It is practically admitted—and we have not seen the assertion contradicted—that the chief, if not the sole purpose of these new breed books is to provide the Association with additional revenue, because it needs the money. Who gets the money and how are poultry interests benefitted? If it were true that the Association is going into this wholesale publishing business for the better promotion of "every poultry interest" would there be such a rush to prepare expensive books to sell at "fat profits" and books that must soon change with the fashion of the "main" Standard?

If the Association really has, in this movement, the desire to be helpful and useful to its members and to beginners in poultry breeding, would it not endeavor to co-operate with the leading specialty breed organizations for the purpose of publishing practical but inexpensive separate breed standards to be broadcasted free of charge, or at most to be given a wide sale at a price not exceeding actual cost and postage? Very excellent practical and useful breed standards could be prepared and distributed at a cost not to exceed 25 cents each and we believe that such work might be done "for the

good of the cause" without drawing on the treasury of the Association for a summer salary list of close to \$600 a month.

There has been much criticism of the proposed attempt to "standardize" mating and breeding in the forthcoming books and it is asserted that the breeder-novice will find the information in such books to be "confusion worse confounded." Of course it is possible that such information may be used to exploit or otherwise advertise some few successful breeders' methods, but such matter would appear out of place in a "recognized" standard breed book, tho well enough in breed books of another type. Just how practical information of value is to be made helpful and useful to novices on such matters as mating and breeding, without leading the beginner too far afield in these books, will probably prove a vexed question. As a rule each separate mating presents an individual problem for the experienced breeder and he must know what is "back of" his birds as well as what he sees. We have seen a dozen different and some extreme matings of one variety in the yards of a skilled specialist, and each mating was a problem in itself that would require an article of some length to describe. We shall watch the development of this "mating and breeding" feature with some interest and we hope that the Association does not get "another gold brick." On this subject Editor Schwab in *Everybody's* says:

"They evidently now wish to also standardize the mating and breeding question, questions that will always remain questions and over which they have absolutely no control.

"We believe this is a mistake, for the simple reason that the new breeders and the beginners will take for granted, to be official and infallible all that the American Poultry Association publishes. * * *

"The American Poultry Association has its capable members who could readily write articles of 'Advice' on mating and breeding that would be valuable to beginners and of interest to all breeders alike, but to standardize them and sell them as such would be folly of the worst sort.

"The Standard as we have it today, is applied in the show rooms and by thousands of breeders, by each judge and breeder, as they understand it, it has been shown so many times how opinions in judging alone differ. There are miles of space in this difference of opinion between prominent breeders and judges. * * * You can make and adopt a standard for judging, but you never can make a standard for mating and breeding that will give the same results in two states; you can advise and suggest, with reason, but the breeder who does know and those that wish to know, and have the qualities, will succeed by study, trying and experimenting with or without the proposed breed standards."

As we have already said, we believe, viewing the matter chiefly from the interest of pure breeds and the promotion of breeding standardized poultry, that the proper place to make separate breed standards is in the specialty club or breed organization, either with or without the co-operation of the American Poultry Association. Such separate breed standards should be practical, simply worded, as free as possible from conflicting opinions, and should endeavor to describe the specimens as they are found in the breeding yards, and in the show room, and should set forth the desirability of the breed pre-

sented and its practical as well as exhibition characters. The books should be inexpensive and if possible for free distribution, or at most should not exceed a selling price of 25 cents each postpaid.

"Clean Up" in Advertising.

ADVERTISERS and ad writers everywhere will do well to read and heed the recent decision of the United States Supreme Court in defining what constitutes dishonest advertising thru the mails. It affects advertisers everywhere who employ the mails to reach customers, and advertisers are advised that it will be well to modify their statements and to endeavor to eliminate from their advertising matter the "hot air methods" and "catch phrases" now in such common use.

A press dispatch in *Chicago Tribune*, dated Washington, D. C., April 24, says:

"In defining today more clearly than ever before what constitutes dishonest advertising thru the mails, the Supreme Court held in effect that advertisers, even if they give purchasers value received for their money, are guilty of fraud if by exaggerated advertising propaganda they have lead clients to expect more.

"Officials declare the decision will pave the way to scores of prosecutions and make possible the enforcement of a much more stringent Federal supervision of mail advertising."

"Justice McKenna took the position that it was an offense if the article sold did not serve the purpose represented, no matter what the value might be.

"In discussing what constitutes a criminal offense under the statute governing the use of the mails, Justice McKenna said:

"'Mere "puffing" might not be within its meaning (of this, however, no opinion need be expressed), that is the mere exaggeration of the qualities which the article has; but when a proposed seller goes beyond that, assigns to the article qualities which it does not possess, does not simply magnify in opinion the advantages which it has but invents advantages and falsely asserts their existence, he transcends the limits of "puffing" and engages in false representations and pretenses.

"'When the pretenses, or representations, or promises which execute the deception and fraud are false, they become the scheme or artifice which the statute denounces. Especially is this true in the purchase of small tracts for homes."

This important opinion was given in the reversing the decision of the District

Court of Southern Florida, which had quashed an indictment against a real estate concern charged with unlawful use of the mails. While made in decision of a case against a concern selling ten acre farms, it undoubtedly affects all advertisers who use magazine and newspaper advertising and who do business thru the mails.

A liberal interpretation of this opinion might easily include illustrations from retouched photographs when such are not duly labeled as retouched. Referring to this class of poultry pictures, Editor Essex in *Canadian Poultry Journal* says: We have seen Franklane Sewell's work again and again used to misrepresent birds that were as far from the original as were the abodes of the men who mis-appropriated them distant from the abodes of those who owned the originals."

The subject of "faked illustrations is, however, a very difficult one to handle and one has to take the word of the artist, or persons who have seen the specimen, as to whether or not the picture shows the bird as it is or misrepresents it. We can be satisfied that our own artist's pictures when labeled "unretouched" represent the specimen just as the camera faithfully reproduced them, but when we attempted to label a picture "retouched" where, to us, the illustration showed every evidence of artists' changes in the original, we were immediately flooded with protests, stating emphatically that no retouching had been done. Because of this it was found advisable to label only pictures which we know to be unretouched.

According to the "Proceedings" the much commented upon resolutions "censoring and censoring" advertising were introduced to the San Francisco convention of the American Poultry Association "by Grant M. Curtis on request of E. B. Thompson."

While we believe in and would like to see more truth and less "hot air" in all advertising, and particularly the advertisements in the poultry press, the recommendation and adoption of this resolution appeared to us a bit of ill-advised

legislation. It would have been far better to have first a clean-up from within and to have set the American Poultry Association house in order before posing as "lily white" and attempting to "purify the other fellow." Reform and more moderate statements in advertising would be welcome. But in this case the Association itself for several years past and the promoters of these resolutions have been using the very sort of flamboyant advertising which the vote of the Association condemns and seeks by its committee to censor and censure. It would seem to have been up to the American Poultry Association to first set a good example to the poultry world by doing right itself before attempting to reform others. The reform, however, will have to come and it is the high court and not the American Poultry Association that has taken action that will compel reform in advertising. In effect any advertisement is dishonest and any advertiser is guilty of fraud if the ad misleads the investor to hope for or expect more than he receives. That is a pretty sweeping view of the situation. Most of us, under such interpretation of the law, will find that our advertising must be modified and the "hot air" element eliminated. In fact we can well consider the poet Gay's lines:

"In other men we faults can spy,
And blame the mote that dims their eye:
Each little speck and blemish find,
To our own stronger errors blind."

There is a singular irony in the fact that in reply to our comment concerning certain alleged misleading statements in Association advertising and that of certain "prominent personages" in the organization, we were informed that such portions of the ads criticised were merely "harmless statements," yet similar statements in advertising of less important persons were classed as wrongful and misleading. Just why there should be such artificial discrimination "twixt Tweedle-dum and Tweedle-dee" is difficult for anyone not a duly installed "lily white" to comprehend.

For example, it has been stated as very wrong for certain advertisers to use the catch line "Best in the World" or "The World's Best" and doubtless it is true that such catch lines are not lawful and should not be used; yet such is a very common and very American form of exaggeration. The thing that amused and somewhat disgusted us, and which made the San Francisco vote appear ridiculous, was the fact that at the very time the resolution of censoring and censoring advertising was being put thru the convention, both of the promoters of the resolution were using advertising of similar nature and one of them at least had prepared, or caused to be prepared, and used for a long time similar "hot air" advertising for the Association.

On page 26 of the "1916 Mating and Sales List" of the farm of which one of the promoters of the censoring resolutions is the financial head, we find advertised: "Two Pens of Champion Lay-

RED SUSSEX

chickens for real utility. A few eggs now at \$3.00 per setting.

A splendid crop of young birds now growing, including a few Feb. and Mar. chicks. A pair of pullets hatched Feb. 10th weighed 3 1/4 lbs. on April 21st. It is pretty hard to beat these Red Sussex

Box A, ARCADIA, IND.

ers. We are in position this year to supply you with eggs from the *World's Best Pens* of S. C. White Leghorns," etc., and the other promoter of the resolutions, at the time of their adoption, was circulating an advertisement which stated, "If you want to win and breed winners you must have my Imperial 'Ringlets'—they are the standard by which all other Barred Rocks are judged." Naturally, it appeared to us rather odd that these gentlemen should so vigorously condemn in others this very sort of flamboyant advertising and should feel it necessary to have the American Poultry Association adopt resolutions to censor and censure such advertising.

Probably most of us have, thru being accustomed to seeing it and finding it difficult to eliminate, looked upon such "hot air" catch lines as comparatively "harmless statements," but in view of the recent opinion of the Supreme Court, the matter comes into a very different light and advertisers will do well to considerably modify their methods of advertising and to endeavor to eliminate such "hot air catch lines" and so-called "harmless statements" so that they will not be liable to prosecution under the coming enforcement of the laws governing mail advertising and doing business thru the mails.

Status of Reading Notices.

A SUBSCRIBER sends us a considerable amount of correspondence, with a contemporary publication, in which it appears that he wrote to the editor of the magazine complaining that a certain cut accompanying a "write-up" was a faked picture and claiming that the original photograph was taken at a place widely remote from the place written up. He also stated that the "write-up" was not in any way marked "advertisement."

In the correspondence he sends us is a copy of a letter, presumably written by the acting editor of the magazine to the advertiser written up, in which the editor asks for information concerning the illustration questioned as being "faked" and in this letter states, that the

"write-up" was published by request and "As this extra service was due you on your advertising contract, we prepared the article, eliminating quite a good deal of it and published it," etc.

Looking up this "reading notice," published as a part of "extra service" due on advertising contract, we do not find that either the article or cut are in any way marked "advertisement." Our subscriber points out that such use of "reading notices" as part of service on an advertising contract is contrary to the Postal Laws and Regulations and quotes from them as follows:

"All editorial or other reading matter published in any such newspaper, magazine or periodical for the publication of which money or other valuable consideration is paid, accepted or promised, shall be plainly marked 'advertisement.'"

Following this is a provision for a fine of from \$50 to \$500 if it is proved that the publication accepted any consideration or promise of such for publishing of reading matter which was not duly marked "advertisement."

We have frequently been told by poultry breeders that in order to secure write-ups in certain publications they had to agree to take additional advertising space and on several occasions they have shown us contracts or letters indicating that publication of such reading notices or write-ups was a part of extra service on contract, or in consideration of use of increased advertising space. From above information it will be seen that the use of such reading matter, unless

duly labeled "advertisement" may be proved unlawful in case any "consideration is paid, accepted or promised."

It would appear that in this matter some publishers are trying to skate on rather thin ice.

Egg Cost Article Contest.

THE egg cost article contest, which was announced in March AMERICAN POULTRY JOURNAL was rather disappointing. The number of articles received was small and only two articles complied with the conditions of the contest. Several of the articles, which failed to conform with the rules of the contest, gave interesting data but did not show actual production cost of eggs and in some of them the authors seemed much more concerned in endeavoring to show a profit, on paper, for their flocks than in giving an accurate account of what it cost to produce eggs.

While March and the busy chick season may have been an unfavorable time of year for obtaining articles, which require as much work as cost articles make necessary, we believe that the chief reason that so few good articles were received was because very few poultry keepers keep an accurate record of expenses and receipts, and still fewer at-

of manuscript from enthusiastic Orpington "fans."

Some fifty articles were received and Orpingtons were represented by contributions from California, Missouri, Colorado, Nebraska, Washington, Montana, North Dakota, South Dakota, Kansas, Texas, Wisconsin, Florida, Georgia, North Carolina, New Jersey, Pennsylvania, New York, Massachusetts, New Hampshire, Ohio and Illinois and Canada, from New Foundland to the Pacific coast.

First prize for best article, the 1st Buffalo cockerel, to be delivered July 1st, goes to John A. Carruthers, an attorney, 121 East Pike's Peak Ave., Colorado Springs, Colo.

Second prize for next best article, a \$15 sitting of eggs, goes to James Emmet Royce, W. 2214 Jackson Ave., Spokane, Wash.

Third prize for next best article, a \$10 sitting of eggs, goes to S. D. Brennan, 3140 Irving Ave., Berwyn, Illinois.

The available articles in this contest will be published as space permits. Aldrich Poultry Farm has been notified as to addresses of winners and will forward prizes.

Our Cover.

THE increasing popularity of Silver Campines is due to the fact that they have made good all the claims advanced for them by the breeders. As extraordinary layers of large eggs they cannot be excelled and we believe there are no other breeds of the same weight and size that will produce them in greater numbers than they. On account of Campine males being henfeathered, they

will breed remarkably true to colors and more good marked birds can be produced by single mating them than can from any other two or three color breed. Since the American fanciers have taken hold of them, a greater uniformity in type and color has been produced and the quality of first prize winning specimens nowadays compares very favorably with the advance some of the oldest breeds have made. We take great pleasure in showing on our cover this month a handsome specimen belonging to Mr. F. E. Hering, of South Bend, Ind. This bird was one of the many first prize winners produced by Mr. Hering and shown at Chicago, Milwaukee and other great shows. The picture speaks for itself, there is no alteration in the shape of the bird or the barring.—L. A. S.

DR. WOODS' NOTES AND COMMENT.

JUNE.

It is the month of June,
The month of leaves and roses,
When pleasant sights salute the eyes
And pleasant scents the noses.
—Willis.

Try hatching and rearing a few June chickens this season. Give them comfortable quarters in a shady grove or orchard, keep them free from vermin, take good care of them and watch them make rapid growth and develop unusual excellence. Many winning youngsters have been grown from June hatched chicks.

We like to use flowers of sulphur for dusting fowls and chicks, to keep down lice and to dust in nests to keep out all sorts of insect pests. This year it has been unusually difficult to get a supply and the price is uncommonly high. The sulphur is needed in manufacture of war munitions. Just another argument against war—why waste so much sulphur in man killing, when we need it so much to get rid of the hordes of insect pests that are disputing with mankind, and useful animal life, the possession of this beautiful earth?

This has been the most backward season with us for many years and all planting was late. Apple trees did not begin to show blossom buds until the middle of May and altho we had some warm days, the nights were raw and cold. We are not growing as many chickens as common this season and shall content ourselves with a few hundred and limit them to three varieties. Hawks are unusually troublesome and, because our flocks are so much smaller, the raids by these feathered robbers trouble us a good deal. We keep steel

traps set on top of high birch poles and a shot gun always ready for service, but in this thickly wooded district the clever hawks are exceedingly hard to get and are remarkably bold and wary.

* * *

Altho the roads have been bad all spring, we have never before had so many visitors who come to see poultry houses or just "talk chicken." They come on foot, on bicycles, motor cycles and in automobiles—real ones and "Tin Lizzies"—but, whatever way they come, the real poultry interest seems to be the same and we try to make them welcome. Only, we do wish that they would cut out Sunday visits—we would much prefer to have Sunday to ourselves with just the family and personal friends. Still, we suppose that Sunday is the only day that some of them can come.

* * *

Every little while some cute little editor with an ingrowing grouch, or a bad case of indigestion and irritable liver, hands us a hot shot about AMERICAN POULTRY JOURNAL'S "swamp" or "great mass" of advertising and suggests that we edit the JOURNAL in "a little office on the top floor of a sky-scraper in the city, in a place where a live chicken would be a curiosity." That's a pretty rich joke and it shows how envy and covetousness will lead even capable men astray. Of course AMERICAN POULTRY JOURNAL does carry a lot of advertising for the reason that an ad in AMERICAN POULTRY JOURNAL proves a big puller and pays well—for subscribers read our magazine and believe in it—but the writer of these notes has never yet solicited an ad for the journal and has nothing whatever to do with the business department. Also, we will let you into inside facts not generally known, we are right now pounding out this copy in our office at home on a 30-acre Massachusetts farm, with a whole bunch of brooders and brood hens with chicks of our own in plain sight and within sound of our office windows. Furthermore, in the more than five and one-half years we have been editing AMERICAN POULTRY JOURNAL, we have only been in Chicago three times and our visits to the publication offices could be summed up into a total of less than 14 days in all. Most of our time is put in right on The Anchorage Farm at Silver Lake and such time as we spend away from home is at winter poultry shows or in visiting poultry plants, when weather conditions are favorable and other work will permit. We are willing to wager a good dinner that it will be exceedingly difficult to find a half dozen poultrymen who spend more time on the farm where the real "live chickens" are, and less time in the city, than we do.

* * *

Plant any trees this spring? We did—not the way politicians do it—but in the regular old fashioned dig in the dirt way. Set out some fifteen new shade trees of several varieties and from 6 ft. to 10 ft. tall and we believe that most of them are going to do well. Also put in a lot of nice shrubs. Did not attempt any fruit trees this season, as the gypsy moth and brown-tail moth pests are so exceedingly troublesome and so liable to be fatal to young trees. This part of the state is over-run with the pests and the state authorities have not been able to accomplish anything toward control of this destructive pest. The big cater-

pillars will attack any kind of tree and it has been necessary to cut all hard wood out of pine groves in an effort to protect the growing pines. Asparagus we set out two years ago is giving us a remarkably fine yield this season. We set out large old roots and put them in on very early land richly fertilized, and set crowns at a good depth. Have used the bed as a run for growing chicks to keep down the weeds and to keep the soil well scratched over and the results have been fine. Never saw any better "grass" and the flavor is uncommonly good. Strawberry bed set out last summer has wintered well and is promising. A bed of dwarf curled parsley which was unprotected all winter has come thru in fine shape and is the greenest and brightest spot in the garden. Clover is coming in strong on every spot where we had a brooder or brood coop last season.

* * *

Last month we stated that we were thinning down our flocks to but three varieties, Black Langshans, White Plymouth Rocks and White Leghorns, and so far as keeping breeding pens and males of our other varieties that goes as it stands. But we have a few brood hens among the White Faverolles that have earned the right to stay on our farm just as long as they want to and to raise broods as long as they are willing and able. We never saw better mothers. They stay with their broods long after they begin to lay and mother the chicks until fully fledged. These brood hens prove to be veritable Amazons and will fiercely attack hawk, skunk, cat or other varmint in a way that makes them invaluable as mothers. Also they seem to see a hawk and sound the alarm sooner than any other brood hens we have. Such mother hens are worth their board any time.

* * *

The following letter will interest members of the fancy:

Brattleboro, Vermont, May 4, 1916.

Dear Editor:

I am always glad to receive the American Poultry Journal and look forward to its coming from month to month. I was particularly interested in the May number, in the article by Mr. Latham, and I wish to say Amen! and Amen!! and again Amen!!!

I have been judging poultry for over twenty-five years and have been a breeder of fancy poultry of different breeds and varieties for over forty years and have had some experiences in following out this disqualification humbug. I have seen the foolish, nonsensical rule whereby some of the best specimens that ever graced an exhibition hall had to be "turned down" just for a little speck of down between the toes or a little side sprig on a comb of an otherwise high-scoring bird that sometimes happened to be in a pen and the entire pen had to be disqualified.

Yes, I think it is about time those who have the making of the Standard get down to a few sensible ideas in making Standard law. Dis-

qualify for deformities and cut for minor defects. This has been the ground taken on this subject for years by my long-time and honored friend, I. K. Felch, and no man living is better qualified to express an opinion on this subject than Mr. Felch. His long experience as a breeder and judge enables him to pass upon such questions from experience that has been evolved by study and observation for many years, before there were any helps in the way of poultry publications and writings which the poultry culturist of today enjoys.

It always seemed to me a very good way to show your appreciation of a good deed, or a particular meritorious achievement where it has been of great value to a vast number, by presenting an occasional bouquet before they "pass on" or "cross the bar" and in your editorial you speak of the admitting of the Langshan breed at Worcester in 1883. Reading your editorial brought forcibly back to memory the circumstances connected with the presentation of the petition and the eloquent plea made by Mr. Felch for the admission of the Black Langshan breed to the Standard.

It met with some opposition, not so apparent in the Convention as it had in the committee room, but there was an undercurrent of opposition until Mr. Felch slowly unrolled the petition, holding it at arm's length above his head—and he is no dwarf—the end still rested on the floor. Then he quickly stepped up into the chair in which he had been seated, held the petition in his hand and very dramatically said, "Gentlemen of the American Poultry Association, 1200 Langshan breeders are knocking at your doors. Will you deny them admission?"

The entire Convention was electrified and not a dissenting voice was raised against their admission and this, after months of bitter opposition largely brought about by many of the Black Cochins breeders.

But this is past history. The Langshan breed has never disgraced its early advocates, for they are and always have been a grand breed and I have often regretted their lack of numbers in the show room. May their numbers increase.

Very truly yours,

D. E. Tasker.

* * *

We appreciate Mr. Tasker's fine letter and many others which came concerning this and other matters in May JOURNAL and wish we could print them all. Our mail this spring has been heavier than ever before in our experience and we have been literally "snowed under" with letters, all of which we were very glad to get and to read, but many of which it has been impossible for us to take time to answer personally. However, we take this opportunity to thank our many friends for writing to us and we hope that they will continue to write even tho we may not find it possible to make a personal reply. Such letters are mighty good to receive and they encourage and stimulate one to endeavor to do better and more useful work.

* * *

Ringville, Mass., May 4, 1916.

Mr. Editor:

Please excuse me for intruding on your valuable time, but I wish to express—in my humble way—appreciation of and for your valuable notes and editorials. Those in May issue are worth—to me—the price of the whole Journal for the year.

I was much pleased the way Mrs. Woods spoke of Scott Nearing. It certainly is time

that the people of the whole world do their own thinking.

Yours truly,
E. Barent Pease.

This is just another sample letter from our readers. It is a great pleasure to know that readers of AMERICAN POULTRY JOURNAL find our magazine valuable and that they find food for thought in our columns, which leads them to express their appreciation in so kind a way.

* * *

To all members who intend to attend the annual convention of American Poultry Association at Cleveland, August 8, we commend this letter from an earnest member who attended the last convention:

Lewiston, Idaho, May 1, 1916.
Editor American Poultry Journal:

In view of the apparent helplessness of the American Poultry Association to transact business in convention assembled, in a business-like way, as demonstrated at the meeting in San Francisco, when two-thirds of the convention's time was taken up with hot-air and the airing of personal grievances—if any one thinks this is not so, let them read over the "official proceedings" (?) carefully—I would suggest that some sort of rules be promulgated

and every delegate elected to the Cleveland convention be pledged to their support, whereby we can muzzle a few "leaders"—God save the mark—and get the business before the house handled as we would our private affairs.

As a starter I would suggest a rule allowing a delegate or member to speak on any given subject once only and then only for five consecutive minutes, unless he be the maker of the motion—in which event he be given two periods not to exceed five minutes each. That no delegate or member be allowed to waive his time in favor of another speaker, thus allowing one man to speak his own five-minute period and that of a figurehead, whom he has coached beforehand to so waive his allotted time; unless, with the unanimous consent of the convention.

Another thing which should be taken up is that any report of the Executive Board, when sitting as a trial body, shall be final. If the convention hasn't the confidence in its Executive Board, composed of the State Presidents, and usually twenty to thirty of them sitting on the trial board, then all charges should be tried in open convention before as many members as care to attend. The reason for this rule is that at the San Francisco convention the Harrison-Penick case was before the Executive Board three times and when the matter was finally concluded in the convention hall it was before but a very few more members than had composed the trial board; certainly less than three-fifths of a legitimate quorum.

Sincerely,

Robert G. Bailey.

We note on page 6 of the *Quarterly Bulletin* of the American Poultry Association an item with the caption "Be Charitable" and the sentiment expressed is excellent enough; but we do not notice that the official bulletin itself appears to have any notion of really practicing being charitable. There is the same old knocking of Mr. De Graff, whose membership was terminated so long ago that he is almost unknown to a majority of present members, except for the eternal and everlasting kicking of the man who is down, and the lambasting of the underdog, that continues to be "recognized" and published officially. "Be Charitable!!"—Well, why not practice a little "Charity," Christianity and real Fellowship, instead of so much smug hypocrisy and self-proclaimed "lily whiteness," fellow members of the American Poultry Association? It isn't a fine thing to expel a member and it is not a thing to preen one's feathers and be proud about—it has to be done sometimes, perhaps,—altho we don't believe that punishment ever reformed a bad man or a criminal

Aldrich White Orpingtons

REDUCED PRICES

AFTER June 1st, we offer eggs from our BEST EXHIBITION MATINGS at \$5.00 per setting, and from our BRED-TO-LAY pens at \$3.00 per setting. Every customer receives a copy of our booklet, "From Shell to Show Room," which will enable you to grow your birds to full size in six months.

SPECIAL PRICES FOR STOCK

During June and July we offer our remaining male birds at one-half our regular price, also a nice lot of this season's early hatched cockerels from our best matings at \$3.00, \$5.00 and \$10.00 each, and pullets at \$2.00 and \$3.00 each. These birds when fully developed will be worth several times what they will cost you at this low price.

If you wish to breed White Orpingtons that you can sell at a good price, place your order with us, thus enabling you to advertise ALDRICH STRAIN WHITE ORPINGTONS, for which there is always a demand, as every one knows that Aldrich White Orpingtons have been the GREATEST WINNERS in America's best shows for years, as well as having proven their high laying ability by their records in the National Laying Contests.

MONROE, N. Y.

while human kindness often has done good—and when it is done it is a matter to feel sad about and to, if possible, forgive and forget. There are some of us members in "good standing" today who may deserve expulsion just as much as men who have been "kicked out" of the Association, only fate has been kind and we haven't committed the sin of "getting found out" or refusing to contribute bakshish to Barabbas. For goodness sake, gentlemen who prepare the American Poultry Association *Bulletin*, after you have killed and buried a victim, do not go out and try to kick the sod off his grave. Take a little of your own advice and "Be Charitable!"

* * *

A very considerable number of proposed resolutions and amendments will be found in the *Quarterly Bulletin* which, presumably, is in the hands of all members. It therefore does not seem necessary for us to give them space in this magazine, since they are of interest chiefly to members only. If, however, there should seem to be occasion for comment we may have something to say on the subject in the July issue.

* * *

Bernard Shaw has just published as a preface to his play "Androcles and the Lion" a particularly interesting article entitled, "Why Not Give Christianity a Trial?" Better get it and read it, you will find it decidedly worth while and containing some food for thought. In brief, the argument of Mr. Shaw may be summed up: "Do you want to be rid of war? Try Christianity. Do you want to try Christianity? Then you must begin by enacting equality of income." We quote below a little of what Mr. Shaw has to say; it may give you an appetite for more:

"The question seems a hopeless one after 2000 years of resolute adherence to the old cry of 'Not this man, but Barabbas.' Yet it is beginning to look as if Barabbas was a failure, in spite of his strong right hand, his victories, his empires, his millions of money, and his moralities and political constitutions."

"This man," continues Mr. Shaw, "has not been a failure yet," because his way has never had a fair chance. "The moneyed, respectable, capable world has been steadily anti-Christian and Barabbasque since the crucifixion; and the specific doctrine of Jesus has not in all that time been put into political or general social practice."

"I am ready to admit that after contemplating the world and human nature for nearly 60 years, I see no way out of the world's misery but the way which would have been found by Christ's will if he had undertaken the work of a modern practical statesman."

"It seems, therefore, that we must begin by holding the right to an income as sacred and equal, just as we now begin by holding

the right to life as sacred and equal. Indeed, the one right is only a restatement of the other."

"To hang me for cutting a dock laborer's throat, after making much of me for leaving him to starve when I do not happen to have a ship for him to unload, is idiotic: for as he does far less mischief with his throat cut than when he is starving, a rational society would esteem the cutthroat more highly than the capitalist."

"The thing has become so obvious, and the evil so unendurable, that if our attempt at civilization is not to perish like all the previous ones, we shall have to organize our society in such a way as to be able to say to every person in the land, 'Take no thought, saying what shall we eat, or what shall we drink, or wherewithal shall we be clothed?'"

"We shall no longer have a race of men whose hearts are in their pockets and safes and at their bankers. As Jesus said, where your treasure is there will your heart be also. That was why he recommended that money should cease to be a treasure, and that we should take steps to make ourselves utterly reckless of it, setting our minds free for higher uses."

"In other words, that we should all be gentlemen and take care of our country because our country takes care of us, instead of the commercialized cads we are, doing everything and anything for money, and selling our souls and bodies by the pound and the inch, after wasting half the day haggling over the price."

"Decidedly, whether you think Jesus was God or not, you must admit that he was a first-rate political economist."

* * *

And now, Friend Reader, we want to ask you a rather intimate personal question: Just how much better is your home community for your having lived in it? Have you ever given the matter

a thought? Or have you just lived right along, paying your bills, keeping the peace, and being just an ordinary law-abiding citizen, commenting on or kicking about "local conditions," and "knocking" a little perhaps, but not once considering it your duty to get out and do your part to make conditions better?

We have always been counted a fairly "active" citizen wherever we happened to be located, but we fooled ourselves for a long time, moving about in search of "a desirable location" before we woke up and discovered that a community is a part of one's self and that much energy is wasted moving from one place to another, when if the same energy is properly applied, any place on this green earth can become a desirable part of "God's Country." When we moved here we liked the home farm, the neighbors were just as good as one is likely to find anywhere, but the local school had a poor reputation and it decidedly was not a place to which we wanted to send our own children. The youngsters were sent to a private school and we kicked a whole lot before we woke up to the fact that that school was just as much a part of our work as work on the home place and that if it remained undesirable it would be our fault. Personally, we are not entitled to any credit for the change that a few short years have accomplished; we have just done our little

bit to help. But Mrs. Woods, in co-
operation with a lot of other earnest
citizens, started out to "house clean"
school conditions and they have accom-
plished it. Funds were raised by local
public entertainment in which every-
body generously helped and contributed.
The ladies of the committee have ex-
pended those funds in making the school
grounds more attractive with trees and
shrubs. A school library was started
with useful and interesting books for
children of all ages. A bird talk by a
townswoman, who has made a life-long
study of birds, combined with a bird-
house building contest in which 15 out
of 30 scholars completed creditable bird-
houses and won prizes, helped to in-
crease the interest in the school. The
school now owns a Victrola and nice lot
of fine records of educational value.
The children are eager to do their school
work well and quickly, that they may
enjoy reading by the teacher from books
in the school library, music, or educa-
tional games that have been provided.
The scholars enjoy going to school and
they take pleasure in working to im-
prove school conditions for themselves.
The old school building is still much the
same and would stand a good deal of
improvement, but the little district
school itself has improved a thousand
per cent. Where we used to hear, "I
wouldn't send my children to that
school," the tune has changed and visit-
ors say, "What a nice school, how pleas-
ant it is and how happy the children
seem." The movement for school bet-
terment is spreading. Other schools,
the teachers, the pupils and the citizens
are co-operating in the work of helping
the schools to better themselves. The
work has only just started out, but it is
bearing an abundance of good fruit. It
is a good thing and you should help to
push it along. There are plenty of
things that need doing in every com-
munity—you are a part of the commu-
nity and of the conditions—just get out
and boost for better conditions and try
to interest others and stimulate a little
wholesome "team work." Life isn't just
a "grab game" in which money and
money getting is the only "treasure." If
your local community is not all you
would like it to be, get busy. Just ask
yourself, "What am I doing for my com-
munity, how much better is it for my
having lived in it? Then devote a little
of your time to working for better con-
ditions and you will be surprised to find
what a lot of folks want to climb onto
the "band wagon." What was that you
said about "knockers" and some "greedy,
envious, stingy" persons or ones bitten
by the "green-eyed monster?"—forget
them, if you just keep busy with real
honest and unselfish effort for better
things you will find that some of the
"knockers" evolve into the hardest
workers and biggest boosters. Try it.

* * *

And now, let's talk a little more
"chicken." Do not forget that summer
broods need shade and they need shelter
from sudden heavy showers. Cool fresh
water is also necessary and it should be
placed in a shady spot if possible. Sun-
heated drinking water isn't particularly
desirable, tho the chickens will drink
it if they can't get anything else. Be
sure to fight lice and mites this month.
When the warm days promise well, it
will be a good time to clean up and
whitewash the poultry buildings and a
portable sprayer will do the trick nicely.

WHITE WYANDOTTES

If you want real bargains in prime stock or eggs,
write **CHAS. NIXON**
Box 202, Washington, N. J.

We had to drop these notes and run out and superintend the setting out of some Everbearing strawberry plants which had just arrived. The man doing the work well enough, but we wanted to see that the roots had been well dipped in mud and also we wanted to plant a few of them ourself. It is a heap more fun to dig in the garden and stir the soil with one's fingers than it is to pound this old typewriter to make "copy." If those plants do well, we expect to eat some home-grown late strawberries next fall. We saw a lot sent to market last Thanksgiving time that would fairly make your mouth water. Here's hoping that those berries do well.

* * *

Right in line with our window are three brooders and a nice bunch of White Rock chicks that are as busy as bees and that are working small "automatic feeders" out on a grass run. The way they play about in the May sunshine makes us wish we had decided to grow a few thousand instead of a few hundred; but we reckon we have to stay content with small flocks this season, for we expect to do a lot of running about to poultry farms as soon as the roads get into better shape for touring. Last season we had too many irons in the fire and more work than our one man could do when we had to be away. At this writing we have about 25 hens on eggs and every hatch has to be toe-marked and pedigreed, so we will probably get enough chicken before the season is over.

* * *

The Black Langshans please us mighty well, we used to keep them years ago, but we didn't appreciate them so much then. Now, with many years experience with many breeds, we find that the Black Langshans are fowls of unusual interest. They differ a whole lot from any other fowl we ever handled. Not only are their characters different, but they act and talk differently. The broody ones act a lot more like a broody turkey or wild fowl and they are so easily broken up and started to laying again that one has to be unusually careful in handling the sitters. J. F. Robinson, who won Sharp's No. 62 hen in the AMERICAN POULTRY JOURNAL Langshan article contest, decided that he hadn't time to experiment with sex-control stock and offered to sell the bird to us and finally traded for a lot of Black Langshan eggs from our Ebony exhibition stock. When the hen arrived she acted as if broody, talked that way, but the next day she began to lay and has been everlastingly at it ever since. We consider her a very satisfactory addition to our sex-bred flock. One thing that proves always interesting about this breed is their remarkable wing and tail development and their great activity. They are, in spite of their large size, as vigorous and active as Leghorns, remarkable foragers and not gross eaters for large fowl. We expect to get a good deal of satisfaction out of our lordly Blacks.

* * *

There has been a lot of complaint all over the country this season of poor hatches, altho fertility is exceptionally good and vitality of the breeding stock is reported as excellent. We have not had any trouble with home eggs, except those from the Langshans and we attributed this to the fact that the birds had had scant opportunity to become acclimated before we began to use the

Thousands Could Not Get Chicks At Any Price This Season

The Demand Will Be Even Greater Next Year A Real Business Opportunity for You

Hundreds of Operators of Candee Incubators have written that they have not been able to fill their orders for chicks.

Thousands of buyers have failed to get chicks at any price, because there has been too few incubators to fill the great demand this year.

And the demand will be even greater next season, because records show that the demand for chicks has increased every year in the past.

This proves that you will have all the orders you will be able to handle without hunting for them, and that you will have a most profitable business if you install a

CANDEE

Automatic Sectional Incubator Capacity—1200 Eggs and More

To insure the greatest profit from your hatchery, you want the machine that has proved that it hatches the most chicks and the best chicks with the least attention and expense and no trouble.

Because more Candees are in use than all other mammoth incubators combined and because the Candee is used and recommended by many Colleges and State Experiment Stations throughout the country, buyers of hatching space and day-old chicks have full confidence in the Candee Incubator. They prefer to have their chicks hatched in a Candee and to purchase birds that were brought to life in a Candee.

These are reasons why you will be taking the first big step toward success when you install a Candee Incubator.

Its Exclusive Patented Features

The Candee construction and principles of operation, covered by broad patents, are unchanged from the start, proving that our Incubator was right at the start, is right now and is not an experiment.

It is sectional in both construction and operation. Each 300-egg compartment has its own automatic regulator and there is also a regulator at the heater. Shipped all-built, ready to set up. Additional sections can be added any time.

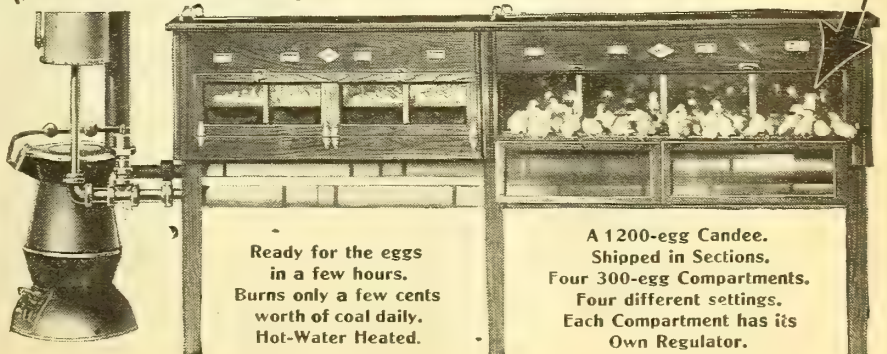

Prepare this spring to start your Hatchery next season. Our Service Department is at your command, and we will be glad to send you plans of incubator cellars and poultry buildings free.

Write for Your Copy of our Big Catalog

It contains pictures of hundreds of hatcheries, large and small poultry plants and State Institutions. This big book also contains poultry information that is most valuable to every one planning to start in the business.

eggs for hatching. From our customers we have had only two complaints of poor hatches; but from readers everywhere we have heard of high fertility and low hatches and a considerable percentage of weakling chicks. We don't pretend to know the cause, but it is quite common for high fecundity, and high fertility, to go with poor hatches. It seems to be in line with Nature's provisions of compensation and she is always prodigal with seed.

* * *

One of our correspondents is certain that you cannot "rest" highly productive hens without actually abusing them. Maybe that is so, but just the same we propose to try to rest such hens as we hope to breed from another season, and we expect to get good results without any abuse. The birds will be well fed, but not forced, they will have an opportunity to sit and to rear a brood and after the brood is grown will live mostly on oats, greens and have very little rich food. In our experience the fat hens

S. C. Brown Leghorn, 3rd prize cockerel, Chicago, 1916. Owned by E. A. Crotser, Fulton, Mich.

lay best and the exceedingly heavy layer is apt to be a very heavy feeder and to incline toward fatty degeneration, if kept right along on a laying ration. It is possible to secure a remarkable egg yield for two seasons and to have the majority of the highly productive flock so fat internally, and particularly in the liver and about the ovary, that they are fit only for market—and must be marketed before they go to pieces. Now while such conditions work out all right for just laying stock to produce market eggs, with the hens sold off as "fat old fowl" at good prices when it is time to "scrap" the egg machines and put in new ones,—we don't want to push valuable breeding birds that way and so we try to rest them and do not encourage them to give maximum egg yield. True, some of them just will lay anyway and have to be fed to keep them in condition; but all problems of feeding, care and management have to be adapted to the needs of the flock in hand and in certain cases to individuals. Here, as elsewhere, it requires experience to know what to do, how to do it, and when to do it.

Horticulture for Poultry Keepers

Conducted by Thos. F. Rigg, Iowa Falls, Iowa.

JUNE, THE MONTH of strawberry shortcake and green peas; of roses and flowering shrubs; the miniature apples, plums and cherries growing so fast that they seem to keep the leaves of the trees in motion as they push them out of their way; the currant and gooseberry bushes heavily laden with fruit; the grapes so plentifully loaded with shot-size fruit where the bloom has just fallen that it will be necessary to thin the fruit; the bees bringing in honey from the white clover fields; the young chicks growing faster than the weeds in a lazy man's garden; the sun shining warm; the sky a clear blue, and God over all. Oh, the joy of living these days.

* * *

This season I bought several hundred two and three-inch paper pots, and planted cucumber, melon, squash and sweet corn seed therein. The pots were then placed in mild hot beds. The seeds quickly germinated and I am looking forward to getting an early crop of these vegetables. When setting the plants in the ground in their permanent place I cut away the bottom of each pot, not disturbing any other part of it. In this way the plants were not injured and did not get a set back. They are now looking fine and promise well.

* * *

We ought to have some very early dahlias this season. Last fall by mistake a dozen clumps were left in the ground. I did not notice this until very late. I mulched the tubers heavily with straw and threw some brush on top the straw to hold the snow. The tubers came thru the winter unharmed and are now large bushes.

* * *

This month we will spray the grapes with pyrox. This will take care of any fungus disease and also any leaf eating insects. Since I began spraying the plum trees with sulfocide once in two weeks, beginning just as the blossoms are falling, I have had an abundant crop each year. I am using it on the melons,

squash and cucumber vines and find that it prevents blight. I use Black Leaf 40 for all aphids on garden and fruit crops alike. I don't see how I could successfully raise a garden or fruit without this preparation. The apple and cherry trees will be sprayed with arsenate of lead once or twice this month, and again in July to catch the second brood of codling moths. Watch the newly planted fruit trees for the aphids. The currant and gooseberry bushes received their supply of arsenate of lead some time ago and are safe from the ravages of the currant worm for all season. The raspberry bushes will be given three or four application of pyrox. This will take care of anthose and any leaf eating insects.

* * *

The following from J. S. Burray in the *Rural New Yorker* is, or ought to be, of interest to every home gardener:

Nearly all instructions for spraying are for large orchards, with power machines. Many

of your readers in this locality, and doubtless elsewhere, are, like myself, owners of a few fruit trees and a home garden. The instructions to use fertilizers, so many tons to the acre, and so many barrels of spraying material, are of no help to us. For the benefit of these readers I will say that I use a hand spraying machine, which is advertised in The *R. N. Y.* I can stand on the ground and spray trees 25 feet high. The cost was \$4, including three nozzles with different sprays. Contrary to the emphatic directions of the different experiment stations, I do not use lime-sulphur, as it is nasty stuff and stains the buildings badly. I use a miscible oil compound for scale, as a dormant spray. I get a 10-lb. pail of Bordeaux, a five-pound pail of arsenate of lead, and a can of Black Leaf 40; for summer sprays. I use a 12-quart wooden pail; use the oil spray as directed one part to 15 parts of water, about two full tablespoonsful of Bordeaux, one of arsenate of lead and one even full of Black Leaf 40, to a pailful of water. I have three old trees of Baldwins, two of plums, enough grapes for my own use, and berries and currants enough to sell a small amount. Also 20 or 25 young fruit trees coming into bearing. As to results, my Baldwins will nearly all grade No. 1 to fancy, and the other fruit does finely; of course I could not do this without pruning and thinning. I therefore say to the small fruit grower, or home gardener, don't think you can do nothing

Why will nurserymen, reliable nurserymen, send out plum trees on peach stock to planters in the sections where a peach tree or any tree on peach root is sure to winter kill? I have noticed for years the result of this action on the part of nurserymen. Every season thousands upon thousands of these trees are sent out to planters in Iowa, Minnesota and other states located in the cold zone. They never survive the first winter. It is a financial loss to the planters, besides the loss of a year's time in growth of trees. A few years ago many people saw the magnificent crop of plums of a certain hardy variety in my yard. The next spring each of these persons sent out a number of trees of the same kind. A year later they were digging them up. The trees were on peach root, and, of course, died during the winter. This thing hurts the planter and the nurserymen, but the nurserymen keep on sending out such trees. When ordering plum trees for planting in sections where the peach is not hardy, specify that such trees must be on plum root.

* * *

In April I dug up more than 200 raspberry plants which had come up along a fence bordering the orchard. The seeds from which these plants grew, were dropped by the birds. I am sure that out of all the plants I will get a lot of worthless ones. In fact I doubt very much if I will get one that will be worth saving, that is better than the ones of established kinds I have in the yard. But I will have the fun of hoping and watching them grow.

* * *

In answer to F. J. Jones, Illinois: The cherry slug is a small dark green larvæ that skeletonize the leaves. A second brood appears in August. There are usually two or three generations during the summer. If you will spray your trees with scalecide each fall after the leaves have fallen and in the spring before the buds swell you will have little trouble from the slug. Spray with arsenate of lead to kill any present slug.

* * *

If you did not plant a tree this spring you did not do your duty.

* * *

Says P. C. Stark in *Tree Talk*:

Now comes another authority, State Zoologist Surface of Pennsylvania, with assurances to the Audubon Society that spraying fluids are not harmful to birds. No use, professor, for these dear folks, whose cats are the deadliest enemies birds have, simply won't believe it—don't want to believe it. A blue jay might take on enough arsenate of lead to kill him—provided he fell into a mixing tank. It's a well known scientific fact that in the process of pecking holes in perfect apples and peaches he never suffers any set-backs to his digestive apparatus peculiar to humans—never gets put off watch.

Ripley Mfg. & Steel Boat Co.
Box #2, Grafton, Illinois

Year after year our Montmorency cherry trees out-yield all other varieties. I am convinced that this is the most valuable cherry for the home and commercial orchard. In buying Montmorency trees be careful in placing your order and insist on getting the large fruit variety. There is a Montmorency tree being sold by many nurserymen which bears a small fruit.

I am in receipt of a number of letters from people who have been solicited to take stock in commercial orchard companies. In each case I have advised my correspondents to have nothing to do with such enterprises and to refrain from investing in any such schemes.

A short time ago I attended the annual meeting of the fruit growers' society of our Iowa County. There were a large number of people present. Many women were there and they were as interested as the men. I was glad to see these women present, and glad, too, to notice the interest they took in the discourse regarding the planting of ornamental shrubs, etc., on the farm grounds. If the wives and daughters of the farmer will insist upon the home grounds being made a beauty spot instead of a dumping ground for machinery, they will soon change the present deplorable condition everywhere apparent thruout the country.

The blue jays are again killing my little chickens. This morning I heard a hen in the orchard in a word quarrel with something. Upon going to where the hen and her chicks were, I found a

blue jay had killed two chicks and was sitting in a tree evidently taunting the mother, and boasting of his skill as a murderer.

In answer to Thos. Murray, Minnesota: I do not believe you will be able

to plant the Grimes Golden apple in Northern Minnesota. It is not hardy so far north. You can graft Grimes Golden scions onto Wealthy trees as you suggest, but I would not, were I in your place, do this to any great extent. Work a few trees this way if you desire, but

Death to Lice Ointment kills head lice on little chicks. Thousands of baby chicks are lost every year from this cause (the lice being often mistaken for pin feathers). It does not pay to wait until the chicks begin to droop and die when Death to Lice Ointment will kill the lice just where they are without injury to the chicks.

Price 10 cts. and 25 cts. per box.

no more. You can successfully raise the Wealthy and McIntosh Red. They are high quality apples and always bring a big price. If you will devote all your attention to these two excellent varieties and not try to raise kinds which nature has made it impossible for you to grow, you will find pleasure and profit in your orcharding.

* * *

At this time the Dunlap, Haviland, Sample and Brandywine strawberries promise to be our best crop, as they have been for these fifteen years.

* * *

I am glad that Dr. Woods has added Langshans to the poultry department of The Anchorage Farm. It is pleasing to see the way this grand good fowl is coming back. I bred them for several years, then was without them until two years ago, when I put in a pen. I find them to be splendid layers of large brown eggs. And as roasters, they are simply the best ever. Wonder why some people who are so fond of turkey will denounce the Langshan because of the color of the skin of the carcass?

* * *

It is evident that gooseberries can be too large to meet the approval of the housewives who buy the fruit. For two years I have found that a large majority of my customers do not want the Portage. This is a remarkably large gooseberry. The customers who have never tried them hold that they must be inferior in quality to the smaller Downing and Houghton and Oregon Champion. In this they are mistaken, but I do not press the matter. I found out long ago that it is best to give people what they want.

* * *

We had the finest asparagus this year that we ever had. The bed was getting old and last season when we quit cutting I had the bed covered to the depth of more than a foot with stable manure. Then on top of this I scattered a goodly supply of hen manure. The way those plants did grow and the crop they produced this season was marvelous. Shall keep the bed thus mulched in the future. Think this a good way to renew an old bed. This mulching will save work in weeding, too.

* * *

For the first time in years the cut worms have done no particular damage in my garden. Since I began plowing the garden in the fall, I have seen an annual decline in the damage done by cut worms. The turning up of the ground in the fall—I plow as late in the fall as possible—seems to kill off the worms.

* * *

As I write these lines I stop occasionally to listen to the chatter of a pair of robins that are building a nest in an oak tree just beyond the bay window of my study. The female has but one foot. I first noticed this four years ago. Each year this pair has built their nest in this same tree and every spring I look for

Try This Plan of Feeding Poultry

You will be surprised at the increased egg yield it will produce.

In the Morning To each 100 hens feed 5 or 6 quarts of Schumacher Scratch Grains scattered in litter that is 1-ft. deep.

At Noon Give them 3 or 4 quarts of Sprouted Oats (dry) and keep Schumacher Mash Feed in the hopper all the time.

At Night Give them 10 to 12 quarts of Schumacher Scratch Grains. Don't let them go to roost hungry. Keep this plan up regularly for 30 days, giving attention to housing, range, etc., and you will find a very marked increase in egg production.

SCHUMACHER SCRATCH GRAINS

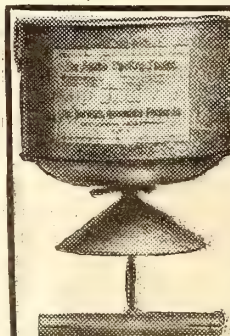

is a scientific combination of selected cereals which our feed experts have found by analysis and long experience form the most perfect combination for egg production. The feeding plan suggested here will make big profits for you. Try it. Get a sack of Schumacher Scratch Grains from your dealer. If he can't supply you, write to us.

The Quaker Oats Co.

the coming of this cheerful little lady and her husband. The berry bush crop and the cherries bring a large number of birds to our place and while they consume considerable fruit, I do not complain. I would not be without them. Here on our place are nests of robins, brown thrush, woodpeckers, blue jays, blue birds, wrens, turtle doves, grouse, beak and several others. I tell you, we have here rendered the finest music the world produces. And these songsters destroy a vast amount of worms and insects which would be harmful to fruits and other crops. So you see I would be an ingrate if I begrudged these happy, useful birds a little fruit.

I have spoken before of how some three years ago I top-worked a Haas apple tree with Wealthy scions. Today the Wealthy scions are good branches and will this season give me a nice lot of apples. It shows how easy it is to top-work an apple tree over to a desirable variety and how soon we can thus get the superior fruit. If you have a worthless apple tree on your place do not cut it down. Top-work it to some variety you are especially fond of and you will soon be thanking me for giving you this advice.

I notice that in about all the nursery catalogs I receive the statement is made that the St. Regis red raspberry is a poor plant maker, hence the high price charged for plants of this variety by the nurserymen. I don't believe it. Mine made so many plants last season that they got away from me and this patch was a bad looking one. Early this spring I grubbed out young plants by the hundreds. Now I have to do the same thing again. I find them to be the most troublesome of all red raspberries in sending out new plants.

Do not hesitate to thin out many of the apples and peaches. I know it takes courage to take off at least half of the fruit from a tree, but if the tree is too heavily laden with fruit, it should be done. I am willing to admit that when it is necessary to do this work on our place I let the helper do the thinning!

Some one must be promoting a scheme to unload gladioli bulbs on a large scale. I am in receipt of a number of letters from people who say they are thinking of going into the raising of these flowers and expect to make much money. I think all such persons will find that they will not be able to sell their flowers in any large quantities at paying prices. Better leave this branch of gardening to the specialists who are located right to dispose of the flowers on contract.

It means much work in the garden and orchard from now on until winter sets in. But it is not all work by any means, this caring for the growing things. I just love it and could not rest in idleness and see "the other fellow" do the work. So I am counting on a lot of fun out in the open this season as usual.

Readers Experience Department

Successful Back Lot Poultry Raising.

I AM BEGINNING my eleventh year as a breeder of White Leghorns and have found them so satisfactory in every way that I would like to give a little of my experience, which I trust will prove helpful to others.

Like many others, I began breeding poultry as a side line and it has continued a side line with me until last year. My first poultry house was a store box about three feet square, with one side open and a small run attached. This was in the back yard in town, in the spring of 1905. From the small flock thus housed I was getting more eggs than we needed for family use, there only being two of us, and the surplus was salted down for winter use. As my regular employment required about ten hours a day of my time, I did not give a great deal of attention to the poultry.

Three years later I moved to a place with a good sized back yard and contracted a severe attack of the chicken fever, from which I have never recovered. A genuine attack of this disease is, I believe, incurable. At any rate I could not see this nice space go to waste, so I put up a 10x10 ft. house and began to read up on the poultry business. I read everything I could get on the sub-

ject, with an unsatisfied appetite for more all the time.

The following year I built another house 10x25 ft., divided into three pens and stocked up with White Leghorns. I had been a constant reader of AMERICAN POULTRY JOURNAL for some time and purchased a Standard and spent a good deal of time reading up on my breed. In 1910 I made my first exhibit, entering a hen and a cockerel at Pittsburg, Pa., and winning fifth on hen. This capped the climax for me and I have not quite gotten over it yet. The winning of that fifth prize ribbon gave me about as much pleasure as anything I ever did in my life. I managed to learn quite a little at that show. In fact in that week at the show I learned more than I had at home during the five years I had been breeding poultry. It was my first poultry show, but I have not since that time missed going to at least one good show each year.

During the years that followed I raised a good many prize winning birds on the small space of my back yard. I put in a lot of hard work and many hours at night, as I had no other time, keeping about one hundred birds regularly and frequently ten to twenty-five extra male birds. Soon after showing the first time, I discovered that I was

not quite satisfied with the stock which I had previously thought fine, so I bought two sittings of eggs and some baby chicks of as good stock as I could afford to pay for. These turned out fine and put me on the right road and I regard that breeder as one of my best friends today. During the next few years I won at most of the shows in this section, including the Pittsburgh show each year. I mention this fact to show what can be done by a busy man in his spare time on a back lot. The fact that I have worked hard and earnestly should not be overlooked, but that makes the winning all the more interesting. The harder the battle to accomplish a worth while thing, the more glorious the victory. Without work we accomplish nothing. Things that come too easy very seldom amount to anything.

In mating, I value the male bird very highly, tho we cannot breed good chicks without good females. But I have made it a practice to keep as many extra males as possible, from ten to twenty-five, tho I only had room for seven or eight matings. I never sell a good male bird, unless I have his sire or some of his sons or daughters to breed from. I prefer small matings and all breeders must be strong and vigorous and typical of the breed.

ARISTOCRAT BARRED ROCKS

Box A, Fort Wayne, Ind.

For the past three years I have made a profit of \$200 and over above all expenses, excepting labor. As the work was all done in my spare time and I have greatly enjoyed it, I feel that the profit may be counted in more ways than one. I have no ten thousand dollar specimens or world wonder records, but my little back yard plant has more than repaid me many times with pleasure I have derived from the work. I am now giving my favorites all my time, having given up my other work last year. I have a nice little farm of twenty-four acres which I intend to devote exclusively to poultry raising, and make it my life work.

Sharpsburg, Pa. J. H. LEFFLER.

Producing and Preparing 1915 Exhibits.

Early in the year of 1914 I began to think that a small pen of chickens would be profitable. Accordingly I sent for a number of catalogs and mating lists. A Pennsylvania man sent me a catalog of over fifty varieties of land and water fowl. I straightway "fell in love" with the Silver Wyandotte and ordered a setting of eggs. Allow me to state that raising chickens was no new adventure for me, as I always was chicken boy at home, not so many years ago.

I hatched eight chicks. Not one grew to maturity, owing to low vitality. I was not financially able to invest a great deal, so decided to bide my time until the next year.

During the summer, I purchased a fine open-faced Silver Wyandotte hen, good in all ways except the comb, which was somewhat too smooth. In January of 1915 I bought from a prominent Ohio breeder an excellent line-bred cockerel and mated him with this hen. Perhaps, my reader, you are saying "What a foolish waste of time crossing two strains." I did it with my eyes open, however, and was sure that the birds had the necessary qualities which go to produce the right kind of offspring. When I had saved eleven eggs (one almost every day), I placed them under a motherly hen January 26, 1915. Four or five days later I found that the hen had cracked the shell of one of the eggs, but a test showed a live germ; I put court plaster over the fracture, placed the egg in my incubator and hatched a strong chick. The hen, glory be! hatched the other ten. They were the kind that live and grow.

These chicks with the hen were placed in an open front coop two and one-half by six feet raised about two feet above the ground. The hen was fastened in one end by means of a slat partition. Fine chaff was spread over the floor to the depth of four inches and, after the first few feedings of boiled egg and stale bread crumbs, the best quality of commercial chick food that I could buy was sprinkled in the chaff. Bran and meat scrap were given them at end of one week; also green food was supplied in the form of finely chopped grass, lettuce or sprouted oats. Charcoal was fed occasionally and grit and shell given

C. GUY MYERS

SIDDONSBURG, PA.

as a matter of course. As soon as the ground warmed sufficiently they were permitted to run out, but only in a back yard, for I live in a city whose population numbers about thirty thousand. I spaded my runs and planted sun flowers for shade.

When the chicks were about ten weeks old some enterprising youngsters who liked to see them eat, fed them a bunch of tough grass and I lost all my cockerels but one, and lost one pullet from their becoming crop-bound. I now had one cockerel and five pullets.

As they began to take on color and get their set there was no prettier picture than my yard of Silvers. Nice open centers and narrow black lacing were distinguishing marks of these birds.

As to the rations used during their growth to maturity, permit me to say that I used as much variety as possible. A mash with a small percentage of meat scrap was kept before them at all times, they got all the available table scraps, and grains fed in a deep litter of straw. These grains were for the most part commercial scratch grain, and at times a mixture of ten lbs. wheat, ten of cracked corn, and five of oats. This last was not fed until the birds were pretty well developed, as I do not like to feed oats in any quantity while my chickens are young. This does not mean pin-head or steel-cut oats which can be fed with safety to the small chick and are an excellent food.

My house was thoroly cleaned every week, and sprayed with a good disinfectant. Roosts were painted with coal oil and crude carbolic acid to keep down mites and lice, and the birds were also given a good dusting every now and then.

At the Kanawha County Fair held in October, 1915, I won first and second pullets, only having the two entries. At the meet of the Charleston Poultry Association, held January 10-15, 1916, I had entered seven Silvers and they were placed as follows: First cock and 1st hen—shape and color specials on each; 1st, 2nd, 3rd, 4th and 5th pullets. You will note that this last exhibit was in 1916, but the birds exhibited, excepting the first two, were raised and fitted for showing in 1915, so I feel that I am not getting beyond my subject.

A word in conclusion: My readers are either thinking that I "happened" to raise either the "best birds in the world" or that I had no competition. The last surmise is correct, but listen! Judge Keeler of Indiana placed the awards. Commenting on the birds he told me that my hen was worth \$20 and that the first pullet was as good as the hen. The remaining pullets were all of high quality and really there was but little difference between the first and fifth pullets.

It is not necessary that Silvers be washed for the show room, except the feet and legs, a damp cloth gently brushed over the plumage being sufficient unless the feathers have been badly soiled. E. N. WILLIAMSON. Charleston, W. Va.

Getting a Start with Poultry.

My husband was the "village smithy" and we thought we could add to the family income by keeping a few fowls. We finally decided that we would invest in the best to be secured, and as the ads mostly seemed to agree at that time that

White Orpingtons were the one best breed, we planned to attend the next local poultry show and get our birds.

Now, my hair has a tinge of auburn, and bright colors have always appealed to us, so it is not to be wondered over that the results were as they were.

When the show opened on a Monday morning, Will closed up his shop, and we went to view the fowls and make our final decision. Once inside the show room our fancy for brilliant colors got the better of the printed ads, and we found ourselves studying carefully the Rhode Island Reds,—they did have a brilliant color.

A little woman with blue eyes came up and tried to get us to subscribe for her magazine, but Will turned her down pretty cold. There was a man in the show, with a bright, strawberry roan beard, he too was selling something, and we decided that one look at him was all we needed. We got around by the beautiful Brown Leghorns, and they showed some wonderful colors too, but that strawberry roan beard was edging over that way, so we slipped back to the White Orpingtons, thinking the man would come in, and we would make our purchase and get out before the strawberry roan sold us something we did not want. Then, just before we got to the coops, the aisle was blocked, and someone said, rather cheerily, "Are you interested in chickens?" And there stood that diminutive imitation of a man! At close range the color of his beard was not so bad, it was what would have been called a pink, if he had been in the United States Senate instead of a poultry show. Of course, Will tried to turn him down, but failed, and then I don't

know just how it happened, but he showed us the White Orpingtons, and then the Reds, and then the Brown Leghorns. Why, say, what that man did not know about poultry,—any variety, had not happened yet, but, of course, we see now several places where he was only guessing, but it was all good for us. We asked all the conceivable questions and a good many others, yet he was right on deck with the correct answers, at least the answers looked to be correct, and it came time to close the show and we had not bought a chick or an egg.

Will said we would have to go again the next day: so we did, and the next one too, and talked to the man with the pink whiskers by the hour. Of course we subscribed for his magazine, and then the little blue eyed woman came around, and if that old scamp didn't introduce her as his wife!

Well, when Saturday night came we had learned more about poultry keeping than some of the experiment stations have learned yet, but we had not bought a bird or an egg. Now possibly the color of that pink beard had been too great an attraction; but he could paint a word picture so glowing that a rainbow would hide its face for shame; yes, he could gild the sunbeams, and use a bright summer day for a background; we liked brilliant colors, and he actually could paint a bright spot on a day on the Sahara.

Saturday night came and we had not yet made the purchase, it was almost closing time and the last night of the show. We asked the man with the beard to settle the question for us and he did, right there and then. We walked

out of that show room with a cockerel in one hand and a pullet in the other, but they were not White Orpingtons, neither was a single feather on those birds the color of the pink beard. Those birds were a handsome pair of greenish black, silken coated, *Black Langshans*. We have a fondness for bright colors, and that green-black is the brightest color we have ever seen, except the strawberry roan-pink of the beard.

We purchased a few more birds from other breeders, and sent back east to some of the well known exhibitors, and secured the very best we could find, paid good prices and raised a fine flock. When fall came, we asked the man with the pink beard to come out to see our flock, and while he was with us, he selected a string of fowls for us to send to the fair. If he did not go thru the whole flock and pick out the very birds we had from him, and told us "to rub the dust off with a dry cloth, and send them along."

Well we did, knowing too that he would be there exhibiting against us. Then when we got into the tent, at the fair grounds, we heard that the judge had been instructed to "set that fellow down so hard he would stay down," and we knew it was all over but the tears.

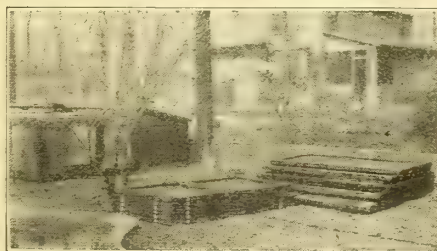

When the prizes were up we went down the aisle with a heavy heart, but the judge had "set him down" all right, pretty hard too, for there on our own coop was the blue ribbon. That man had bred the winners, selected them, let us raise them, and then he had shown birds that ours could beat, and we had won.

We have shown our birds a good many times since then in different shows

MULLER SECTIONAL Poultry Coop and Runway

Picture No. 1 shows the new Muller Sectional Poultry Coop and Runway, knocked down—the runway on the left and the coop on the right. It is easy to assemble in less than two minutes' time, without the aid of any tools. (Patent applied for.)

Picture No. 2 shows the same Coop and Runway set up. Note the galvanized rods passing through screw eyes, holding sections together.

No. 1

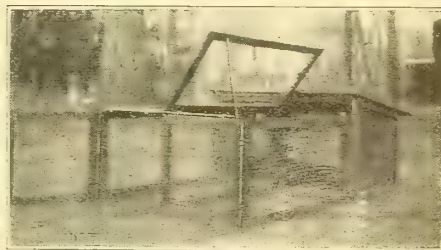

No. 2

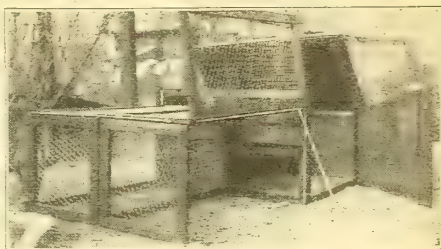

Picture No. 3 shows how rods may be drawn to open frames in any way desired. The entire frame work is sectional, with rod hinges, making it possible not only to open in any manner but to add to or subtract from your equipment at pleasure. All sections of runways are of one of two sizes—19x19 inches or 19x38 inches. All frames are interchangeable and reversible.

Picture No. 4 shows interior of Muller Sectional Coop. It is divided in center by removable partition, providing ample room for a brooder or setting coop for two hens. Coop is 39 inches wide, 24 inches deep, 25 inches high in the front and 18 inches high in the back. Each section of coop is provided with sliding door, which may be raised to any height.

The Muller Sectional System is a great improvement over present Brooder Coops and Runways. Sections are constructed of seasoned stock, treated with creosote. All fastenings are galvanized. Coops and Runways are so constructed as to be used either double or single, partitions being removable. Muller Sectional Coops and Runways are easy to clean, easy to move around and easy to take down and store away. Double Runways, complete with rods, etc., \$4.25; Coops, \$6.25. Shipped knocked down. Double Coop and Runway, \$10.00, F. O. B. Waukegan, Ill. Illustrated booklet free.

and have regularly won our share of the ribbons.

Our birds are bred solely for their handsome plumage, being the wife of the "village smithy," and having a substantial income, there is no need for me to devote my time to the utility end of the poultry business, and as we chose our breed solely on the fancy points of that strawberry roan-pink beard, and the beautiful pictures they could paint, we have had no occasion to alter our first decision.

That man could convince a blacksmith that every horseshoe was made of gold, and he did, and if we could start to change now, he might come back and sell us bantams, so we are contented.

We both have a fancy for bright colors, and black is usually thought to be a sombre hue, but the black of a Langshan, with its greenish sheen is like the changing colors of a piece of fine silk. No doubt this has helped to keep us contented with the choice, but it was the fine points, of that pink beard, and the wonderful word pictures that man could paint that made the selection for us. We simply decided to keep them, after he had sold them to us.

Far be it from my intention to drag in here any reference to the practical end of the work, but those hens do NOT, most positively do not lay two eggs every Sunday, they only do that on some special occasion, like Christmas, New Years and the Fourth of July, or when some member of the family has a birthday, but, of course, all really good Langshans lay two eggs on the 16th day of May, for that is the birthday of the patron saint of the breed, and they have to then, even if they are broody.

They have given us many a fine breakfast, and they furnish some handsome ten-pound roasts, but their really true value lies in the fact that they have proved themselves to be perfectly satisfactory and we have never regretted our choice. And this leads me to remark that if you select a breed that proves to be all around satisfactory to you, you can and will make a success with it.

Spokane, Wash. MRS. A. B. HUNTER.

Likes the Barred Rock.

Fourteen years ago I took up the breeding of poultry and after seven years experience with different varieties and colors in those varieties, I purchased a pen of Barred Plymouth Rocks, and with the sole idea in mind to breed them from a fancier's standpoint. There are certain requirements that any breed must possess to be considered a fancier's fowl. Type alone will not suffice, neither will color, nor will the two be sufficient to substantiate their worth. There is still another quality they must have and that is the necessary foundation of blood lines in the beginning to produce specimens that show breed characteristics in type and color, and backed up with a proper amount of sturdiness and vigor.

There has always been an idea prevalent among fanciers that the Barred Plymouth Rock is a hard bird to breed to standard requirements and that is one reason that I took them up, as I

wanted to start with a breed that the things most desired would be hard to obtain, but when you succeeded in doing so, the satisfaction far outweighed the effort. Now, the type should be pleasing or all the beauty in color will be lost. The Rock type has just enough curves to make a handsome profile, enough length, breadth and depth to facilitate egg production and weighing qualities, which is certainly an asset to a fancier's fowl, for without these requirements they would fail in the power of reproducing a better progeny.

What is more handsome about a fowl than one or more color contrasts of the plumage of a bird taken as a whole or of an individual feather? We admit that a white fowl is handsome, as is a buff or a red, but they will not stand the sun nor rain like a Barred Rock and will fade to a much lighter shade in the Buffs and Reds before they molt and from the beauty of an individual feather there is no comparison. Then again the Barred Rock has an individuality in markings possessed by no other fowl. And when those colors are intensified by barring that runs straight across a well shaped feather evenly spaced in the

The above illustration shows how to remove lice from chickens by the use of Licecil vapors. Licecil is made by Metzger Mfg. Co., Box 35, Quincy, Ill.—Adv.

black and white bar and meeting the corresponding bar on the adjoining feather, so as to form that sharp ringy appearance, so pleasing to the eye, the effect is so decided that it appeals to the most exacting.

Now to get down to "brass tacks" on the beauty side, let us take a feather from a male or female. There is more to the color than just black and white and more to the barring than just bars. The black should be a soft shade, stopping short of positive black and the white a grayish white, not an absolute white. The barring should not be only straight across, but the feather should be barred from root to tip, and as many bars as is possible to get on it, with the tipping a black bar and the feathers inserted in the body, so that the specimen, when finished, has that rich, sharp, snappy, clean cut, ringy effect possessed by our "down to date" birds.

Just imagine a bird with 100 bars on the saddle hangers, and carrying same definition in color and barring all over and possessing a type that is ideal and the color of that beautiful blue shade.

DIAMOND CORN GLUTEN MEAL

FOR a profitable egg yield, hens must have more protein than straight corn or grain can supply. You want an *available protein* and a *low-priced protein*.

Protein from corn—a natural poultry-food source—is far more digestible, hence more available for hens than the protein in beef or packing-house scraps—also it costs much less.

Diamond Corn Gluten Meal is the most concentrated and lowest priced corn-protein on the market. Guaranteed 40% protein, 1.5% fat, 4% fibre.

This is the reason that Diamond Corn Gluten Meal is the chief ingredient in the feeding formulas used by successful poultry men.

Mix Diamond Corn Gluten Meal with your low protein starchy grains for a month. Watch your egg yield and be convinced.

Write us for feeding formulas.

If your dealer does not carry Diamond Corn Gluten Meal write us and we will instruct you where to get it.

Such a bird has a right to be one of the "Grand Old Breed." There are other varieties that have a black and white plumage, but they do not have to get so many markings, bars or pencilings or lacings on one feather. But still we have other things to consider in a fowl for the fancier. The popularity of the breed. The best barometer on a breed's popularity is the number at the shows each year, and it is an assured fact that there are more Rocks (Barred, I mean) shown in the United States today than of any other breed or variety. Then, again, the commercial side of a fancier's bird is of great benefit to the breed. There is no fowl today that will command a better price, whether the specimen be of ordinary or superior quality than a Barred Plymouth Rock and there has been some of the greatest successes in poultrydom made with the Barred Rock.

There are thousands of fanciers in the country breeding this fowl and still there is always a scarcity of stock every year. Today we find fewer judges competent to pass on them than upon any other breed or variety, and why? Because they are a life's study for the greatest master. As a final summary for this "Grand Old Breed" it will repay you in pleasure and profit just to the amount of "gray matter" and effort you put in the breeding of them. A type that is neither too long nor too short, too high nor too low, with a nice, neat head, a fiery red eye, and that sharp, snappy, ringy narrow barring, evenly spaced, running from root to tip, possessing the proper contrast of color to obtain that rich even blue shade, and the whole intensified by a firm, well set, five-point comb and a rich yellow beak and shanks. To me this is the "Last word in a fancier's fowl."

Questions and Answers

Conducted by
Prince F. Woods, M. D.

Eggs Smell and Taste Queer.

Q. Will be grateful if you can throw a little light on a subject that has upset us considerably. We have many chickens and they are kept well in a large sunny place on our farm. We have always had the best eggs imaginable and our friends at week end house parties have raved over them. Lately, for some unknown reason the eggs have been queer—not really bad but just straight funny in smell. I had one boiled for breakfast this morning and—oh, well, I don't want another egg for a week. Please tell me what you think is wrong. What are we doing or what are we not doing?

Frontenac, Minn.

G. G.

A. There are many things that will "taste" eggs and give them a queer or bad flavor or odor. To say what is wrong without more information is difficult. The hens may have access to wild garlic on range. It is not unlikely that some strong smelling insecticide may have been used in the nests. The hens may be eating turnips, onions, or other strong flavored food. There may be a few hens that have "vent gleet" or an ill-smelling discharge from the vent and such hens are apt to infect the others and their eggs always have a bad odor. They can only be discovered by examination of the fowls. Any such birds should be removed from flock at once. Clean up the poultry house and be sure to whitewash nests, sun them well and use only new, bright, clean nesting material.

Do not use any medicated nest eggs. Bear in mind that eggs are as easily spoiled as milk and keep them in a cool place away from strong odors.

Feeding Leghorns.

Q. I have bought 200 Leghorns for eggs and as a foundation stock. I have 100 in a pen and they will have free range. Please advise me as to best way to feed them and how many times a day. Answer in the JOURNAL. Soil on our place is sandy.

Maple Valley, Wash.

W. S.

A. Feed scratch grain twice daily in good straw litter. Morning feed about one moderate sized handful per bird of a mixture of 32 lbs. whole oats with 10 lbs. wheat. Afternoon feed equal parts by measure of whole oats and cracked white corn, about same quantity. Use only good plump sound grain. When not on range or when greens are not plenty, supply good fresh green food daily, as much as they will clean up eagerly. Keep dry mash before them in a hopper. Open hopper about noon and close at night. Dry mash mixture made as follows: 50 lbs. of good, bright, well-cured cut clover; 100 lbs. each of coarse wheat bran, fine white fancy wheat middlings, whole ground or rolled oats, white corn meal, gluten feed and best quality fine ground beef scraps. Keep grit, oyster shells, charcoal and fresh water where birds can have free access to same. Scratch grain can be used in automatic feeders swung above litter,

one feeder for each 25 hens, if hand feeding is not convenient.

Losing Feathers on Head.

Q. I have 300 hens in one house. Last March I noticed one hen with no feathers on back of her head. I paid no attention to it, thinking it might be due to the activity of the male. Now to my surprise there are about 60 hens with

Your brood may be smaller than his, but you can get the same results!

"We have at present 2200 chicks in two flocks and they have had nothing but H-O Steam-Cooked Chick Feed, sunshine, water and exercise. Never had a better, smoother lot."

H. E. M., Penn Yan, N. Y.

If this breeder finds it worth while to feed H-O Steam-Cooked Chick Feed to his thousands of little chicks, won't you give it a trial, too?

The experience of big poultrymen proves conclusively that profits lie in *right* feeding. H-O Steam-Cooked Chick Feed is the right feed for chicks because every chick can digest it.

Being free from excess moisture, H-O Steam-Cooked Chick Feed does not sour or spoil. You find a smaller percentage of sick chicks and practically every chick is healthy and vigorous.

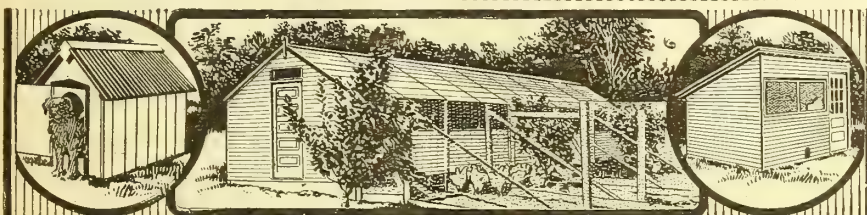

No matter how few chicks you have, this year feed them

the same trouble. Some of them have heads that are very red and seem sore and it extends back on neck for an inch or so. They lay just the same, nevertheless I am positive that whatever they have is catching. I would not ask for a better strain of Barred Rocks than I have now and want to put a stop to this trouble.

Springfield, Mass.

F. P.

A. Baldness is due to parasites. Dust your fowls well with good fresh Persian insect powder, work it into the feathers all over the fowl and right down to the skin. Rub a little sulphur ointment on bare parts where feathers have been lost and also rub a little into the feathers above and below the vent. Get the birds onto a well shaded range if possible where they will have an opportunity to run to the weather and to wallow in the moist earth. If there is not an ample supply of green on range, feed green food freely.

Is Cockerel Sterile?

Q. I have a White Wyandotte cockerel one year old on May 10, 1916—this is written on May 6—and he is mated to eight hens that were one year old some time in April. I have set five settings of eggs, 65 eggs in all, and have not gotten one chicken. The eggs do not seem to be fertile. This cockerel is "Regal strain" and is as pretty as a picture. He seems attentive enough to the hens. The birds are all well fed. He is three times as good looking as his brother and I would like to keep him if he is likely to be any good. Have had several poultrymen looking at him and they call him a "fine specimen," but some say he will be all right next year and others that he never will be any good. His brother is mated to six pullets, fed and cared for just the same, and I have had 90% hatches from them.

Beacon, N. Y. V. W. B.

A. It is quite likely that the cockerel is sterile, either from lack of development or from abnormal development of testicles. In such case the bird might be an unusually attractive specimen and very attentive to his mates, but you would not get any fertile eggs. If he proves sterile, he will never be of any service. However, you have been attempting to breed him when rather young. Would mate him now with two unmated two-year-old hens and after a week test all eggs carefully by incubating them and testing after six days incubation. In a month's time you should be able to learn whether or not he is really sterile. If sterile, kill and eat him. If he shows fertility, keep him with the old hens on a fair range and feed only enough to keep him in good order, until you wish to use him for breeding next season. If necessary to use old hens which have been mated, the test will take a little longer. Keep the eggs away from a male bird until their eggs run unfertile and then mate the

hens with the cockerel and proceed as advised.

Corn Chop.

Q. (1) What is the "corn chop" mentioned in the feeding formula on page 31 of "Ducks and Geese"?

A. (1) Simply a coarse corn meal. Sometimes applied to a coarse feed made by grinding ear corn, cob and all.

Q. (2) Will sunflower seed make a good feed for ducks? Should it be ground?

A. (2) We have never fed it to ducks. If you do not feed it too freely, it should be all right either whole or ground.

Q. (3) Will ducks lay as well if the drakes are kept away so that the eggs will be sterile?

A. (3) Yes.

Q. (4) How long after the drake is put with the ducks before the eggs come fertile?

Rosendale, Wis.

G. D. T.

A. (4) That depends upon stage of laying. If ducks are ready to mate you may get fertile eggs in three or four days. Generally it is safe enough to set the eggs after drake has been with the ducks for a week. Four or five ducks are enough for one drake.

Minorca Chicks.

Q. Being a subscriber for the AMERICAN POULTRY JOURNAL, I feel that you will give me some information, if possible, thru the columns of your journal regarding the following: I am a S. C. B. Minorca fancier and purchased a cock bird of this breed from one of the largest S. C. B. Minorca breeders in the United States, and some hens from a breeder quite well known, both being members of the American Poultry Association and of the S. C. Black Minorca Clubs. From each hatch from this mating I have received from one to three chicks of almost a solid brown color. After a few days they develop brown stripes down the back similar to a Brown Leghorn. I toe-marked each one and have watched them carefully and find that as they advance in age, they seem to turn black, some of the older ones, which are sixty days old, are entirely black, while others carry some of the brown on the backs and especially on the neck close to the head. I would like your explanation of this, if possible, and any information you can give me will be greatly appreciated.

San Antonio, Texas.

C. F.

A. Don't let the "baby color" of chicks from black breeds worry you. When they are fully mature you will probably find the color all right. White, brown, and even red color may show in young chicks of solid black varieties, but they usually prove sound in color when fully matured after moulting chick feathers.

Comb Deformity.

Q. I have a very fine Orpington cock and he was in good shape and won sev-

RESULTS

A Bull's-Eye

George G. Newell's new book, "A Revolution in Egg Production" tells you how to hit the bull's-eye of *Results*. It shows a method that will

Increase

Your Egg Production

100%

during the molting season and in the winter when you need it most.

It takes nearly all the eggs your hens lay to pay expenses, doesn't it? *Every additional egg you can make them lay is clear profit.* This book is not a jumble of clippings like many on the poultry industry, but an intelligent, well written guide to success. No man or woman has been in the poultry business so long or knows so much about it that they can afford to pass this offer by.

We said you could increase your egg production 100%. It has been done. You can do it.

Don't rack your brain with doubts!

eral ribbons. His comb is curved at
rear and is gradually growing worse.
How or where could I get a brace to
hold his comb straight? Comb is in
good condition and has never been in-
jured.

Claremore, Okla.

J. E.

A. We do not advise doctoring that
comb. It won't affect his breeding par-
ticularly, unless there is a hereditary
tendency to defective comb. Nothing
short of surgical measures and splints
would straighten the comb and that is
considered "faking."

Eggs Don't Hatch.

Q. I have a young cockerel about one
year old mated with twelve hens, seven
of them are three years old. The cock-
erel is just a "pick up." Have set six
sittings of eggs and have not hatched a
chicken. This never has happened to me
before. Two of the hens left the nest
but the rest set fine.

New Holland, Ill.

W. R. C.

A. We have had a large number of
similar inquiries this spring. The cock-
erel may be too young to breed well or
he may be sterile. As he is only a "pick
up" it is possible that you have a "slip"
or young male that someone tried to
caponize and failed to make a good
operation. A "slip" will crow, look like
a fine cockerel and prove unusually at-
tentive to its mates, but will never fertil-
ize an egg. The same is true of males
with undeveloped or diseased testicles.

Never try to breed an immature male
unless forced to do so. We mated a
10 months old cockerel this spring to
four hens, but never got a hatchable egg
out of that pen until the cockerel was
over 12 months old. Had we been able
to get a more mature male of the same
line we should not have attempted to
breed the youngster.

Blood Spots in Eggs.

Q. A good many of our eggs have
blood spots in them so that my custom-
ers are complaining. What causes these
spots and what can I do to remedy the
trouble?

Batavia, Ill.

N. H. V.

A. The blood spots are due to rup-
ture of a small blood vessel in some part
of egg organs, usually near or at ovary.
A small percentage of blood spots can-
not be avoided, but you can test such
eggs out by use of a good electric egg
tester. Sometimes when blood spots are
frequent, the cause may be found in in-
jury from a too heavy and abusive male,
from the hens being chased or fright-
ened or roughly handled and from too
high perches. Overfat hens commonly
show blood spots in their eggs.

Fish Scrap.

Q. Will you kindly advise me where
I can obtain fish scrap. I have tried
unsuccessfully in several places.

Bedford, Ohio.

B. L. J.

A. You will find fish scrap advertised
in our adv. columns.

Inflammation of Egg Organs.

Q. I have a pen of 590 White Leghorn pullets and am having trouble with hens becoming apparently egg bound. They strain considerably while laying and the trouble has become very pronounced during the last two weeks. In some cases blood comes away in considerable quantities. Unless the hen is removed immediately the other hens attack and kill her. I have lost ten during the last four or five weeks and at present have about twenty isolated, five of which were taken out. Have I been feeding too heavily and is the food too rich? The daily average of eggs for January was 185, February 206, March 214 and to this date in April 325. The following has been their daily ration: 15 quarts cracked corn, 15 quarts wheat and 10 quarts oats; mash feed, 21 quarts consisting of $4\frac{1}{2}$ quarts corn meal, $4\frac{1}{2}$ quarts wheat middlings, 3 quarts gluten meal, 3 quarts alfalfa meal, 6 quarts bran, occasionally a quart of linseed meal in this amount. In addition to this, they get from 5 to 10 quarts steamed alfalfa, fed pure, also half a bushel of mangels daily; dry mash before them all the time, being Chicken Chowder, which you, no doubt, are familiar with. They have beef scrap before them all the time, grit, oyster shell, charcoal, etc. The eggs have become noticeably larger during the last month.

Brooklin, Ont.

G. W. H.

A. Hens may possibly be egg bound, but it looks to us more like inflammation of egg organs resulting from the heavy feeding on rich food and too much linseed meal. Would get them on to a diet of mainly oats with a little wheat—omit mash and steamed hay for present and give green range, with ample shade. You may find that a part of the trouble is cannibalism, picking and eating one another, which results from crowding, close confinement and high feeding.

HOW MANY CHICKS DO YOU LOSE?

Statistics Show That Losses Are Needlessly Great

Such statistics as are available show that about 50 per cent. of chicks never attain the pullet age, a percentage of loss which, according to Dr. Hess, a veterinarian of high standing, is needlessly great. Chicks that are regularly given a good tonic, blood builder, internal antiseptic and digestive stimulant will usually live to robust maturity and become strong, laying hens or virile roosters. Leg weakness, gapes and indigestion are the most destructive maladies, and among other preventive and curative medicines Dr. Hess Poultry Pan-a-ce-a has received general commendation. It has had the approval of farmers and poultrymen throughout the country for over 22 years, and is sold under an agreement whereby the dealer will refund your money if the preparation fails to do all that is claimed for it. Any means of decreasing chick losses and increasing hen productivity will surely interest every farmer who is trying to keep up his profits in this line.

Dr. Hess Poultry Pan-a-ce-a can be used advantageously for poultry of all ages. One of the largest uses is, of course, for egg production. Poultrymen are very generally agreed that Pan-a-ce-a has a beneficial action on the egg organs. It tones up and enlivens these organs and puts hens in egg-laying condition. It will be understood that Pan-a-ce-a is not a stimulant, but a true tonic whose action is of a permanent nature. When moulting time comes in the fall Pan-a-ce-a is valuable to hurry along the moult and get hens started promptly to laying again.—Adv.

THE WHITE HOUDAN.

The above is the title of very neat little booklet on the White Houdan fowl, published by Eugene A. Smith, Vauxhall, N. J., who is an enthusiastic breeder of this variety. It is sent free on application.—Adv.

Good Things for Everybody

Helen T. Woods
Editor

I said it in the meadow path:
I say it on the mountain stairs—
The best things any mortal hath
Are those which every mortal shares.
—Lucy Larcom.

IN JUNE everyone is an optimist. Nature has spread before us her most tempting array. The grass is green, the trees in leaf, the sky blue, the sun warm and the summer's blossoms at their greatest beauty. Bird concerts are daily treats in orchard and woodland and the frog opera season is now on with its strange delightful music trilling thru the night. As the sun sinks behind the west, the last twitter of sleepy birds dies away and the hush of early evening descends upon the earth. Suddenly from somewhere comes the first trilling notes of the frog. That there is a leader in each stream, bog or pond from which issue these voices of the night, no one who has listened to their weird and unmatched concerts can doubt. The air is still with not a sound to be heard. The hush of evening is upon us when the first note from some mysterious throat breaks the stillness. The baton has been raised and from a thousand jangling strings bursts forth the response. After the first wild tumult dies away, there is rendered a dreamy lullaby, low pitched and beautiful, than which there could be no finer sleepy song. Now and then comes the deep basso "Ah-h-h-rum-m-m," a soft deep guttural, mingling in wonderful choral effect with the pleasing va-

riety of frog songs and voices. The evening wears away and sleep is insistent with the pleasant accompaniment of swaying branches, fragrance of flowers and the harmonious notes of the invisible frog choir. The joy of the month of June permeates the hearts of all and awakens in them a renewed belief in man and love of Nature.

Ancestor hunting in some individuals develops into a sort of mania and to un-earth illustrious forebears, the one reason for existence. Of course it is a fine thing to have been well born, but what constitutes being well born is a disputed question. Personally, we believe that no better qualification for being well born can be suggested than that of being born of healthy, industrious, intelligent, honest parents.

Not long ago we read in a foreign publication, which is being edited by an American for the benefit of the English and French hospitals, an interesting estimate of the number of ancestors in five centuries necessary for one individual. The figures were rather appalling and whenever we hear "large talk" in reference to some one illustrious ancestor, we are led to wonder what manner of timber constituted the million or more ancestors not spoken of.

Every few days we read in the papers that such and such a person is directly descended from such and such a noble or illustrious family. Pursuing the ancestor hunt back to William the Con-

queror is a common habit of wealthy Americans. On giving thought to the subject we are led to voice the opinion that personally we would hope to have been descended from some of the common folk who suffered for their cause, were honest workers and without the stain of intrigue, pillage and murder upon their horny hands of toil.

There is, however, sufficient cause for fervent thankfulness in having been born of healthy, intelligent, industrious and honest ancestors and in view of the multitude constituting one individual's ancestry, it is safe to say that most humans have had one or more ancestors answering that description. If there be any who cannot in his own mind remember such an ancestor—let him not despair. For after all is said and done there is something altogether more worthy and inspiring than having illustrious ancestors and that is being one yourself. Any of us can be a good ancestor if we want to be to the extent of working conscientiously toward that end. Following a right order of such things, each generation should prove itself a little more useful and advanced in right living than the one preceding it. Therefore it follows that even tho you may claim direct descent from the most illustrious and noble names in the history of the human race, if you have not equalled your illustrious ancestor, or gone him one better, you are an unworthy descendant.

If on an ancestor hunt, bear in mind that there are human qualities more worthy than bestowed or inherited titles or wealth and which are acquirable by any one who will persevere in their cultivation.

* * *

Ethelbert Nevin, the American composer, once wrote a friend: "Last night in Rochester I had a perfect ovation and I don't know when I have played so well. In one of my numbers the gas in the hall went out. I heard quite a little rustle of confusion in the audience which threatened to become panic, but I kept my self-possession and finished my work in total darkness. When I was thru, the people simply were wild in their enthusiasm. To keep them quiet until the lights were arranged, I again played that composition (meaning Narcissus) and it was so still in the hall, I felt the audi-

ence could almost hear my heart beat."

How many are keeping on with the melody in the darkness until the lights are arranged, thus preventing a panic in the audience meanwhile? No finer inspiration is given to humans than that of the artist who can keep his heart in his work, his fingers on the keys and his mind above the blackness that surrounds him when the lights go out. In the present day crisis of tumbling civilization, with the Fear Mongers using every effort to incite alarm among the people and terrorize them into a state of panic, it becomes a crucial moment when our fingers should be doing their best work at the keys and our minds keen to see above and beyond the blackness surrounding us.

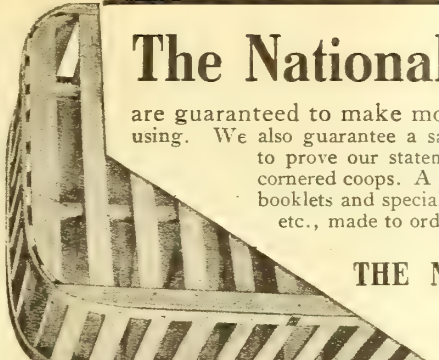

* * *

The Baltimore Orioles are again constructing their marvelously woven and picturesquely suspended summer homes in the century old apple trees in our orchard. The first pair made their appearance on May tenth. I was washing the breakfast dishes when I heard the old sweet note, bringing back with it a flood of memories of summers gone. On the scraggly limb of a gnarled old apple tree then bare of foliage, perched lightly on topmost bough, he poured forth a melody of returning summer, the gold of his coat glistening in the morning sun. As songsters the orioles bring joy to the most downcast heart. His is a note of optimism guaranteed to give flight to the darkest and most deep dyed glooms. As architects, they outclass all competitors. Artistic, graceful, airy, swinging habitations—mayhap more of us could strike such a note as theirs could we as skillfully construct and occupy a home in the tree tops with the apple blossoms bursting and scattering their sweet fragrance over the earth. When I came back the dishes had dried from long waiting and the water was cold, but I had welcomed back my old friends, the orioles, to the orchard and their songs of returning summer are with me yet.

* * *

Let every housekeeper declare war on the fly, the mouse and the rat. Here are subjects for real earnest work and warfare. More sickness and waste are caused by these pests than any other combination of causes—except human warfare. It may take many decades to free mankind of his belief in and desire for wholesale murder of his kind, but in the meantime let the home makers of the nation voice their disapproval of war or preparation for it and devote their annihilating energies to the destruction of those pests which prey upon the progress and sanitary living of the human race. If we could have access to even a small part of the funds and scientific knowledge which are being applied to the cause of war and the destruction of man, we could rid the planet of mice, rats, flies, mosquitoes and countless other pests within a few years. But working along the line of individual endeavor, with only such time, ability and funds as each of us can devote to the cause, a great deal can be done, and thousands of dollars worth of food stuffs and an inestimable number of human lives saved.

Flies are the main cause of the spread of typhoid fever, cholera infantum and of those diseases known as summer complaints. There are more than half a million cases of typhoid in this country annually and fifty thousand or more deaths

TOM Barron's Winners

All Egg Contests Prove Them

World's Greatest Layers

Are Still at MORRIS FARM
R. 4 - Bridgeport, Conn.

I have the Most Profitable Flock of Poultry in America, and you cannot afford to be without my blood.

Remember, you take my word for nothing. I state only official records made at National Laying Contests.

In Wyandottes—

\$8.69 worth of Eggs by BARON-ESS V., the 282-egg hen, at North American Contest, 1913-14. Four others laid 274, 271, 258 and 252 eggs. The five laid 1337 eggs, an average of 267, or \$8.21 per hen.

I have a flock of 27 Hens that gave net profit per hen of \$4.67. These are the three Contest Pens I bought of Barron, and which he had at Pennsylvania, Connecticut and Missouri. All my Wyandottes are bred from these.

In Leghorns—

I am breeding the Highest Pedigree Cockerels in the World, out of the 288-Hen, winner at Newport, Eng. This affords new Winning blood for the Barron breeder. Others, 284, 256, 255, etc.

In Buff Rocks—

280, 265, 263, 240, etc. I guarantee all contest birds.

All Breeders tested by Storr's College. Free of white diarrhoea.

SPECIAL REDUCTION

May and June on pedigree chicks, also on eggs. Take advantage of this by ordering early. Half grown stock half price July and August.

MORRIS FARM

R. 4 Bridgeport, Conn.

from typhoid and sixty thousand or more deaths from cholera infantum. Practically all of these could be prevented if the fly nuisance was done away with. And yet there are crafty politicians crying for more men, ammunition and arms that they may be able to conquer more worlds!

Make war on the early fly. June is the last call to battle in the successful fly annihilation. After June her offspring have so reinforced the early fly that the battle is against tremendous odds and even by putting forth our most up-to-date preparedness campaigns, we cannot hope to put her and her long line of descendants to rout. Now is the time to kill a million flies at a stroke by killing the mother of the fly family before she deposits her eggs in some filthy corner of the farm yard and her prolific descendants begin their deadly work.

Mice and rats, like flies, are not believers in or practitioners of race suicide. They believe in multiplying rapidly and over-running the earth. A good cat or well trained dog will assist greatly in the fight to drive them from the face of the earth. Well baited traps, not once or twice a year, but whenever and wherever there is evidence of a mouse or rat having been, will render great assistance to the home keeper bent upon their extermination. Keep food covered and out of their way. Leave no scraps about to tempt them into your domain. And keep up the fight!

Don't forget about the noisome mosquito, which, like the poor, we have always with us. Leave no stagnant water about to assist in their propagation. A quart or two of stale water in discarded tomato cans in the dump will greatly assist the mother mosquito to give birth to a million or more of her annoying and many times deadly offspring. The fight is on, but it is a clean, unlifting battle to rid the world of these death-dealing pests and in time even the war lords will be among our recruits.

OLD FASHIONED GRAHAM BREAD.

By S. D.

Soften $\frac{1}{2}$ yeast cake in $\frac{1}{2}$ cup warm water. Melt 2 tablespoonfuls butter in 1 cup scalded and cooled milk, and 1 teaspoonful salt, $\frac{1}{2}$ cup molasses, yeast in the water, and stir in 2½ cups graham flour and 1½ cups white bread flour, mixing very thoroly. The dough is not firm enough to knead. Cover and let stand over night. In the morning cut the dough thru and thru with a knife, turning it over and over, meanwhile turning it into one large buttered bread pan or two small ones. Smooth with a knife and let stand to become nearly doubled in bulk. Bake about one hour.

DARK FRUIT CAKE.

By S. D.

Frances — Half cup butter, $\frac{3}{4}$ cup brown sugar, $\frac{3}{4}$ cup raisins, seeded and cut into pieces, $\frac{3}{4}$ cup currants, $\frac{1}{2}$ cup citron thinly sliced and cut in strips, $\frac{1}{2}$ cup molasses, 2 eggs, $\frac{1}{2}$ cup milk, 2 cups pastry flour, $\frac{1}{2}$ teaspoon soda, 1 teaspoon cinnamon, $\frac{1}{2}$ teaspoon allspice, $\frac{1}{2}$ teaspoon mace, $\frac{1}{4}$ teaspoon clove, $\frac{1}{2}$ teaspoon lemon extract. Bake in deep cake pans 1¼ hours, moderate oven.

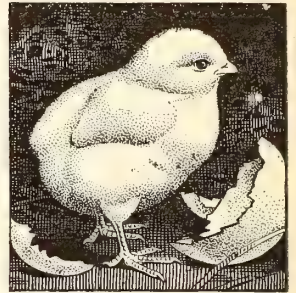

LIGHT FRUIT CAKE.

By S. D.

One-half scant cup butter, one cup sugar, one-half cup milk, 1½ cups flour, three teaspoons baking powder, whites

of four eggs, one-half teaspoon vanilla, one-half cup raisins, seeded and cut in pieces, two ounces citron thinly sliced and cut in strips and one-third cup walnut meats cut into pieces. In making mixture reserve one tablespoonful of flour to use for dredging fruit. Measure dry ingredients and sift together. Cream butter and sugar; add egg whites, beaten light, then milk. Flavor and then flour with baking powder sifted in. Dredge fruit and add.

Baby Chicks

At reduced prices for May of four varieties from free range utility stock.

MONTHLY PRIZE CONTEST DEPARTMENT

The American Poultry Journal offers the following prizes monthly for the two best articles received on or before the fifteenth day of each month: For the best article, a prize of Three (\$3.00) Dollars will be awarded; for the second best article, a prize of Two (\$2.00) Dollars will be given. Articles intended for the Contest must be written on one side of the paper only and should not contain less than 1,000 nor more than 2,000 words. The articles may be written on any subject pertaining to poultry culture. We reserve the right to retain all articles submitted and to publish such as we deem worthy of space. Send all articles plainly marked to Contest Editor, American Poultry Journal, Lock Box 4, Silver Lake, Mass.

SUCCESSFUL METHOD OF RAISING CHICKS.

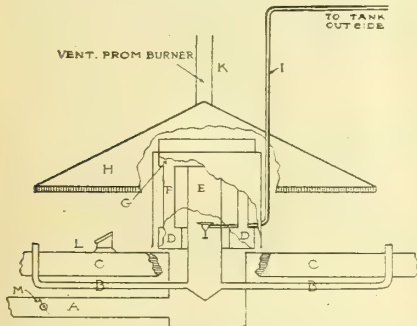

First Prize Article in American Poultry Journal's Monthly Contest.

By ALVIN J. MYERS, Blue Island, Ill.

A METHOD of brooding and raising chicks that has brought remarkable results wherever tried will probably be of interest to poultry keepers at this time. From my experience and observation I am inclined to believe that a large part of the bowel trouble in chicks is the result of wrong brooding and feeding, and easily avoidable.

Not being able to find a brooder that came up to my expectations, I constructed one after the plan herein given and it has proved entirely satisfactory. The burner is located in a center drum, which leads to larger top drum, which in turn is connected with a bottom ring with eight small tubes. The bottom ring is connected with the chimney or vent flue. This heater is surrounded by a casing, with a large hood over all. The bottom of the burner drum is connected with four pipes under the floor which have inlets in the four corners of the room one inch above the floor, covered with one-half inch mesh wire.

These four pipes insure forced ventilation at all times, carrying off all foul air to the outside. The heater casing is connected with a pipe under the floor which has an outside inlet. This insures fresh heated air at all times. The fresh air pipe has a damper to regulate the amount of air according to the weather. (See sketch for detail.)

1—Showing cut-away section of brooder heater. (See article "Successful Method of Raising Chicks"). A—Fresh air intake. B-B—Foul air vents. C-C—Joist. D-D—Lower down draft ring. E—Burner tube. F—Drum connecting tube. G—Upper heat ring. H—Deflector. I—Fuel pipe. K—Vent flue. L—Thermometer. M—Damper.

The burner uses either gas or gasoline, and has no regulator. After once being regulated it requires no further attention. The flame is regulated so as to give a temperature of one hundred degrees, one foot from the casing, with the bulb one inch above the floor. I believe the forced ventilation and fresh

heated air features to be almost ideal, because the chicks have a steady even temperature of fresh heated air, with no foul air.

Most of the colony brooders could have both of the above changes made at a small expense. Gas or gasoline will cost about twenty-five percent more than coal, but when you consider the necessary time to look after a coal brooder, it will be found that the gas or gasoline heater is the cheaper.

The brooder house floor is covered with one inch of sand, which is sprinkled with a weak solution of Lysol and renewed three times a week.

After the hatch is over the chicks are placed in the brooder, care being used not to chill them. They are given nothing to eat for thirty-six hours, but are allowed sour milk. The sour milk is put in a fountain with a cover which has three-fourths inch holes, this receptacle preventing the chicks from getting into it or getting wet.

A one-inch mesh poultry netting ring is placed around, four feet from the heater casing, for the first three days. Until the chicks learn where the heat is, they are liable to stray into corners and become chilled. Once a chick is chilled or overheated it is about impossible to make a healthy chick of him. I have tried it several times by marking the chicks and never was able to raise one that would pay for the food consumed. I never try to raise weak or sickly chicks. When the chicks are thirty-six hours old, I cull them and destroy all weaklings, thereby giving the good ones a better chance.

For the first feeding, I give rolled

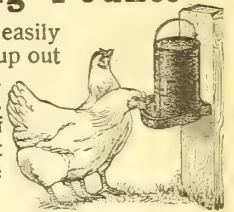

oats and hard boiled infertile eggs, run thru a food chopper. It is mixed fresh, just before feeding and, and placed on shallow pans. I keep food constantly before them. When bringing a fresh supply, if anything is left of last feeding it is removed. A great many people object to keeping the food always before the chicks, saying they will overeat and develop bowel trouble, but my ex-

perience is just the opposite. When chicks are fed only at certain periods they rush wildly for the food and the most vigorous eat more than they should, while the weaker ones are pushed away and not eat enough. While when food is always before them they all get enough to eat and the growth is steady and uniform. I have had no cases of bowel trouble in chicks since adopting it. My records for the past five years are as follows, counting the chicks at the end of thirty-six hours, I have raised the following percentages of chicks: 1911, 80% 1912, 94%; 1913, 95½%, 1914, 92%; 1915, 98%. Hens were used to hatch and brood in 1911.

The rolled oats and infertile egg mixture is used for one week, with sour milk to drink. Commercial chick food is gradually substituted for the egg mixture during the second week, but no sudden change of food is made. A mash, composed of wheat bran, 60%, and corn meal, 40%, is kept in chick size hoppers (always open) after the second week. A little beef scrap is added later and gradually increased until the fourth week it is one-third beef scrap. Grit and charcoal are kept before them all the time, and sprouted oats are fed at nine and two o'clock daily during the third week, gradually increasing until the fourth week, when they are fed all the sprouted oats they will consume in one-half hour.

After six weeks, some whole grains and the usual cracked grains are fed, the ration being much the same as for old fowls and the beef scrap is again reduced to fifteen percent.

The amount of time required to care for young chicks by this method is comparatively small. I believe that one man could care for from six to eight thousand chicks by this method and do his work well. Most colony brooders could be changed after this style and thereby give the forced ventilation and heated fresh air.

HOME-MADE FIRELESS BROODER.

Being Second Prize Article in American Poultry Journal's Monthly Prize Contest.

By ROBERT S. KETCHAM, Boonville, Ind.

IT IS not necessary to be a carpenter to construct a good useable fireless brooder. To get the material for construction will not require much capital, but if instructions are followed the results will be good.

Get a common flour barrel or apple barrel and knock out both ends. Saw the barrel off even, about eight or ten inches from end, which finishes the frame work for two fireless brooders.

Nail each stave firmly to the hoops to prevent it from falling to pieces when it shrinks. Cut the door thru one of the widest staves, using the largest hoop for the threshold, and turn the "tub" small end up. Bore one-half inch hole in each stave, middle way between the hoops for ventilation, as later on you will find the necessity of having as near perfect ventilation as it is possible to obtain.

Get a square yard of woolen goods, cotton may be used, but woolen is much preferred. Spread the material out flat and set the tub on it, large end down, then cut the cloth circular shape six

inches larger all around than the tub. Next make a wire hoop that will fit the tub four or five inches from the large end. Draw the cloth over the large hoop so it will hang down five inches all around and sag down inside the hoop. The sag distance to rest on the backs of the chicks, and the hanging curtain around the inside of the tub should be trimmed even with the bottom.

The hover cloth must be caught to the wire hoop every three or four inches, using a coarse needle and thread. Tie tightly and gather the cloth evenly as you proceed. Set the tub large end down and hang the hover by means of three or four wire "S" hooks under the hoop and over the top of the tub. Cut a slit in the hover cloth at the door and make a slitted flap to tack over the outside of the door.

Make a layer of wool, cotton, feathers or any fine hair or moss, or other non-conductor of heat and cold and fill in over the sagging part of the hover. This will be of great assistance in keeping in the heat generated by the chicks' bodies. In cold weather, there should be several layers of this material, covering carefully over the top of the cloth.

A cover for the brooder should be made by stretching a piece of burlap over a large hoop and fastening it securely. This is a much better plan than tacking the burlap over the top of the brooder.

Each morning the brooder should be moved to a fresh spot that no accumulation of droppings or decayed food may contaminate the chicks. At first, this brooder will very comfortably take care of from twenty-five to forty chicks, but as they develop they must have larger quarters. During the first few weeks, this brooder provides a comfortably warm and sanitary shelter for them.

I have heard the complaint made that it was difficult to get chicks so brooded to go in and out at the door at first and I agree that it requires time and patience to train them "the ins and outs" of their first home. This difficulty is to be met with in any kind of artificial brooding. I have used these brooders successfully for a number of years and I prefer them to the manufactured ones. They are much cheaper, safer and more sanitary, and last but not least, they are, in my estimation, the most healthful of brooders. The time required in caring for a brooder of this kind is comparatively small and the busy back-lotter may operate a number of them, moving them frequently to clean patches of earth and realize a good profit in poultry keeping at small expense for equipment. A trial will convince the beginner of their usefulness and suitability to his venture, and having tried one, he will in all probability continue their use.

You are practically as early this year hatching chicks in June as any other year in May. On best advices all over the country, east of the Mississippi, we believe there are not more than one-half to two-thirds of the chicks hatched as in former years. There was not over 25% of the chicks hatched this year in February and March as in former years, on account of the extreme cold weather. April hatches also were way behind. Chicks are bound to be in demand very late this season, and if you want winter layers, by all means buy W. Leghorns, the only breed that will mature before the cold weather. We shall hatch

Recent Inventions for Poultrymen

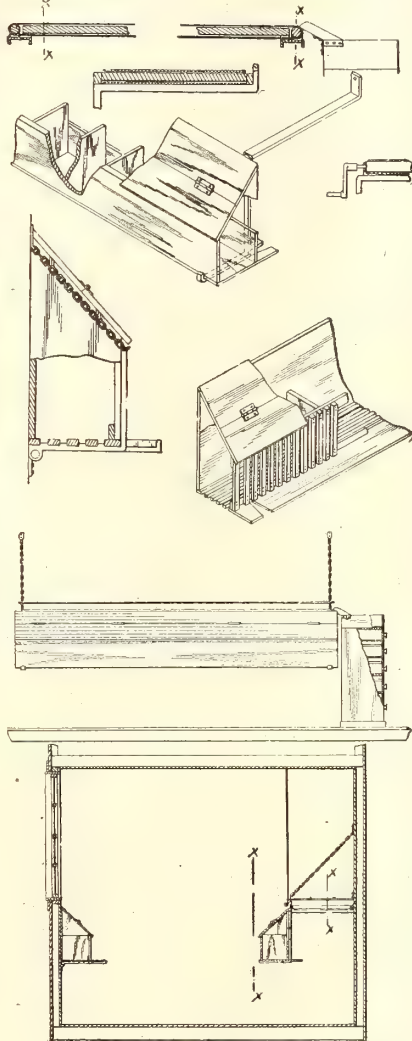

By Lester L. Sargent, Patent Attorney, Washington, D.C.

BERTHOLD A. LANGE, St. Louis, Missouri, is the inventor of the crate for shipping eggs shown in the accompanying illustration. The edges of the frames are correspondingly grooved so corresponding edges of each frame engage in the grooved edges of the frame below or above, as the crate may be arranged. Aligned openings are provided to receive and hold the eggs between the respective sections. The frames are disposed in superposed relation, and for shipping are placed within an open paneled skeleton container rather than making the container of completed box construction. By this method an im-

A crate for shipping eggs, patented April 18, 1916, by Berthold A. Lange, St. Louis, Mo. Patent No. 1,179,845.

portant saving of material is achieved, while at the same time the trays are boxed in a strong package of comparatively light weight. In filling and emptying the crate one frame is lifted off

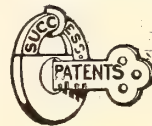

A sanitary house, patented May 2, 1916, by Niels M. Anderson, Dassel, Minnesota. Patent No. 1,181,204.

while the eggs are placed in or removed from the companion frame beneath. The patent is No. 1,179,845.

Niels M. Anderson, Dassel, Minnesota, has devised a sanitary chicken house. The nest boxes are arranged so that all of the nest except the bottom board may be lifted off to permit of cleaning. The house is provided with a fattening coop, having bottom slats that can be withdrawn one at a time for cleaning. The roost is arranged over a dropping board over which an endless apron is mounted. A hand crank affixed to one of the drums over which the apron is mounted makes it possible to quickly clean the apron by turning it past an inclined scraper at one end. In actual usage sand or sawdust is placed on the upper run of the dropping board. The patent is No. 1,181,204.

A poultry feeder and exerciser of the type operated by a bait bar has been invented by George K. Gillette, Pembroke, Massachusetts, the patent rights having been acquired by the Watson Manufacturing Company, Lancaster, Pennsylvania. The bait bar is arranged horizontally, and the valve that releases the grain from the feeder is opened by the downward pecking of the poultry on the bar. The rod holding the bait bar is suspended from a spiral spring contained within a tube extending part way down thru the grain receptacle. A slotted valve tube, open at its bottom end is telescopically arranged so that the slotted

portions will be uncovered and grain released and scattered when the poultry peck at the bait bar. The patent is No. 1,180,640.

A poultry feeder and exerciser, patented April 25, 1916, by George K. Gillette, Pembroke, Mass. Patent No. 1,180,640.

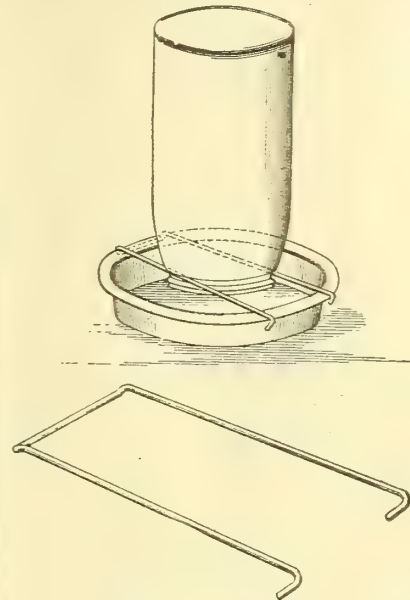

A new poultry coop or crate for display or exhibition purposes, which permits the care of a large number of fowls in a comparatively small space is the subject of a patent issued to the Union Steel Screen Company, Albion, Michigan, as assignees of George E. Dean, of the same city. The structure is also designed

Poultry coop or crate, patented April 18, 1916, by G. E. Dean, Albion, Mich. Patent No. 1,179,703.

as a battery feeder for milk fed chickens. The coop can be knocked down for transportation, as the various panels and frame members are removably mounted. The patent is No. 1,179,703.

A poultry fountain may be improvised from an inverted jar and a pan by means of a wire yoke approximately U-shaped in plan, having its opposite end portions bent to engage the rim of the pan, while the neck of the jar is supported between the yoke. The device is the invention of Philip A. Tessier, Irvington, N. J. Patent No. 1,181,045.

Poultry fountain, patented April 25, 1916, by P. A. Tessier, Irvington, N. J. Patent No. 1,181,045.

Keep Them in Condition!

To get a maximum egg yield next fall and winter your birds must be kept in the pink of condition from hatching to maturity. It has been proven that the feeding of Mustard to poultry promotes an increased egg production, and is also permanent, beneficial to their health, vigor and stamina. French's Poultry Mustard is the original Poultry Mustard in America, pure and of great strength, hence only a small quantity is required for each fowl. The best results are obtained from its continuous use. Prepare your birds now for more eggs next winter. Booklet free.

**CHICK TIME HINTS AND HELPS FOR BEGINNERS.**

Gleaned from "Poultry," England.—Color of Day-Old Chicks.—Nest-Boxes for Sitters.—Selecting Brood Hens—Period of Incubation—Coops for Hens with Chicks.

Sellers of eggs for hatching, and of day-old chickens, are often accused of having sent to the purchaser birds or eggs not of the breed or variety ordered.

This is the result of a lack of knowledge on the part of the purchaser of the appearance of newly-born chickens.

There is a great difference between the color of a chicken's fluff and legs and its adult plumage.

To take the self-colored varieties first: All chickens of black fowls, no matter of what variety, are black and white, or black and cream-like tinge.

If a black chicken is to develop into a bird of a fine metallic color it should not be entirely black at birth.

Very often there is less black than white about a chicken from black-plumaged parents, and if there is a good amount of white on the breast and about the head the adult feathering should be satisfactory.

But white is always found in the flight feathers of chickens of black fowls, and frequently on the neck and on the under fluff.

In the white varieties that have yellow shanks the chickens come of various degrees of creaminess or faint lemon tint; but if a white chicken from a white-plumaged and legged fowl has bluish shanks that tinge never clears.

Never discard a White Rock chicken that is of a blue-gray tinge of fluff. Such a bird invariably gives less trouble with

sappiness—that faint primrose tone that almost all white-plumaged youngsters show when growing.

Of course, with white chickens the heavier the variety they are, the more "chubby" or "cobby" they look at birth.

The chickens of buff fowls with white legs come with either a yellow or buff cast, and have reddish-yellow legs, which gradually turn to the white color required.

And if such chickens have a little black or white in flight feathers do not be alarmed. They are frequently replaced by feathers of the correct color.

The chicken of barred fowls is not a bird of marking. It has often black on its back and is of a dull drab and white or creamy mixture, not unlike that of a chicken from black fowls. And usually the color or marble grey is much darker in the pullets than the cockerels.

When the barring appears it generally comes first on the shoulders and then from the throat downwards.

The Barred Rock chicken, too, has a grey patch a little larger than a sixpence on its head—that is a chicken that will be well marked when fully "furnished" or feathered.

Chickens of Columbian Wyandottes and Light Brahmas and other fowls that are white with black markings are frequently pale yellow throat, but they often have a small black spot on top of the head and sometimes a little grey on the back.

To distinguish the chickens of fowls known as the black red kinds is a rather difficult matter to the novice, since they are somewhat alike in appearance.

The varieties that come under the heading of black reds—in which the hens are mostly brown and the cocks red and black—are the partridges of all breeds, Black Red Modern and Old English Game, Brown Leghorns, and Indian Game.

Chickens of such varieties are very beautiful. There is a band or stripe of rich brown from the junction of the skull and beak, right over the head and back to the tail, with fainter and less broad stripes on either side, and the other plumage has the appearance of being lightish brown or fawn.

So long as the color under the foot is yellow it is better for chickens of yellow-legged varieties not to be born with yellow shanks.

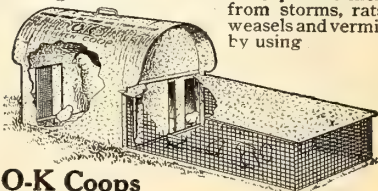

If this happens it is almost always the case that the color turns pale. Willow or slightly green or dark legs are what are required at first.

But, on the other hand, if chickens from willow-legged birds come with yellow shanks it is a sign that all will be well when the bird reaches an adult stage.

The legs of Black Orpington chickens

BARRED PLYMOUTH ROCKS

Winners in four Missouri Laying Contests. Making better record in last Missouri Contest than the famous English strains did in either Missouri or Storrs Contests. Outlaid all Rocks in last North American Contest. Parks customer led entire Storrs Contest all winter. Made best winter month record in Missouri Contest (134 eggs). After all, its the winter laying that counts. Continuous laying records up to 148 eggs. Individual records up to 290 eggs. Flock averages up to 242 eggs. They are bred with an object of bringing the Egg Basket and the Standard of Perfection into closer relationship.

Eggs, Chicks and Choice Breeders at Half Price After June 1st. Eggs, chicks and surplus stock circulars free. Large catalog, dime.

SQUAB BOOK FREE

for 1916, telling how a Mich. hired man now works for himself breeding PR squabs and selling for \$3 doz., how an Ind. man sold 4652 PR squabs for \$1265 in 1915 and cured himself of desire to leave the farm, how a S. C. man ships PR squabs 125 miles to city hotel by parcel post at \$4.25 doz., how another earned one thousand dollars with PR stock from start with only one pair, how a Texas judge bred 8 pigeons until they amounted to a flock of 164 in one year, how a Vermonter bred 25 pairs to 800 pairs in two years. You can do the same. More money-making experiences. **Write today for this big free book.** How to get six dollars a dozen, how to start small and grow big. We ship breeders everywhere, safe delivery guaranteed. Read how one of our customers gets as high as \$8 a dozen for squabs in Pittsburgh and makes a net profit of ninety dollars a month. Note his selling methods. Reading matter which is alive with selling as well as breeding ideas. Squabs well sold are easily

raised. Many successful women customers. Read of their methods and the results they accomplish. For prices and full particulars see our free book, "How to Make Money with Squabs." Write for it today.

Tells all you want to know about Rabbits. Our book: "The Rabbit: How to Select, Breed and Manage the Rabbit and Belgian Hare for Pleasure or Profit," by breeders of long experience with rabbits. Sixth edition, nicely illustrated, enlarged and much improved. Price 25 cents with sample copy of the AMERICAN POULTRY ADVOCATE containing Belgian Hare Department Poultry Advocate Dept. 252, Syracuse, N.Y.

The Queen Gets The Chicks

Producing large hatches of strong, lively chicks, able to live through the uncertain period of the first few weeks and develop into vigorous fowls it pays to feed and raise. Many farm folks tell us that the Queen is exceptional in this respect. A perfect Regulator and the proper degree of moisture required are two of the advantages of the Queen. Not a cheap incubator, but cheap in the long run.

QUEEN INCUBATOR CO., 105 Bryan Ave., Lincoln, Nebr.

Natural Hen Incubator \$3

No freight to pay. Actual hen controls everything. No lamp, no costly mistakes. Best hatcher in the world. Over 750,000 in use.

J. M. Perla, Ill., writes: "It is the best thing I ever saw for hatching chicks."

Another: "I got 507 chicks from 540 untested eggs."

Thousands of other testimonials. Agents Wanted.

To reach the million mark in 1916 we will send you a Special Introductory Offer with our Free Catalog.

Natural Hen Incubator Co., Sta. H, Dept. 4, Los Angeles, Cal.

MAKE HENS LAY

By feeding raw bone. Its egg-producing value is four times that of grain. Eggs more fertile, chicks more vigorous, broilers earlier, fowls heavier, profits larger.

F. W. Mann Co., Box 56, Milford, Mass.

are, too, not black at birth: they are somewhat on the mottled side—black at the hocks and, lower, pinky-yellow.

The chickens of mottled fowls, such as Anconas and Houdans, are very similar in appearance—black and white; but, of course, the latter have the curious "lump" on the head, and the fifth toe.

There is little difference between the appearance of Rhode Island Red and Buff Orpington chickens; but generally the former show more white and have a patch of lightish brown on their backs.

It is quite easy to distinguish Salmon Faverolles chickens, since from the first they have feathered legs and the muffling at the throat. They are generally creamy or white, or with a tinge grey in flights.

While the first body covering of a chicken may or may not be called plumage, it is shed and replaced as if it were such. The method of moulting, however, is peculiar to the downy coat.

The chick, when it comes from the shell, has pin feathers for flights. In two or three days it develops pin feathers that will become main tail feathers. The down grows longer, and shafts develop on certain areas of the body.

Within a few days these shafts burst open, allowing the web of the feather to spread; but the down often clings to the tip of the opened feather. The ragged appearance to be noticed on two or three weeks old chickens is due to this clinging of the down tips.

The first body feathers to appear are those at the throat, just above the crop. From this point a line of feathers extends down each side of the crop and breast. When this line begins to show a tuft appears on each thigh and a line down the spine.

The feathered areas increase in size as the bird grows older, so that at the age of four or five weeks they have grown together, and the healthy chicken looks to be well feathered.

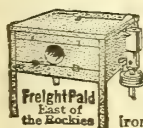

The wings and back are covered, the feathers growing well up the back of the head, and the breast is protected, except a small space over the crop.

The rear of the body is covered by the flights, the feathers on the thighs, and a tuft near the rear of the keel bone. The legs are encircled by a ring of feathers just above the shank. In short, the chicken's body is protected by the feathers at every vital point.

There is generally a new growth of feathers at eight weeks and again at thirteen weeks. At these times the body is covered with pin feathers, but this does not prove that these feathers replace others which are shed.

From the age of thirteen weeks to just about maturity (five to seven months) chickens do not cast their feathers. They then shed all their feathers, and assume a more mature dress, the pullets getting their full plumage.

Should the hen be set outside, the front of the box must be covered with a sack, as no hen will sit well if not fairly warm; and the bottom of the coop or box should be of stout half-inch mesh wire to keep out rats. A sheltered spot should be chosen.

Eggs. Winners at World's Fair, Chicago, and Springfield. Catalogue free.

S. N. TREMPER, Lock Box 731, Sandwich, Ill.

Each hen must have a box to herself. This box should be a foot wide and sixteen inches deep and high.

The box should have a hinged door opening from about two inches from the top right to the bottom, and ventilation holes should be bored in the two inches above the door.

The top, back, and sides of the sitting-box should be solid. And besides the holes in the door, one or two may be bored in each side just under the top if the box is a separate one.

Thoroughly whitewash the interior of the box, using a pump if necessary to get the liquid into the corners; and use the wash while it is hot.

The best place in which to keep sitting hens is in a quiet, darkened, warm, well-ventilated room, barn, or shed free from draughts.

Test all eggs on the fourteenth day, and turn out all infertiles.

By doing this, where three or four or more hens are set at the same time, it will in all probability enable one hen to be set free by all the fertiles being equally divided into clutches.

A good broody hen that has sat a fortnight will readily go another three weeks, so that the hen or hens left over after the testing may be given a fresh lot of eggs.

The best kind of hen to select for sitting is one of good size and quiet disposition—one that will allow herself to be handled without getting too excited.

If she is short-legged, so much the better, as such a hen is generally less liable to scamp during her period of strict confinement.

The Sussex, the Wyandotte, the Orpington, and the Plymouth Rock are good sitters and careful mothers.

The Dorking, owing to its extra claw, is not to be recommended for sitting purposes. It very often on this account tramples the chickens to death, both in the nest and in the run.

Feather-legged fowls, such as the Brahma, Cochins, and Langshans, are often clumsy, and are apt to smother or hang the chickens while hatching.

They do, however, generally become broody early, and they sit extremely well.

A splendid fowl for broodiness is the Silkie-Wyandotte. This means a Silkie cock on White Wyandotte hens.

HERE IT IS FOR \$4.00

A GREAT BIG HAND GRINDER

that will save its cost several times a year and will furnish one to two bushels per hour of fresh ground corn, oats, peas, dry bone, oyster shells, nut shells, dry stale bread, etc., for poultry feed, or will grind table meal for family use.

A child can operate it. Thousands sold annually. Shipping weight 40 lbs. We also include a full line of Power Feed Mills, Samson Wind Mills, Gasoline Engines, Hardware Specialties. Ask for Catalogs, stating line in which you are interested.

UNITED STATES POST OFFICE

Lanark, Carroll Co., Ill.
March 7, 1916.

Dear Mr. Bean:

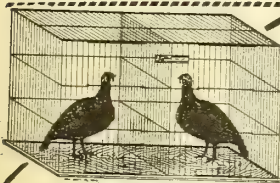

Last season we bought one of your \$10 Single Comb settings and had good success. We raised two cockerels and three pullets. One of the cockerels was only fair. The other scored 94 and the pullets 96, 94½ and 93½ by Judge Chas. McClave at our recent show. I doubt if this 96-point pullet has an equal in the U. S.

I am inclosing my check, etc.

COLUMBIAN WYANDOTTES

Hatching Eggs—Special mating, \$10.00 per 15; five yards, \$5.00 per 15, \$9.00 per 30. Write wants. Address

Ralph Woodward, Box 200, Grafton, Mass. Pres. National Columbian Wyandotte Club.

Pullets of this cross are careful and reliable sitters, and, of course, are larger than pure Silkies.

With the cross-bred hens put a Silkie and a White Wyandotte male in alternate years. This will give the necessary qualities—soft fluffy plumage, a frequent desire to sit, and good size.

Hatch the chicks for a good "broody" strain about early April. The bird should then lay in November and be ready for incubating early broods.

To induce broodiness, force the hen to complete her clutch of eggs quickly.

Do not excite the hen by disturbing her too often while the chickens are hatching—that is, about the twenty-first day.

It is, however, advisable to remove the broken shells and all dry and fluffed-out chickens twice or thrice during the day.

If you have an incubator running, place the dry chicken in the drying box.

(Continued on Page 896)

STATEMENT OF THE OWNERSHIP, MANAGEMENT, CIRCULATION, ETC., REQUIRED BY THE ACT OF CONGRESS OF AUGUST 24, 1912,

OF AMERICAN POULTRY JOURNAL PUBL. CO., published monthly, at Chicago, Illinois, for April, 1916.

State of Illinois, County of Cook, ss.

Before me, a Notary Public, in and for the State and county aforesaid, personally appeared James W. Bell, who, having been duly sworn according to law, deposes and says that he is the Editor of the AMERICAN POULTRY JOURNAL, and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management (and if a daily paper, the circulation), etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse of this form, to-wit:

1. That the names and addresses of the publisher, editor, managing editor, and business managers are:

Publisher—AMERICAN POULTRY JOURNAL PUBL. CO., 542 So. Dearborn St., Chicago, Ill.

Editor—James W. Bell, 542 So. Dearborn St., Chicago, Ill.

Managing Editor—Prince T. Woods, Silver Lake, Mass.

Business Manager—James W. Bell, 542 So. Dearborn St., Chicago, Ill.

2. That the owners are: (Give names and addresses of individual owners, or, if a corporation, give its name and the names and addresses of stockholders owning or holding 1 per cent or more of the total amount of stock.)

James W. Bell, 542 So. Dearborn St., Chicago, Ill.

Henry G. Eisert, 542 So. Dearborn St., Chicago, Ill.

H. M. Bell, Congress Park, Ill.

B. M. Eisert, 1455 Balmoral Ave., Chicago, Ill.

3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages, or other securities are: (If there are none, so state.)—None.

4. That the two paragraphs next above, giving the names of the owners, stockholders, and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest direct or indirect in the said stock, bonds, or other securities than as so stated by him.

5. That the average number of copies of each issue of this publication sold or distributed, through the mails or otherwise, to paid subscribers during the six months preceding the date shown above is — (This information is required from daily publications only.)

JAS. W. BELL,

Business Manager.

Sworn to and subscribed before me this Twenty-third day of March, 1916.

(SEAL) HENRY G. EISERT,

Notary Public.

(My commission expires March 19, 1918.)

WOOLERY FARM, Box Y, BLOOMINGTON, IND.

Otherwise, put them in an ordinary traveling basket in which is a hot-water bottle.

Place the basket in front of the kitchen fire and cover the chicks lightly with a piece of flannel until the hatch is complete.

In the meantime get ready the coop in which the hen and her brood are to be placed.

When all is ready lift the hen off her nest, give her a good feed of hard grain, and then put her in the clean coop.

After she has settled here quietly, place the chickens under her and leave mother and young to themselves for twenty-four hours.

Do not on any account give chickens any kind of food until they are well over twenty-four hours old. It is warmth, not food, that a chicken requires for the first day or two of its existence.

Watch the mother hen at this period, and see how she broods her young. She sits close and flat, with her breast right on the floor of the coop, and her wings well spread.

She does not at this time "cluck," but makes a soft crooning sound, as if she were encouraging her charges to sleep.

The periods of incubation differ somewhat, and are as follows:

Fowls—Twenty-one days; strictly new-laid eggs, one day less; stale eggs, one day more.

Ducks—Pekin, Rouen, Aylesbury, and common duck, twenty-seven to thirty; Muscovy, twenty-eight to thirty-five — more frequently thirty-four.

Geese—Thirty to thirty-one.

Turkeys—Twenty-eight to thirty days.

When dealing with the broody hen we arrived at the stage where she had brought off her brood and had been transferred with her charges to the rearing coop.

Never forget, warmth and dryness are absolutely essential to the successful raising of chickens. Never, therefore, let a young bird get chilled or very wet, if steady progress is to be maintained.

It will, therefore, be gathered how important it is to have a suitable coop in which to put the hen and her brood.

The coop must be well made, be water-tight, and be kept clean. Those in the open should be made so as to prevent rain driving directly into them; while they must have a wooden floor.

There are all sorts and sizes of coops; but whatever style is adopted the coop must be roomy, since it will be the hen's and chickens' only home and protection for several weeks.

When coops, no matter of what kind,

are placed under shelter, such as a dry barn, wooden bottoms are not absolutely necessary; still they are better with them.

The floor should be made of good stout wood, be well tarred underneath, and be fitted with scantling (two pieces) running from front to back, so as to permit of the bottom being an inch or two off the earth.

Another important thing to consider in outdoor rearing is the position of the coop. Possibly the best situation is in an open-fronted shed facing south.

So placed, the coop and its inmates are very little affected by sudden changes of wind, they get the benefit of any sunshine there may be, and may easily get away from rain.

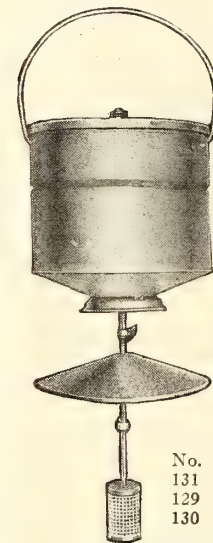

Kant-Klog Automatic Feeder

6-Quart
only

~~\$1.20~~

\$1.60

10 Quarts
The Original

The original "Kant Klog" automatic feeder: feeds anything from millet seed to whole corn, either mixed or separate. Swinging pendulum motion — absolutely adjustable — simply impossible to clog.

Birds peck at grain in bait carrier, swinging pendulum and grain drops from cup under hopper to deflector and then on ground.

BARGAIN EXTRAORDINARY. At the Milwaukee Show, January 21st to 26th, 1916, a show that compared favorably with The Coliseum, in White Wyandottes I won 5 out of 6 firsts in the second largest class in the show. I won 1st and 5th cocks; 1st and 2nd hens; 1st cockerel; 1st and 2nd pullet, and 1st old pen. If you question the quality of my Wyandottes, write Judges W. C. Pierce, Theodore Hewes, or Mr. Wells. I have 8 pens mated of the very best Wyandottes in the country, and I will sell eggs from these pens in limited numbers at \$3.50 per setting of 15 eggs—not more than 2 settings to any one customer. If you are interested, place your order early. Frank E. Hering, South Bend, Ind.

I Can Show You How To Make Money With Poultry

The Dollar Making Line

HERE'S the book that tells how. I want every poultryman in America to have one, and I'm going to *give it away* to every man who sends his name and address.

Whether you're a beginner or an old-timer, you'll get lots of benefit out of this wonderful book. It shows the mistakes you make and how to avoid them. And it shows the things you ought to do.

I was in your fix. I saw my valuable poultry harmed and my profits cut in half because I didn't *know* the right things to do. You can profit by my experience as told in the

"Poultrymen's Text Book"

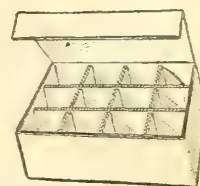

Every poultryman knows that the biggest leak in the poultry business is lack of inexpensive yet efficient apparatus. On the border are some of the things you need at prices that are just your speed.

Make more money out of your poultry. This book tells how. And it's absolutely free for the asking. Write today.

AMERICAN POULTRY JOURNAL

"WE LEAD - OTHERS FOLLOW"

Make Your Flock Natural Layers

THE biggest-paying, best-producing hens are always natural layers. Forcing fowls to lay by feeding heavy, rich foods may tell on the health of the birds and it often injures their breeding quality. Forced eggs as a rule are not fertile.

Red Comb Poultry Feeds Do Not Force the Eggs

Red Comb Meat Mash, the great egg producer, is made of oat-meal, oil-meal, corn-meal, meat scrap, wheat bran, wheat midlings, alfalfa-meal, and *not over 5% shell and 1% charcoal*. These ingredients, the best earth can produce, are mixed scientifically by experts. They form a correctly balanced ration that will give growing health to your flock. Red Comb Meat Mash produces natural layers; it helps the hen by giving it in correct proportions egg-making food.

Unbalanced Rations Produce Fat

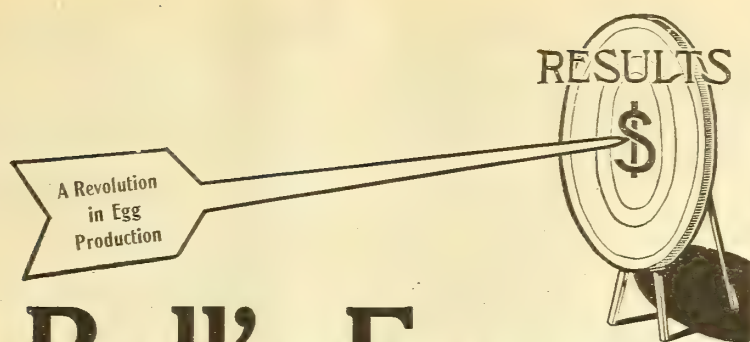

In building good egg-laying strains in your flock, poultry experts will tell you the value of the *correctly balanced poultry feed*. *Unbal-*

anced rations produce fat. Fat birds are not good producers.

See your Feed Dealer today. Ask him to show you the Red Comb line of poultry feeds. Red Comb, the big, universal brand, is used and recommended by successful poultry raisers and authorities the country over. Start feeding Red Comb today for profits. It makes heavy layers in nature's own way, because it contains egg-making ingredients, balanced correctly, that mean health to the flock and fertile eggs. Ask your dealer today. Write for valuable Poultry Book, written by six of America's leading poultry experts. *Free* to poultry raisers.

HALES & EDWARDS CO., Dept. B, 327 So. La Salle St., Chicago, Illinois
(Formerly Edwards & Loomis Co.)

“Means Health”
Red Comb

A Bull's-Eye

George G. Newell's new book, "A Revolution in Egg Production" tells you how to hit the bull's-eye of *Results*. It shows a method that will

Increase

Your Egg Production

100%

during the molting season and in the winter when you need it most.

It takes nearly all the eggs your hens lay to pay expenses, doesn't it? *Every additional egg you can make them lay is clear profit.* This book is not a jumble of clippings like many on the poultry industry, but an intelligent, well written guide to success. No man or woman has been in the poultry business so long or knows so much about it that they can afford to pass this offer by.

We said you could increase your egg production 100%. It has been done. You can do it.

Don't rack your brain with doubts!

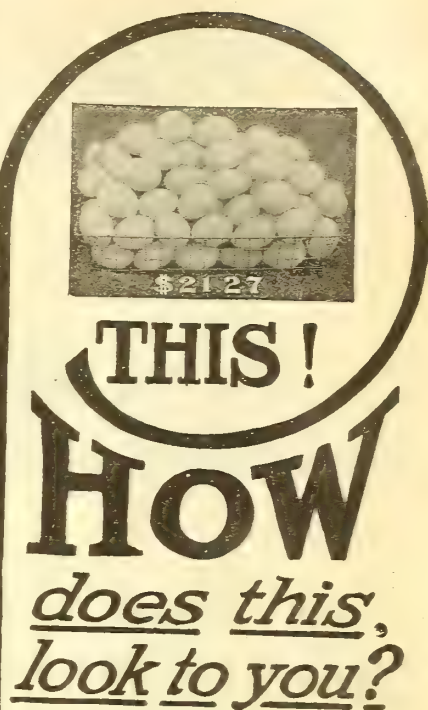

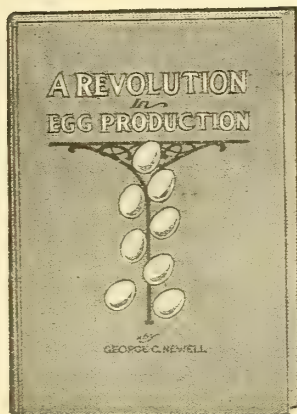

"Procrastination, the thief, stealeth away thy fortune"

542 S. DEARBORN ST., CHICAGO, ILL.

Many \$3.50 Utility Anconas—Sheppard's strain—will produce eggs to the value of \$21.27 and over within a year. We have abundant evidence to that effect. That's why there is a quickening demand for **Sheppard's Famous Anconas** from every part of the world. Not only are they the World's greatest egg machines and winter layers—with the somewhat amazing egg record of 256 average for a flock—but they're wonderful prize winners as well.

**Sheppard's
Famous Anconas**

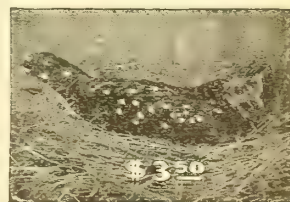

Score Nearly All Firsts at
Madison Square Garden

For nine consecutive years my birds have won three times as many first and second prizes at the nation's greatest shows—including recent exhibits—as all my competitors together. You see why they are "famous"—and best, don't you?

If you want winners—or egg producers—write for catalog. Don't buy eggs, baby chicks or stock until you read the story of Sheppard's Famous Anconas.

A handsome book of 368 pages, each 6x8 inches, encumbered with 112 full page illustrations

**THE NEW REVISED EDITION
of the
Standard of Perfection****N**OW READY, and will be the only recognized authority on all Standard requirements of American-bred Land and Waterfowl until 1923—eight years in service.

Since 1874 the American Poultry Association has issued under copyright, many editions of the Standard, but this issue is, without doubt, the masterpiece.

It is the one great book most used by judges, fanciers and breeders, and the only recognized authority in awarding prizes in the Poultry Shows of the United States and Canada.

The new edition contains 112 full page illustrations of Chickens, Bantams, Ducks, Geese and Turkeys by America's foremost artists.

A new nomenclature indicating each section of all Standard breeds and varieties—male and female.

A glossary of fifteen pages describing and illustrating many technical terms used by poultry breeders.

A complete list of recognized disqualifications for each American standard-bred breed and variety.

A chapter on cutting for defects. A full and complete standard description of each and every recognized Standard breed of Land and Waterfowl, giving the standard requirements in every section, weight, size, color, markings and shape.

No poultry breeder should be without a copy

Buy a copy and know the standard requirements for all American standard-bred breeds and varieties. Price, cloth, \$2.00; leather, \$2.50. Sent postpaid.

Keep Those Nests Clean

Mites, scaly leg and germs of roup, canker, white diarrhea and other diseases lurk unseen and unsuspected in the straw or shavings. Neglect may be the cause of infection wiping out your flock. Prevent the entrance and spread of disease by sprinkling the nests with

CARBOLA
The Disinfecting White Paint

Guaranteed harmless to the birds yet is 20 times stronger than carbolic acid in the destruction of germs. Comes in powder form. As a paint for the walls, ceilings and floors of poultry houses, cellars, dairies, barns and other places it is unequalled. Just mix with water and put on with brush or sprayer. Will paint any surface a beautiful snow-white and disinfect the premises at one operation. Will not taint food products of any kind.

Use It Instead of Whitewash

Will never flake, peel or blister. Adheres to wood, stone, brick or cement. Get it from your dealer. If he will not supply you send his name and your order to us.

10 lbs. (10 gals.) for \$1 and postage. 20 lbs. (20 gals.) for \$2 delivered free. 50 lbs. (50 gals.) for \$4 delivered free.

A trial package, enough to paint and disinfect 250 square feet, from your dealer or sent by parcel post for 25 cents.

isfaction to over 4,500 customers
in this and foreign countries.

Summer Prices

Grade A Eggs... 20c	Grade A Chicks... 30c
Grade B Eggs... 12c	Grade B Chicks... 20c
Grade C Eggs... 6c	Grade C Chicks... 12c

My guarantee on eggs and
chicks during this special sale is
arrival of eggs in good hatching
condition, and the arrival of
chicks in perfect health. Have
your express agent give you a
statement describing condition of
eggs or chicks if received other-
wise than as above guaranteed.
Can make immediate shipment of
eggs. Can usually ship chicks
within 5 days after receipt of
order.

Special Stock Sale

In all my breeds I have some
exceptionally good breeders (hens
and cocks) to offer for the first
time. This is stock that I would
not sell during the past four
months. It is the stock that has
produced the eggs and chicks for
over 4,500 satisfied customers. My
regular prices are very reasonable.
This sale gives you the opportunity
of buying real layers, a foundation
for your future success. I have
some very good cockerels and pul-
lets growing nicely. You may
want some of them. Advise me of
your wants. I will be pleased to
quote your prices on same for late
summer and early fall delivery.
Do not overlook the advantage of
booking your order now. It means
a reserved selection and mutual
benefits.

Write for my instructive illus-
trated catalog. It has helped
others and will undoubtedly help
you.

SPECIAL SALE OF ADULT

**Buff and White Orpingtons
S. C. Rhode Island Reds
White Plymouth Rocks
White Wyandottes and
S. C. White Leghorns**

COMES FOR YOU IN JULY EACH YEAR

Scores of customers look forward to this sale as being their opportunity to secure Breeding Stock for the following season of a higher quality than their money will buy at any other time of the year.

You can buy one and two-year old males and females for just half the price the same birds would have cost you prior to the breeding season. You can buy part of my birds of any quality from the highest to the lowest; so you have a wide range of prices and can secure just the quality you desire. Birds that will WIN FOR YOU next winter and birds that will BREED YOU WINNERS.

You know about OWEN FARMS AND ITS BIRDS. If you have not seen the NEW CATALOG you have a real treat in store when you send for it and read it. You will appreciate the importance to yourself of basing your future success on OWEN FARMS ESTABLISHED LINE-BRED STRAINS.

Madison Square Garden Winners

393 OWEN FARMS BIRDS have won FIRST PRIZES at MADISON SQUARE GARDEN, NEW YORK, as far as competition from other breeders is concerned. NO SIMILAR RECORD HAS BEEN MADE BY THE BIRDS OF ANY OTHER BREEDER IN ALL THE WORLD.

1916 YOUNGSTERS

You can buy OWEN FARMS EARLY COCKERELS and PULLETS for your FALL FAIRS at very moderate prices and MAKE YOUR WINNING CERTAIN. My early January pullets commenced laying May 29th, so, as you can see, my youngsters will be mature for you. Will only raise the cream of my early cockerels, and can give you SURE WINNERS for your FAIR from these SELECTED BIRDS. Tell me about your competition and let me quote you.

MY NEW CATALOG

You will find in this profusely illustrated 56-page book, complete descriptions of MY FARMS, FLOCKS, WONDERFUL WINNINGS, UNEXCELED UTILITY QUALITIES, etc. A careful reading of this book will make you an Owen Farms customer. The results you will obtain from stock or eggs will make you my permanent customer.

A Fancier's Pride in His Work

We're proud of our birds because of their quality. Proud of our 8 years spent in perfecting this quality. Year by year, as our business has grown, we have discovered new and better methods of breeding, mating, feeding and housing. The four factors that go towards making blue ribbon winners. We want you to know all about "Mirimichi Quality," about our wonderful winnings at the World's Fair, New York, Boston and other shows, so we have prepared a catalog that gives you an insight into our "Quality." S. C. Rhode Island Reds, White Rocks and White Wyandottes. This book is free, so write for it today.

JULY, 1916

J. C. FISHEL—PIONEER POULTRYMAN

J. C. FISHEL, of "Fisheldotte," Hope, Ind., began breeding fancy poultry in 1879 and he has been breeding fancy poultry ever since. His first catalog was issued in 1883 and was printed by C. J. Ward, of the AMERICAN POULTRY JOURNAL. At that time he was breeding Dark Brahmas and Brown Leghorns. No one was making a business out of poultry keeping; it was only a side line then. When the poultry business had developed to capacity enough to require his entire time Mr. Fishel made it his exclusive business.

"Fisheldotte" farm specializes in White Wyandottes exclusively, has been very successful in the show room and sells breeding and exhibition stock all over the world. While the breeding is always for exhibition quality, the firm has never lost sight of utility values. The business has increased each year and of late they have been furnishing many birds for stocking large broiler and egg farms. They have named their strain "The World's Best White Wyandottes."

Midsummer Management of Poultry Yard

Poultry House Essentials, Selling Surplus Pullets, A Satisfactory Colony House, Growing Late Crops of Green Food.

By Maurice H. Decker

BEFORE BUILDING new hen houses, the poultryman should carefully consider the requirements of a comfortable, economical structure. He should bear in mind the successful laying house embodies:

Ample ventilation at all seasons.

Air tight construction upon three sides and the roof.

No dark corners.

A tight partition placed every ten to fourteen feet in long buildings.

One nest to every 3 to 4 layers.

Nests 12 inches square for Leghorns.

Nests 14 inches square for heavier breeds.

Six to eight inches roost space per bird.

Four to six square feet of floor space per bird.

A floor that is not dusty and that can be kept in a sanitary condition.

One square foot each of screened opening and glass sash to every 10 to 14 feet of floor space. The screened opening to be protected by burlap shutters in severe storms and zero weather.

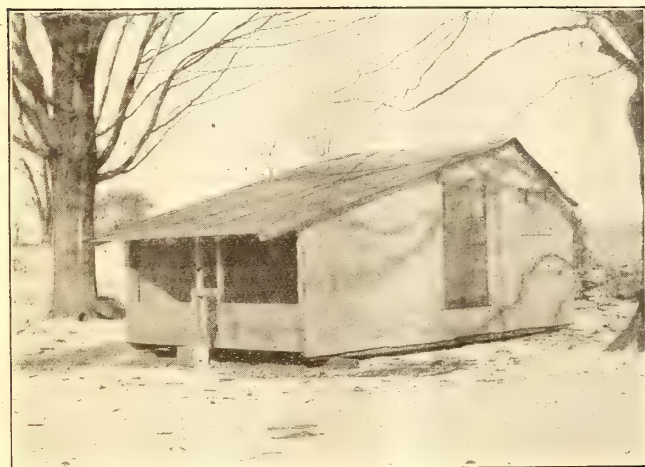

No fussy interior fixtures that hinder efficient cleaning.

Dropping boards 2 feet from floor and roosts 1 foot above boards.

First roost 12 inches from wall, remainder placed 15 inches apart.

* * *

Poultrymen are realizing more and more each year that skill in rearing and producing poultry meat and eggs is not the only essential for success. Profitable disposal of the season's out put now ranks equal in importance in determining the success or failure of a poultry business and is something probably more difficult to achieve. Practical up-to-date methods and formulas are now so accessible and widely distributed that each year sees a decrease in the number of failures due directly to lack of knowledge and mistakes in feeding, incubation and brooding, and an increase in those traceable to the employment of unprofitable schemes of distribution. Too many poultry raisers are forced to depend mainly upon the ordinary wholesale channels of outlet at ordinary wholesale prices that seldom allow a profit over the retail prices they are forced to pay for their supplies. Much has been said concerning the development of special markets for the meat and egg branch of the poultry business, considerable more than is seen regarding the disposal of surplus cockerels and pullets, of which latter it is my intention

A satisfactory open-front colony house, 8x14 ft., as used by Maurice H. Decker. There are ventilating doors in both sides at rear, above the roosts, for use in hot weather. See "Midsummer Management of Poultry Yard."

to write describing the means we employed last season to successfully move our surplus stock at good profits. My attention was turned in this direction two years ago while visiting an egg farm of some size where White Leghorns were bred. The proprietor showed me a flock of about two hundred immature pullets penned up and being fattened for market. "Each one of those birds," he said, "will mean a clear loss of twenty cents when they are marketed. I can't afford to winter them over for spring and summer eggs, as my laying houses are now full of earlier hatched stock and I had to hatch them to be sure of having enough layers for the season. I have tried with little success to work them off as breeding or laying stock and the only way now is to ship them to market where they will each net at least twenty cents less than they cost me to raise."

This started me to thinking that we were ourselves every year selling a number of surplus pullets at a loss and I resolved to improve, if possible, our methods of marketing this class of our offerings. Accordingly last season we spent nearly as much thought upon the problems of selling as we did upon those of hatching and rearing, with results that paid well for the trouble, as I will show.

Accordingly along in early fall when the broilers were all sold and some of the early hatched pullets had begun to lay, we moved two new colony houses up close to the public road, cleaned and whitewashed them and placed in each a carefully selected pen of pullets. These were selected strictly for uniformity of size and shape. We have learned by experience that an extra good bird in a pen of fifteen usually passes unnoticed, but a poor one, poorer than the others, is spotted at once. Each house was neatly fitted up with new nests, metal mash hoppers, drinking fountain and an automatic feeder, the whole presenting a very attractive and complete unit of layers. The fowls, even the ordinary quality ones, were carefully washed and gone over for off-colored feathers, the same as if intended for the show room. A sign reading "Laying Pullets for Sale" was hung upon each house and customers awaited.

These two pens were our highest priced birds, priced purposely high, as we did not care to sell them immediately. They were our advertisement and an excellent one they proved to be. To a man with even a very slight interest in hens the sight of fifteen busy, singing, scratching, cackling pullets in a new clean house fully equipped with all the attractive apparatus of the chicken business down to fresh eggs in the nests, is an irresistible selling argument. And to people who before had never even dreamed of keeping hens such a sight aroused at once a covetous instinct that proved profitable to us. As we had plenty of other pullets also washed and preened to look their very best at prices that ranged from 80c to \$3.00 each, it was not difficult to effect a good per cent of sales. Even a very ordinary pullet, such as we sold at \$9.60 per dozen, looked to be worth double the money when displayed in this fashion. Our youngest and consequently cheapest pullets were sold mainly to people desiring a cheap start with pure bred stock. The possibility of hatching out quite a number of good birds in the spring from them if well taken care of and fed liberally for development was our special selling argument in these cases.

* * *

The principal requirements of a satisfactory colony house are good ventilation, plenty of light and protection and comfort for the fowls it shelters, such a combination of good points making it perfectly adapted for all ages of chickens, from baby chicks to layers. The accompanying photo shows a type of building we have found to successfully furnish these and in addition to be easy and economical to build and of light weight, which makes it easily moved from place to place. In fact, we know of no other style of poultry house that gives more floor space for a definite amount of lumber—that in 8x14 ft. size is easily pulled by two horses.

This house is 8 ft. wide, 14 ft. long, 4 ft. high at the rear, 6 ft. 2 in. high at the peak, which is 4 feet from the rear, and 3 ft. 4 in. high in front. It is built upon two 2x8 runners 12 ft. long, which are chamfered at each end to make hauling over uneven ground practical, and notched to receive the six 2x4 joist. These are nailed to the runners, the frame squared and braced by diagonal pieces of 2x4 nailed across each corner. The floor boards of 1x6 inch matched stock are next laid and the studs toe-nailed on top of them. This eliminates cutting the boards to fit around the studs, as would be necessary if they were nailed direct to the sub-frame. Three rafters, two rear, two center, and two front studs all of 2x3 stock are used. The window and door straps are of 2x2 and when in place the frame is covered first with 1x6 matched flooring, with the smooth side in, and next with 3-ply roofing.

Upon each side at the rear is a 2x2 ft. ventilating opening, covered by a wooden shutter, and opposite the large sash is placed the door. Two roosts of 2x2 are put in the rear 15 inches apart and the rear one 12 inches from the wall. Four nests upon each side wall in front of the door and window and a dry mash hopper complete the interior furnishings. During hot weather the fowls are kept comfortable by opening the door sash and ventilators and in winter they are amply protected by the depth of the building and its low head room.

In unusually severe weather we stack corn fodder up against the rear and side walls and cover the open front with loose woven burlap screens. This gives the protection of a cave or "bank" house and even our Leghorns do not suffer from frozen combs in these houses. Built from new material these colony houses cost us \$28.00 and accommodate from 25 to 30 fowls.

* * *

During the months of July and August a sufficiency of greens must be supplied fowls upon restricted range if the young stock is to continue its steady growth and the hens effect a healthy rapid molt and be in shape to lay a few dozen high priced fall eggs before the cold of winter shuts them off. For the back yard poultryman a mixture of lettuce, kale, oats and spinach is excellent to broadcast in a corner of the poultry run. The oats should be soaked over night and sown by themselves, as they do not mix readily with the smaller seeds. Given plenty of moisture, which the back-yarder can usually supply with a hose, this mixture will make a thick rapid growth and if protected by a wire frame to prevent its being eaten off too close will last until fall.

For larger flocks we sow sweet corn, sorghum or kaffir in thick drills and when it gets about eighteen inches high run it thru a feed cutter and mix with a wet mash. The sorghum and kaffir do better in dry localities, but our hens seem to relish the tender sweet corn the best.

Sex Control in Poultry Breeding

CHAPTER IV—Corroborative Evidence. *By Herb E. Sharp*

(Copyright, 1916, by Herb E. Sharp and Prince T. Woods.)

THE HOLSTEIN COW "Sunnyside" dropped eight heifer calves, and only one bull, her oldest daughter dropped four heifers and one bull, while the other daughters had dropped no bull to the date of my last information, her only son sold for \$1,000 as a calf, or yearling.

His sire was from a cow with a pronounced tendency in the opposite direction, and that he inherited his dam's trait is shown by the records of his daughters from the old cow "Bessie," three of them dropping twelve bull calves

and only one heifer among them, now what will be the traits transmitted by the son of "Sunnyside?" His dam was a strong female producing cow, and his full sisters have shown that they inherited their mother's character and this would indicate that the dam "Sunnyside" was of greater prepotent strength than the bull she was mated with, and when in normal health she probably was, but we do not know that she was in normal health at the time of mating. If the sire were above his normal strength, and she a trifle below, even for the day, the results could not be foretold until his daughters have closed their life records, or at least a number of them, then the question as to whether they will transmit to their progeny or not will be equally uncertain, for the two strongly developed lines have certainly been crossed, and the "Law of Mendel" may get its work in any time.

The old cow "Bessie" spoken of above was the dam of five heifers and three bulls from the same sire, the first one in turn dropped six bull calves, no heifer; the second one four bulls and one heifer; the third one two bulls. The daughters of this bull from several cows, taken together as a herd, show an average of about 75% bull calves, and the trait was so strongly marked that other breeders have called my attention to the fact that the "Bessie" family was producing a lot of bull calves.

Investigation soon revealed the fact that "Bessie" bulls, when bred to non-related cows produced a normal proportion of heifer calves, but when these daughters of "Bessie" bulls came into milk, then the abnormal proportion of bulls became apparent, thus supporting the theory which has been presented, that the sire does not influence the sex of his own progeny, and also showing clearly that the sire does transmit

to his daughters the traits of his dam, and there is nothing of Mendelism in that.

On account of the fact that this family is running so strongly to bulls I have not taken the time to trace back the trait further than indicated, but the family is registered and the records are preserved by the Holstein-Friesian Cattle Club, and are available to any one who cares to investigate.

At least one prominent Holstein breeder, when buying a "Bessie" bull to place at the head of his own herd, said: "The only fault I see in them is their large proportion of bull calves." That remark was made before the purchaser ever heard of this theory of sex control, and the owner of the herd of "Bessies" was somewhat exercised over the condition,

One of the many prize winning White Wyandotte females owned by J. C. Fishel & Son, Hope, Ind.

for cows of the family, that were real strong in the blood were rather a scarce article, and as production was up to a very high point, one of them holding a world's record for her age, they were thought to be exceptionally valuable.

Several theories of sex control had been tested very faithfully on this family, but without any apparent result, the bulls continued to come, and as milk and butter production remained on a high level, it was comparatively easy to find sale for the bulls, so the trait has been fairly disseminated.

As an example of independent investigation that has arrived at a quite similar conclusion, the following letter is presented, it appeared in *Hoard's Dairyman*, in 1915, over the initials C. S. B., and I have no further knowledge of the author, but quote the letter as published:

Dear Sir:

There were twelve calves born on my place in five years, all were heifers. One cow dropped one heifer, then twins, then one heifer, then twins again, one of these being a hermaphrodite.

The first calf from this cow dropped two calves, both heifers, the first pair of twins have both freshened and both dropped heifers.

One of my neighbors has had a similar number of calves

A new view of the eastern front of the homestead and editorial offices of American Poultry Journal, The Anchorage Farm, Silver Lake, Mass. June, 1916.

dropped, and all are heifers, while another neighbor has had but one cow and her calves have invariably been males.

We are compelled to take our cows away for service, and have had them bred at various periods of heat, and to different sires, this depending on our convenience.

I believe that sex depends more on the dam than any other factor, some females bear males invariably, while others bear females invariably, and still others bear both sexes.

Yours truly, C. S. B.

Here we have not only various periods of heat, but also various stages of the period, various sires, and probably various ages and conditions of the sire, but we have certainly uniform results, when two cows owned by different men produce calves all of one sex, and their daughters all do the same, there can be but one answer, and that answer is heredity.

An imported Jersey bull, whose dam dropped eight heifers, and only one son, was bred to a cow that dropped 6 daughters and 7 sons, two of the daughters have left records available, that show 7 daughters and 4 sons for one and 6 daughters and 3 sons for the other, and I have no doubt that if complete records were available for the other sisters to these cows they would show similar results, for five generations later we find two full sisters with records of 6 daughters and 1 son, and 5 daughters and one son, while the daughter of one of these has started her career with one daughter.

In this same family such records as 6, 7 and 8 daughters and 2 sons are regular occurrences, and while I have searched carefully, all records that have as yet been placed within my reach have shown a strong preponderance of female calves.

The imported bull that laid this foundation was produced

by mating his dam to her own sire, and back of that are said to have been forty years of close in-and-in-breeding.

The available records of many grade cows that trace their Jersey blood back to this old family, have shown quite similar results, and again there have been no exceptions to the rule of more heifers than bulls, one of these dropped 7 daughters but no sons, and one of her daughters to date has 4 daughters and no sons, the other daughters have been dispersed, and records are not available.

Now if these were the records of selected cows, they would not be of any value, but I have learned of the existence of a cow at some distance, secured something of her pedigree, then asked for her record, without indicating what I wanted that record to show, and these figures are the results of the inquiry.

Under no possible hypothesis can any reasonable explanation of these phenomena be made save that of heredity, here we have daughters following with close similarity the records of their dams, and not alone in a single group or family but in widely separated groups and under the most diverse conditions imaginable covering a period of eighty years, or about that time, where intense in-breeding has been continually practiced, and where milk and butter production were the only objects of interest, yet in securing the high-marks of record breakers, these various families have been developed, and their sex producing tendencies have been either ignored, or simply condemned for being so strong to males.

The fact that these records were made under the hands of men who were paying little or no attention to the production of the different sexes, should give them greater value as evidence that, in some manner, the sex tendencies may be transmitted, if it be admitted that some females produce invariably calves of one sex, or even approximately all of one sex, then it must also be admitted that the same female is to some extent liable to transmit that trait to her daughters, and sons if she be fortunate enough to produce them. This is especially true where both sire and dam trace to the same individual, with a clear cut and definite disposition.

Of course where indiscriminate crossing of two or more families is continually practiced, there need be little hope of uniformity, in any character, being found. A cow may have all the great producers in her breed for ancestors, and not a single close up parent that is a real failure, and yet in spite of her ancestry be a hopeless case so far as profitable production is concerned. This may be better understood as a result of crossing blood lines that set up various and varied conflicts in attempts that each line is sure to make to dominate the entire individual, no one can be all black and all white at the same time, and mixing black blood with white, is certain to lead to trouble, sooner or later. If this is true of external features, it must also follow with the internal organs.

If we cross, for instance, Holsteins with Jerseys, or Minorcas with Leghorns, we know that milk and butter, or egg producing ability are all going to go to wreck in a short time, and we know, too, that color and conformation are going to wreck as rapidly as they can, then why should we expect less damage to those delicate organs, the ovaries? They hold the master key to all the laws of heredity, and are governed entirely by those laws, then how can we expect them to ignore the great principle that we all recognize when we see the finished work of those same delicate organs? If disaster should follow the crossing of two separate breeds, then we may well expect disaster, in a slightly diminished form, perhaps, from the crossing of two separate families in the same breed.

It is admitted that the introduction of "New Blood" must be done with care and a great degree of intelligence, if at all, to avoid the wreck of desirable qualities, yet it has been strongly urged that new blood is necessary for the maintenance of vitality, constitution, etc. The great "Stoke Pogis," probably as good as any Jersey sire ever brought to America, was the result of close in-breeding, the cow "Purest" was seven-eighths the blood of her sire, and the other one-eighth was related to him very closely.

These are not isolated cases, but they are well known examples of intense in-breeding, and many more might be quoted to the same end.

In-breeding has been accused of producing sterility, but there is not a single case on record where it has been proven.

guilty, the mule is sterile and it is the result of a cross, can that be answered?

A Philadelphia doctor, and dog fancier, after several years experimenting and careful breeding, finally announced to his friends that he had discovered sex control, and that he had developed a strain of dogs whose puppies were averaging a high percentage of males.

The friend suggested that he mate some of his all male producing dogs with some females that were known to have given more females than males. The results were disastrous, for the females produced just as they had in the past, more females than males, the doctor then announced that sex control would never be discovered, for it was one of Nature's hidden secrets; mayhap if the worthy doctor had been more patient he could have mated those same dogs to their own daughters from those all female producing dams, and in time, if he were persistent, he certainly would have developed the fact that the dam controls the sex of her progeny, without the aid or consent, as we used to say, of any foreign nation.

The dam controls the sex, she has to nurture the young, so why not control some things in regard to them? It is enough that the male should appear only in the role of a transmitter, and if he but transmits the good qualities of a dam that had no bad ones, he has done far more than the most of the country sires we have.

Let us value our breeding stock principally for those characters that may be hereditary rather than those that may depend largely on external conditions, for instance, a cow, Tillie Alcartra, gave 30,000 pounds of milk in one year, but if she had had only half the feed she would not have done half so well, so the question of feed entered largely into the making of that record, and while her ability to consume great quantities may and may not be transmitted to her progeny, there is nothing in the record itself to indicate her prepotency.

A steam engine may run 100 miles an hour, but if we keep it going at that rate for hour after hour we may not have any engine left the next day, and the same thing is true of a cow or a horse, or a hen, if they be driven at top speed for too long a time they are apt to be weakened, and instead of producing better progeny they are apt to give us weaker stock. But having the ability to stand high pressure, and to maintain the speed for a long time, if we give them such exercise as may be required to maintain a rugged condition, they will reward us by giving us progeny capable of going even further and faster than they themselves could go, and what boots it whether we know just how far and how fast they can go, so long as we know that each generation is better than the last?

Is not the girth and shape of a cow of more value in computing her worth than the fact that she made 30,000 pounds of milk in a year? Is not the weight and length, from tip to tip, of a hen of greater value for computing her worth as a breeder than the fact that she has laid 300 eggs in a year? And last, is it not of more value to know that a cow will give her owner six or eight good profit earning daughters of greater value to the dairyman, than the fact that she has produced an enormous quantity of milk and is giving six or eight sons and no daughters? To the poultry breeder whose annual hatch is one-half cockerels, the hen whose chicks average eight or nine pullets to one cockerel would be quite like a dream of heaven, yet probably in every flock of pure bred and intelligently mated fowls there is likelihood of finding such a hen.

Three hundred eggs per year does not indicate prepotency, but nine pullets for each cockerel in every hatch is something, and if this be backed by a long pedigree showing intense concentration of the blood of some fine individual, then we have a very accurate test, and can build intelligently, both for greater percentage of females and a greater ability to produce the golden eggs and at the same time rest assured of steady and permanent increases in the size and weight of our stock.

Now let us look at some of the lower orders of life, the plants in our fields, and we find some new thoughts. Here is our common corn; corn is hermaphroditic, that is, each plant develops the organs of both sexes, and this is common in nearly all plant life, some there are, like some of the strawberries, and some others that carry only the organs of one

sex, and this is very unusual in these lower plants. Now does anyone question that, here at least, sex tendencies, as shown by a disposition to produce hermaphrodites, is hereditary? Or is it to be shown that the Pistillate varieties of strawberries are not inheriting the character from their parents and transmitting it to their descendants? And if these forms of life carry their sex characters as hereditary traits, then we can well demand that those who doubt our contention shall at least present the evidence and show at what time in the great scale of evolution from the plants to the animals the power to transmit this greatest of all characters has been lost.

Plants have the power, and have held it since the beginning of life, some rare cases of animals have been cited, with the evidence that some have shown their ability to transmit their characters, some have lost the power thru indiscriminate crossing of the blood lines of different families, but this does not preclude the possibility of finding by careful search those few who still retain the happy faculty.

We might go on forever adding to the score of definite cases where one or the other sex tendency has been faithfully transmitted from generation to generation, if our case has not been proven, then any other character may as well be denied the power of inheritance.

In all other characters the power of inheritance is conceded on far less definite evidence, except the veracity of the writer be called into question, and this can be shown only by a comparison of the records referred to, which are the property of the cattle clubs mentioned. If a cow has a spot on her side and the same appear on one of her calves, we immediately credit the law of inheritance for the mark, without waiting to see if the next calf or the daughter's calf will show the same.

The cow "Sunnyside" dropped eight heifers and one bull, and when her daughter dropped four heifers and one bull, our case was as complete as the majority of breeders dare to demand of the laws of heredity, but here we have cited case after case, family after family, with registered, recorded pedigrees that are beyond question, then we have cited the plants that have never yet failed.

If a hen has a crest, and her son or daughter has the same, we credit the law of heredity: if her eggs are all a dark brown color and her daughter's should be the same, even with a weakened or lighter color, we still credit the law of heredity, and if a hen lays eggs that are long and slender, as a rule, tho an occasional one may be more round and even, let her daughter's eggs be the same to a slight degree and we credit that to the laws of heredity, and so when any breeder finds a female whose progeny is nearly all of one sex, numbers being duly considered, and the daughters of that female show a similar record, or the daughters of a son of such a female show a substantial degree of similarity, then we can clearly charge this result to the laws of heredity as well as the others.

While the pedigrees, with registered numbers, of the animals named might add somewhat to the authenticity of the evidence presented, space here is limited, and values of individuals named might suddenly be changed by the owners so that it seems better to leave the matter as it is, those who are fair minded have probably seen enough, and the rest would never be convinced if we wrote on forever, even as the babbling brook.

For some time California has had an olive day, orange day, grape day and raisin day, and now comes the announcement that an egg day is to be instituted and a campaign has already been started, urging the observance of the day thruout the state. On that day the men, women and children of the state are urged to eat all the eggs they can hold, served as suits their individual tastes—boiled, fried, poached, shirred, scrambled or raw.

The estimated value of poultry and eggs which will be shipped from Morristown, Tenn., during the current year is \$2,225,000, and indications are that this preliminary estimate may be largely increased by heavy shipments forecasted for the fall season.

Hail to the Beautiful White Orpington

Does Nice, Juicy, Tender Fried Chicken Appeal to You? Can You Resist a Deliciously Browned, Sizzling Roast, Bearing the Familiar Outlines of a Turkey? Third Prize Article in Aldrich White Orpington Contest. *By S. B. Brennan, Berwyn, Ill.*

WHAT PROGRESSIVE BACK-LOTTER has not asked himself, "I wonder what breed will give me the best results, which are four-fold?"

First—Eggs. Large, attractive, uniform and, above all, many of them, particularly when prices are high.

Second — Meat. Delicately flavored, tender, lots of it, particularly breast meat, and (lest we forget) the breed best adapted for early broilers.

Third—Appearance. Poultry that I can take pride in and enjoy showing to my friends and neighbors, in fact an ornament to the place. If keeping poultry is to be my hobby I want the best, as I also desire to show my birds at a local show or two just to see how they stack up.

Fourth—Docility. Birds that are tame and easily handled. As a back-lotter, after having made a thoro test of four varieties for the breed that best suits my purpose as a general purpose fowl, I chose the Single Comb White Orpington and I heartily recommend them to others for the reasons that follow.

The White Orpington, altho a heavy fowl, is a very good layer of brown or tinted eggs, particularly in the winter when eggs are high. This does not mean that they are not good layers all the time, as I have found in many tests that even in summer they average up better than many of the so-called egg breeds. One of my Orpington hens laid 203 eggs in one year and six of her daughters in their pullet year averaged 135 eggs each. With many people "eggs is eggs," but do you ever stop to consider a dozen eggs from a weight standpoint? About a month ago I noticed some eggs at a soda fountain and picking out a couple at random I found the total weight of the two eggs to be three and one-fourth ounces or nineteen and one-half ounces to the dozen. The eggs from my flock of Orpingtons average consistently from twenty-five to twenty-seven ounces per dozen and I have selected them weighing thirty ounces to the dozen. You egg lovers, jot that down.

Does nice, juicy, tender fried chicken appeal to you? Can you resist the appeal to worth in a deliciously browned, sizzling roast, bearing the familiar outlines of a turkey? If you are an epicure, I would like to see you beat a young White Orpington, even tho the skin *was* white before being

cooked. And when we have guests to chicken dinner on Sunday, we like to feel that there is something beside bones left for the family on Monday.

The yellow skin and the white shelled egg are mythical delusions which some people carry with them, because—well, now has anyone ever really discovered why yellow skin and white shelled eggs are preferred in some markets? I have yet to hear of any real reason.

To show the fallacy of the yellow skinned, yellow legged fowl being the best for market purposes, a prominent White Orpington breeder told me that when he broached the subject of having a butcher handle White Orpingtons, he was told that they would not be good sellers on account of the white skin and legs. The butcher was urged, however, on the promise of reimbursement, if his claims were justified, to try some out on select trade, with the result that the breeder could not supply the demand. This shows that the White Orpington as a market bird has come to stay and needs a little judicious pushing by its breeders to show the public what its merits really are. As broilers, the Orpingtons are in a class by themselves for delicacy of flavor and quick growth.

If you are looking for beauty of plumage and carriage, just go to the White Orpington section of any of the large shows, and you will have to agree with me that there certainly is a great fascination to look over the well proportioned and beautifully shaped Orpingtons.

If you were at the last Chicago Coliseum Show, and saw the best array of White Orpingtons that it has ever been my delight to see, you will partially understand me—for example, Quality Prince, the first cock, which prior to that also won first cockerel at the Coliseum in 1913. Now this bird, while a fine specimen of show bird, is also a fine breeder of the laying strain type, as he is the sire of the White Orpington pullet which led the National Laying Contest at Mountain Grove, Mo., last season, laying two hundred eggs in nine months and twenty days before it died August twentieth.

Did you ever visit a friend's poultry yard and try to get near some particular bird that he was endeavoring to call to your attention? How close could you get? Ten feet or possibly not that, particularly if they were any of the flighty breeds. Flightiness is a great detriment particularly to the back-lotter, who works at the shop or office and has a minimum amount of time to spend with his fowls. To my mind, a docile fowls that will allow you to pick it up at will, whether to attend to an injury, condition for a show, or to exhibit its best points to a friend, or prospective purchaser, displays the qualification that is the slogan in the business world today, namely "efficiency."

The Orpington hen makes an ideal mother. She is steady and reliable, gentle to handle and not excitable when you have occasion to disturb her.

Summing up the matter, I consider the Single Comb White Orpington to be an ideal fowl because of its ability to lay many large uniform eggs; chicks grow to broiler size in short time; they are without a doubt a peer in the yard or in the show room; are easy to handle, hardy and not susceptible to disease—in short, they cannot be beaten for beauty and business. The accompanying snap shot will bear out my statements. In closing I would say that I have never failed to make a sale to a prospective customer after he has seen the birds. Hail to the beautiful White Orpington!

A trio of thorobreds. See article "Hail to the Beautiful White Orpington."

Frank and Charles Troutman and Sidney Sherman, who have for some time been operating the Marwood Poultry Farm at Marwood, Pa., have sold the farm and business to Le Moyne Graham, of Butler, and William Pfister, of Woodbine, the latter to have charge of the business.

The Use of Capons as Foster Mothers

How to Stop Losses from Hawks and Crows That Runs into Millions Annually. *By S. K. Burdin, Toronto, Canada*

ALL THE CHICKS stolen annually by hawks and crows were put in one great heap, or their equivalent in dollars and cents could be determined, we would stand aghast.

I am going to tell you, in this short article, how to prevent a large share of it; how to save these chicks for your own use and profit, and how to send these thieves off to live on frogs and mice, as all hawks and crows should do.

All the loss to the poultry industry thru this source, however, cannot be easily determined, because of its untangible nature. When one realizes fully, as we should do, how much faster chicks will grow when raised under *free range* conditions, and how thru fear of these dread thieves chicks are confined and reared in cramped, grassless, unsanitary runs, we will begin to understand the importance of this question.

Another reason for confining the mother hen to a coop or small run is her destructiveness: If allowed her freedom she will scratch and dig up everything about the yard and garden. To prevent this she is confined—the chicks soon find their way out of her reach and Mr. and Mrs. J. Black-Crow bring up their own youngsters at your expense.

On the other hand, even if the hen is allowed her freedom, just when her brood need her protection most, she weans them and they are left motherless. They are bold, venturesome and inexperienced at this age and are an easy prey to Mr. and Mrs. O. U. Hawk.

These conditions are not confined to rural districts alone. In suburbs of our large cities and in villages, in fact everywhere where chicks are raised, their unexpected and unwelcome visits are the constant nightmare of poultrymen, who dread to count their little flocks at night, knowing full well that in their absence during the day the kidnappers have taken their usual daily toll.

Raising chicks is a many sided problem. It is not my purpose to go into details on any point except the matter of brooding and protecting them until large enough to be out of reach of their winged enemies.

In country districts, where free range conditions are almost ideal, the hen is the recognized standard means of brooding today and, as difficult as it may seem, I have set myself the task of changing this: Changing it to a method *so far superior* in every way that *you cannot* afford to overlook it, from the standpoint of either pleasure or profit.

A capon is a gelded or castrated cockerel, and a most valuable acquisition to any flock. The operation is known as caponizing, and with suitable instruments and a little practice it can be performed in much less time and trouble, than can a similar operation on any of our other food animals, like calves, lambs or pigs.

When a cockerel is caponized his whole nature is changed from that of a rough, noisy quarrelsome fellow, to a bird as gentle, refined and affectionate as a pullet. A little handling and they become very tame and enjoy being petted. They never crow unless used as foster mothers—then when chicks are about half grown they crow from sheer joy.

Now, I know many will not believe that it is possible to teach a male bird to brood, cluck and fight for little chicks, but the fact is they can be and are, and that they beat a hen at her own game so badly that I have yet to learn of a single case of returning to the use of hens or brooders when capons have been once tried.

The accompanying cut is from a photograph taken by myself of one of my capons hovering 24 incubator-hatched chicks three weeks old. He raised this brood, under free range conditions, to maturity without the loss of a single bird from hawks or crows, while my neighbors on all sides were losing them by the score.

This is not an isolated case. I have used them for four years under the same conditions and never suffered a single loss. One year a neighbor had a fifteen-acre cornfield adjoining my place. The capons with their broods would disappear in this cornfield in the morning, and remain till noon, and then disappear again till feeding time at night. They take their charges afield, like a hen turkey, excepting they walk slower, giving the chicks more time for hunting. Their head is held high, their vigilance untiring and their warning note is loud, clear and commanding. My Scotch collie learned to recognize this note and would give chase to the intruder until stopped by some fence.

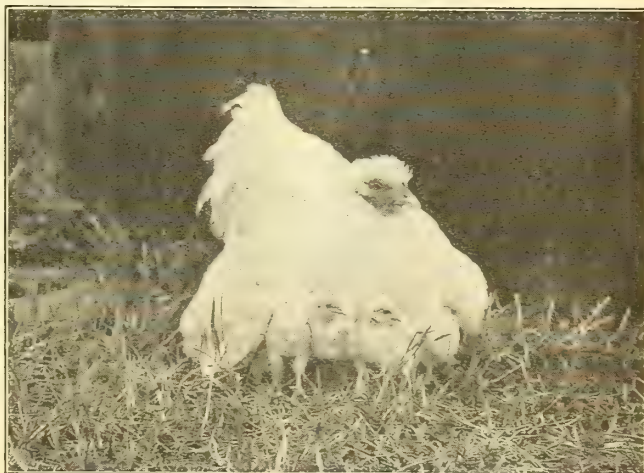

The capon's discipline in his brood is marvelous: He will chastise a half grown chick severely for an apparently trivial offense, but I have never had one kill a chick for any cause, even when changing coops during a sudden storm. As a result of his ranging habits and good discipline the chicks hold together, keeping in a compact little flock. No chicks straying and straggling about, outside his real reach and watchful eye. When he takes them into the shade for a drink and rest, they are all glad and ready to sit down and sleep until he calls them for another trip, when they will start unanimously and promptly.

This program is carried on day in and day out and month in and month out until the chicks weigh four or five pounds each and wean themselves. If perches are properly provided he teaches them to roost as soon as old enough.

When chicks are young, the capon will scratch for them some, but never so frantically as a hen. He just naturally seems to think of protecting them from their winged enemies. He holds his head high and surveys the surrounding country constantly, while his family are as busy as bees, in the grass, looking for bugs and worms.

While, as a fighter in their defense a capon has absolutely no equal, yet on account of his greater size, dignified and commanding bearing, tame, docile and affectionate disposition, quick perception between real and imaginary enemies, he seldom ruffles a feather or is called upon to put up a defense. But if the occasion does arise he will do real battle and not squall and fluster about like some fool hens will do every time you or any one else appears. His whole conduct is so easy, graceful, efficient and satisfactory that he makes a hen appear like a novice.

When his work is done and his brood out of danger, you have one of the choicest delicacies, ready, without any fattening usually, king or peasant ever sat down to eat. Capons do not get tough, strong and unpalatable with age as do cocks and hens, but are sweet, tender and juicy, their flesh rivalling and excelling that of a fat young hen turkey.

A capon hovering 24 incubator-hatched chicks, three weeks old.

Why I Chose the Barred Plymouth Rock

To Assert That the Barred Plymouth Rock Leads in Artistic Merit May Seem to Some a Sweeping Assertion, but I Am Prepared to Back Up the Claim with Conclusive Reasons. A Contest Article. *By F. W. Proctor, North Brookfield, Mass.*

IN SELECTING A BREED of poultry, I chose the Barred Plymouth Rock because in point of color, considered from the artistic point of view, it outclasses all other breeds. Because with all its excellence it looks to great color improvement in the near future. Because its color scheme allows entire flocks to remain attractive. Because its breeding problems appeal to experts. Because of its standing as a permanent interest, many of its large army of breeders having been in line from its introduction as a breed in 1869—a record unmatched in this day of fluctuating interest in breeds.

To assert that the Barred Rock leads the van in artistic merit may seem to some a sweeping assertion, but I am prepared to back up such a claim with conclusive reasons.

We occasionally meet a person who seems oblivious to the charms of a breed so plain in appearance as the Barred Rock. I had one summer for a neighbor, a man who made free to claim considerable of my time in discussing the breeding problems of his favorite breed, and yet never from spring till fall condescended to show any interest in my Barred Rocks, further than once to remark that he "could never see any beauty in a Plymouth Rock!" But that was an exceptional case, for it is within experience that the Barred plumage commands general admiration. In this respect it may be likened to some masterpiece of art which the generality of people, no less than qualified judges unite in praising.

Now this transient neighbor of mine was not color blind, nor an ignoramus. A man of liberal education, holding a position as school superintendent, but, like many others that our higher institutions of learning turn out, was wanting in esthetic discernment. With eyes attuned to the riotous color of his chosen breed, little wonder he should fail to recognize merit in a modest clored fowl.

The primitive races of men are distinguished by a fondness for colors crude and wanting in harmonious effect. And the tendency of civilization is to curb this extravagant taste and set up ideals of beauty in quiet tones of color, simplicity and harmony. This idea is well expressed by Emerson, when he says in praise of a sober hued bird, "Henceforth I wear no stripe but thine; ashes and jet all hues outshine."

"Ashes and jet" nicely describes the Barred plumage. Simplicity is the key note of its color scheme, and simplicity is a leading essential in art. That the Barred Rock's plumage, strong in this element of simplicity, is in the highest degree artistic, is possible of demonstration, as I will proceed to show.

Another essential in art is harmony, and this element the Barred plumage possesses in a notable degree. This appears in the color uniformity of the plumage as a whole, so that a specimen pleases according as the body color holds to a uniform shade.

Then comes the crowning effect, arising in the alternating bars of color, beauty developing in the degree of the perfection of this pattern. The greater the regularity of the bars and the depth of their contrast, within proper color limits, the more complete the artistic effect.

In the Barred plumage as we now see, we have the art requisites of harmony and contrast, without conflicting with simplicity. Then as a finality, we have in the Barred plumage the artistic effect arising in complementary color, which exists in the color contrast between the plumage and the unfeathered parts of the body. For there is no possible color of plumage to compare with the Barred Rock's neutral tone to set off the red of the face, comb and eye, and the orange yellow beak and legs.

Let us now digress for a moment to consider the inconsis-

encies comprised in our color specifications of breeds. It is a singular fact that scant consideration for the principles of art has been shown here by fanciers, especially as new color varieties are produced. Art enters into most human activities save the color varieties of breeds of fowls. We adopt a color for shanks and ear lobes, assign a breed name, and then, ignoring color harmony, exact that all its varieties wear the same, regardless of consistency with plumage color.

The color of face and comb—save in that rare type known as gipsy face—is a constant color feature, and so naturally constitutes the one dominant factor to determine that plumage color most effective to complement the same. Shape, size and color of comb, together with that rich, red color which marks a perfect physical condition, have properly been conceded great prominence in establishing exhibition quality. But the comb's importance as dominating plumage color in order to procure the most subtle effect—derived from color contrast of the two—has escaped attention.

A solid white, as well as a solid black plumage, sets off the color of face and comb agreeably. But it remains for the Barred plumage, presenting as it does the finest effect arising in complementary colors in juxtaposition, to claim the highest place. This arrangement in color composition is a favorite one with painters.

Concentration of interest, by means of judicious placing of colors, is an important element in art. The woman whose beauty is crowned with hair of Roman gold (favored of old masters) attired in neutral tones of color, is a more subtle subject for the brush of the painter than with conditions reversed—the warm color located in the costume and the hair in neutral tone. The skillful painter thus concentrates attention upon the chief center of interest, to which other portions of his work are studiously subordinated. This principle in art is of the utmost importance.

Turner, the great English artist who has been styled the greatest of modern painters, craftily entered for exhibition at the Royal Academy a marine view which was the extreme of simplicity in its prevailing gray scheme of color, and as such was appropriately hung with reference to the color tone of surrounding pictures. At the last moment, Turner produced his palette, with red color, and proceeded to paint a high light upon a buoy in the foreground, thus supplying the hitherto wanting center of interest—with the effect to "knock out" all around it.

This well illustrates the vital importance of holding the use of glaring color to its consistent purpose of putting the finishing touch upon a work of art, and the same finds application in poultry as in pictures. With our Barred Rock, the neutral toned plumage complements the specimen's "high light" of the face and comb, and by color relief heightens the beauty of the head. This feature in turn supplements the plumage color, but by its small volume of color does not rob the plumage of interest.

I am sure that the fraternity of breeders of Barred Rocks, impressed with their beauty, but unfamiliar with their position according to art standards, will rejoice to read that their beauty is amply demonstrated by the theory and practice of color as recognized by artists. This breed whose popularity is so well established, the charm of which is so generally attested, suggests those lines of Keats:

"A thing of beauty is a joy forever.
Its loveliness increases; it will never
*pass into nothingness."

G. W. Roberts, a wealthy ranchman, is planning the establishment of a large poultry ranch on a tract of eight sections of land he owns near Alpine, Texas. He will make a specialty of raising turkeys.

A Beginner Chooses a Variety of Poultry

It Is As Desirable for the Poultry Journals and Breeders to Set Forth the Good Qualities of the Different Breeds As for a Merchant to Display His Wares. *By S. W. Exley, Saskatoon, Sask., Can.*

UNTIL MAY, 1914, I did not know a cockerel from a cock bird—in fact, I knew nothing whatever about poultry. In reality, poultry culture held no interest at all so far as I was concerned; it was a closed book to me.

I followed my trade as engineer, until the hard times hit this part of the country. In July, 1913, I was offered my present position as signalman at a station three and one-half miles south of Saskatoon, out on the prairie. To be candid, I did not care much for it. I was used to

living in the city and the isolation did not appeal to me. After a year, however, I began to like it and to be more and more interested in country living.

I noticed that everyone living out in the country kept chickens, tho I believe they were all scrubs. In May, 1914, a man who was working with me offered to sell me a black hen sitting on a setting of eggs for \$2.50, the price to cover both eggs and hen. The eggs had been under her for a week and as he was anxious to make the sale, he promised to keep the hen on the eggs until they hatched. It seemed to me to be a lot of money to pay for a hen and unhatched chickens, but I finally decided to take the risk.

Two weeks later ten chicks hatched and when they were two days old I brought them over to my place, fixing up a box for them and a runway of old boards. For a week or so I kept a pretty close watch on them, going out every little while to see if they were still living. While they were still small a part of the boards fell down and killed two of them and two others died from some unknown cause. I raised six to maturity, and decided that I had not made such a bad purchase after all.

During July of the same year a neighbor asked me if I would take nine Buff Orpington chicks at twenty-five cents apiece and the hen mother at sixty. After due consideration I decided to make the purchase.

When I had brought these chickens home and housed them, it seemed to me that I had a regular poultry farm. The little buff chicks looked so nice that I liked them from the start—tho I had a liking for a white bird. I studied over and cared for these chicks during their development and by fall I decided to go into poultry raising—not as a business but as a hobby. I had made no definite decision as to the variety of fowls I would raise, but began to look about and take note of those raised by others and decide which was most suitable and attractive to me. In making the decision, the points which I carried in mind were beauty of form and feather and yet combining as many general purpose qualities as possible.

Along in November I went into a book store for a newspaper and while looking around chanced to see a copy of the AMERICAN POULTRY JOURNAL. I bought it, carried it home and read every page. I absorbed a lot of valuable information from it, but I found I was as far as ever from choosing a variety. Every breeder seemed to be convinced that his breed was the best, the most beautiful and altogether the most profitable, and thinking it over I came to the conclusion that this is a desirable state of affairs, for what hope of success has the breeder who is not enamored with the variety he is breeding? The question of selection of a breed is one which each prospective breeder should spend ample thought and time upon. No one can decide which is the best breed for a man to take up but the man himself. On the other hand, it is as desirable for the poultry journals and breeders to set forth the good qualities of the different breeds as it is for a merchant to display his wares. In anything to be decided the best way to prevent making a mistake is to acquaint yourself with the facts. Then think it over,

weigh the evidence from all sides and *decide for yourself.*

I made it a point to visit every poultryman within my reach and to get as much information relative to the breeds as possible. I realized that my decision must coincide with certain conditions such as my locality, the time I would be able to devote to the work, the amount of space I could give over to poultry raising, and my limited knowledge of rules of breeding poultry. From the information I gathered, I first discarded all parti-colored birds as being out of the question for me on account of having to double mate. At least it seemed to me that a solid colored bird was easier to make a beginning with. I finally sifted the matter down to a selection of a solid colored bird from American, Asiatic, English or Mediterranean classes and took every poultryman's word as to his breed with a grain of salt.

During January the poultry show was held here in our city and I went with the intention of making my final decision as to which variety to choose. The show was held in four buildings connected by corridors. In one building were white birds, another black, in another buff and red, and still another parti-colored birds. This gave me a fine chance to choose.

I looked them all over carefully and decided the white bird was the one for me. In the white birds of all varieties, practically every bird looked white, but in all the others there were different shades of color. All good looking birds, no doubt, but not the same uniformity of color found in the white varieties of the different breeds. I was pleased with my decision, but considering the number of white varieties in that "white" building I realized that I still had some task before me. But in taking another walk about I spent fully two hours in looking over every white bird and reached the conclusion that the Single Comb White Orpington was an ideal variety in respect to beauty, and upon investigation I found that they showed up equally well in other respects. My mind was made up and I was fortunate to meet with a breeder who gave me great assistance in selecting a suitable place to get hatching eggs.

One week after the poultry show, it was very cold here, the temperature dropping to about forty-five degrees below zero. The buff pullets I had bought in July started to lay during this cold weather—and they layed and kept on laying. The other brood which was fully a month older never shelled out an egg until the weather came in very warm in March. This lead me to believe that I was on the right track, as it is the general belief that one variety of Orpingtons is just as good as another and the matter of color is simply one of individual choice. During this cold snap, eggs were selling for sixty cents a dozen—just the time when I wanted to be getting eggs.

I have kept White Orpingtons since then and I am pleased to say they have fulfilled every claim made for them—and a little more in some respects. To one who has listened patiently and interestedly to all the superior claims made for the different breeds of poultry, that last statement may seem to be beyond the bounds of possibility. But it is the truth and I am not endeavoring to stretch it. I do not mean to say the White Orpington is the best variety—only that it is the best variety for me, tho I am equally enthusiastic over the White Rock which I have introduced in my yards this spring, and I expect to continue with these two breeds, both of which are good all-round varieties—beautiful, stately and majestic wherever seen. But the White Orpingtons always have first place with me.

Tho well satisfied with the breeds which I have adopted, I continue to see and admire the worth and beauty of all other varieties and to encourage the enthusiasts in poultry culture to boost their breeds and exhibit their wares that the world may see, and seeing become awakened and interested in one of Nature's most glorious handiworks—the domestic fowl.

AMERICAN POULTRY JOURNAL is the oldest poultry paper in America. It has a national and world-wide reputation. The best writers on poultry matters contribute to its columns. It receives the patronage and endorsement of the foremost representative breeders of standard poultry and manufacturers of poultry appliances in the country.

WITH US, and in many localities, the wet weather of this and last season has resulted in uncommonly good clover crops. We esteem fresh cut green clover and good, well-cured, short-cut clover rowen as particularly desirable foods for poultry — much better in actual practical everyday use than alfalfa.

If you produce more clover than your fowls require for daily use as summer green food, cut and cure it carefully for use next winter. It will pay you well to save your clover for poultry food.

We believe that second-crop clover or rowen is best for saving for winter poultry food. It should be cut when about four inches high. Mow in the early morning on a sunny day as soon as the dew has thoroly dried off. Let lay as cut until late afternoon, then bunch up into small cocks before the dew falls and protect with canvas covers. Cocks should be made as loosely as possible. If rain threatens, finish the curing in an open shed or under other cover, do not let the clover get wet. In morning spread it out to dry in sun. Continue cocking at night and drying by day until thoroly cured. Then put it in a loose stack for 24 hours. If it begins to sweat, spread it out and let dry. Stack again at evening and repeat stacking and drying if necessary. To avoid loss of leaves do not shake out the clover when spreading, spread and dry in small bunches. When well cured the clover should be run thru a clover cutter and cut into short lengths of from one-quarter to one-half inch. It can be stored in bins or in sacks and if thoroly cured will keep a long time.

Short-cut clover and grass clippings cut from the

lawn with a lawn mower can be cured and saved in much the same fashion. If the clippings are finished, after the first day, by stacking and drying under cover much of the rich green color can be retained. By cutting the lawn frequently and using a grass collector on the mower it is possible to obtain a pretty fair sized crop of short length grass and clover.

RIGHT NOW is a good time to buy breeding stock. Look over the advertising columns for summer bargains. A good many breeders are now breaking up their breeding pens and selling off surplus to make room for growing stock. It is a good time to buy.

Summer offerings will not always be attractive in appearance, as fowls that have been thru a strenuous breeding season are apt to be a bit ragged and weather stained as to plumage. But it is a good time to buy sound healthy stock birds and to moult them out on your home place.

Put summer purchases of breeding stock into a well grassed orchard or grove where shade, greens and insects are plenty. Keep them cool and comfortable. A roofed shelter, open on three sides and closed only on the side exposed to the prevailing cool winds and rains, is all that is needed to house the birds in summer quarters and they will rest up and moult out better under such conditions. Where a thick evergreen grove can be used they need no other shelter than the pine or spruce trees and will improve with outdoor living. Keep them in outdoor quarters until about the middle of September. Meanwhile get the winter quarters in readiness to

receive them and renovate the runs by plowing and growing some quick crops to sweeten the soil.

You can save money by buying breeding stock now and conditioning it yourself thru the hot season and it will pay well to put the houses and yards—as well as the stock birds—into first-class condition during the next two months. Get busy!

QUITE RECENTLY one of our very good friends severely criticised the men in moderate circumstances who squander money on the "luxury of an automobile" assuming that they rob the family savings, "mortgage the home" and strain every nerve to "own an auto" or because of envy of more fortunate neighbors.

Maybe the desire to own a car and to keep up the pace set by others does tempt some folks into undue and unwarranted extravagance; but we are inclined to believe that the ownership and sane use of a modern motor vehicle will soon help broaden the owner's mind to a sufficient extent to rid him of a lot of foolish notions.

While an expensive car is undoubtedly a luxury and not a wise purchase for a poor man, the modern well-built low priced automobile is a present day necessity and we will be glad to see the day when every family possesses one and uses it. To our mind the automobile is one of the greatest and most useful inventions of the age and a great boon and blessing to mankind. With fine new models selling at a cost that does not exceed the cost of a good horse and outfit, and used cars, in fine mechanical condition, on sale at a cost less than the price of just an ordinary horse without either harness or vehicle, we do not see how any man, with much work to do that requires getting about, can afford to do without an automobile.

When we kept a horse and outfit—the first cost of which exceeded the present cost of a fully equipped up-to-date auto—the expense of maintaining the horse outfit exceeded a dollar a day right here on the farm. The horse had to be fed three times a day, it had to be groomed and exercised every day, whether we wanted to use it or not; every few weeks there was a necessary trip to the blacksmith that wasted half a day's time. The expense kept merrily on, whether we needed to use the horse or not, and we had to use it when we did not want to, because exercise was essential to keeping the animal in good condition. On hot or very cold days when long drives were necessary we felt as if we were imposing on the fine animal and always that desire to avoid any cruelty to a dumb beast proved a mental drawback when there was much hard work that must be done. Tho we like a horse and are still very fond of driving a good one, we decided four years ago that, for ourselves, the horse had to go. We can hire the use of a horse any time we need one for a very low price and we simply cannot afford to keep one.

The first year with an auto opened our eyes to the economy of a motor driven vehicle. It did not have to be exercised, it cost nothing when not in use, the upkeep for the same amount of work was far less than the upkeep of a horse. A few hours work each week kept the machine in fine running condition; it was always ready to go anywhere at any time and to get us back home again, and dis-

tance or speed brought no thought of "cruelty." Whereas a drive of 20 miles with the horse was a hardship, many times, for both owner and animal, the automobile made easy work of 100 miles, and 225 miles in a day could be made with comfort if necessary.

After four seasons' use we are still operating the same car, it is in good condition after carrying us many thousands of miles, we find on summing up accounts, taking into consideration all repairs, overhauling, new shoes, gasoline and oil, the actual annual cost of the auto has been very considerably less than our annual cost for keeping a horse and outfit. It has faithfully served us in many an emergency which, but for the car, might have proved a serious one to some member of the family. It enables us to live in the country and do our shopping and marketing in the city, to get our produce into market with the least expenditure of time and at the least expense. It makes it possible to take the family along for an enjoyable outing on business trips—and we really would not know how to do without it, not only for the pleasure it brings to all of us, but for the time and money it saves us.

When we see milkmen, butchers, fishermen, farmers, and dealers in all sorts of necessities, covering their routes between store and customers in motor driven vehicles, doing the work quickly and well and covering much greater territory in less time and with less effort; when we see "Tin Lizzies" hustling by in the early morning carrying a load of workmen to their daily labor in the shops at less expense than actual carfare; when we see the families out for the blessings of a fresh air trip in the country on holidays and Sundays; the physicians carried with speed to emergency cases; the strayed children brought home after a "run away trip" to the unknown city; the sick or injured comfortably taken to the hospitals that once were "too far away" and the host of other good works of the automobile, we are very thankful that such a necessary invention has been granted to mankind and we hope to see the day when every family owns its automobile just as in olden times the horse was a family necessity.

Only last week our fish dealer, who has bought a "Flivver" truck to take care of his business at "the cost of one good horse," told us: "It is the best roading horse I ever owned and it is saving me time and money; I told father today that if we had bought one several years ago, when the price was four times as great, we would have saved a pile of money and increased our business besides."

We cannot look on the modern, practical, useful, moderate-priced automobile as a luxury—it has become a family necessity and one should be owned in every home.

INDIVIDUALS—or groups of individuals—who are so thin skinned and narrow minded that they throw a fit over honest criticism or "knocking" should take a leaf out of the book of Henry Ford. Some folks are so constituted, and so cursed with exaggerated ego, that they cannot remain unruffled and rational under a fire of criticism or knocking,—whether it be honest or otherwise.

The breadth and depth of man or woman can be more or less accurately gauged by his or her ability to take and make use of the criticism and knocking

handed out to them. Oftentimes the person who proves a severe critic of our acts and deeds turns out to be a very good friend; provided we have sense enough to stay cool under the collar and profit by the experience.

In an interview in which he explained that his secretary, who receives all clippings of what is said about him, had positive instructions not to show him any favorable comment, Henry Ford said:

"A boost never helped me. They never get to me now. My secretaries put them in the furnace. *But I read the knocks.* I don't know it all, and now and then someone says something that gives me a new idea. Sometimes they show me where I am wrong, and I can correct it. *I learn from the knocks.* So, if you want to help me,—knock! Too many times the boosts are not on the square. Neither are the knocks. But the fellow who knocks sometimes shows me a weakness on my part. That helps."

That is a good paragraph for some folks in the poultry world to paste in their hats. It never does any good to get angry and to rave and threaten others because they happen to criticize or knock you. Just take what they say home and think it over,—maybe if you put your ego away on the shelf for a while, and silly pride and foolish vanity along with it, and really think over the criticism a bit, you may get some good out of it. It is a mighty mean and low grade sort of mind that thrives only on having other folks agree with it and that smirks and preens its feathers before fulsome flattery.

And right here there is just one little knock we want to hand to "Hennerly." We don't quite see why he persists in making all his flivvers to fit the "average sized person," or rather the middle sized and the runts. If low priced cars are good for the people, why not give the full grown man a chance to use 'em? As it is now a man who stands close to six feet or over, who tips the beam at 240 pounds, and who has legs so long that he must wear pan— (we mean

trousers) with a 36-inch or longer in-seam, cannot get underneath the steering wheel of a Ford, much less use the levers or ride in comfort. Maybe the springs will hold him, maybe he wears shoes small enough to work the levers, but he can't drive the "benzine buggy" because Nature has grown him too large to fit into the front end. Maybe "Hennerly" is prejudiced against large sized men and wants to freeze them out, or maybe he wants to reduce the standard weights and heights for Americans. Whatever the reason, it isn't broad minded fair play for the big fellows, who might like to drive a "Tin Liz." because of the economy in cost, operation and upkeep, but who are barred out by this unjust and unfair discrimination against the large, tall, or long-legged men. Why hog all the economy for the little fellows? Why not stop trying to beat the record for car production per minute, and put a little time into developing extra sizes for the many long-geared folks this big country holds?

We're not responsible for the size that Dame Nature wished onto us—and there are a lot of folks in the same boat—and it isn't a square deal to be forced continually to pay high prices for expensive things we don't want, just because low cost articles are not made in "extra sizes." We are not a bit thin skinned and can get thru life ducking low doorways, suffocating under low ceilings and getting hats stove in on "average sized" trolley cars and other general transportation vehicles—and not use up more than a fair allowance of "beautiful language"—but, after being taxed to the limit by tailor, haberdasher and shoe dealer—and being exposed to the bumping, experimental, shortening process of Pullman sleeper and steamboat berths—we certainly do protest vigorously to the makers of all low cost automobiles, for their willful cussedness in failing to make motor cars with reasonable leg room for the man at the steering wheel. We would like to sentence the whole crew to a week of daily 200-mile trips in a machine where they had to sit with

knees scraping chin and with a steering wheel making dents in their breast bone. 'Nuff said.

Buy a Home.

A GOOD many years ago, wise old Ben Franklin wrote, "Now that I have a sheep and a cow everybody bids me good morrow." This was in the days of unpretentious living in a newly settled country, yet it gives us a fair idea of the increased weight the acquisition of a little property gives to a man's standing in the community. Probably in Franklin's day the community suffered even more than today from a transient population that had nothing more burdensome to move from place to place than a change of clothing.

The property owner is every locality is a welcome citizen. He forms the vast army of thinkers, planners and workers who keep the wheels of progress moving on. The future of a community rests in the minds and lives of its property owners. But there are a class of property owners who are here today and gone tomorrow. Last week a real estate agent located in a country district told us that during the past ten years he had sold most of the property in his section twice and some of it four times. He said:

"The people are never satisfied. A man buys a place which is apparently just what he wants. He settles down on it, fixes up the buildings, puts out fruit and shade trees, and then for some unaccountable reason decides it is not the place he wants at all and sells out at a sacrifice. The next buyer tears out the partitions put in by the last owner, rips off the piazza and puts on a cement pergola addition, has a disagreement with one of the neighbors over a line fence or pigs getting into his orchard, puts the place back on the market and is gone before the year is up. Of course there is money lost in these transactions, but most of the people seem to think they are going to find an Arcadia or an Eden where everything is just as they want it and nothing ever out of tune."

Most assuredly there is a money loss in moving from place to place and there is a bigger loss in that feeling of rest-

lessness which settles down upon and takes complete possession of the man who is forever on the move. He makes few friends and reaps none of the joys of old associations in a community. He is not long enough a citizen to take a wide awake interest in the betterment of his community. He is known chiefly by his instability.

Money invested in real estate is well spent and if reasonable care and judgment is exercised in buying a home property, the investment will prove a profitable one. And once the deeds are passed and you are located upon the place of your choice, unless there is some very pressing reason for giving it up for another, it will pay you to stick where you are. There is nothing to be gained by a too frequent change of base, but there is a great deal to lose.

Every family should work toward purchasing a home, a place they can call their own. But the satisfaction experienced in its actual acquisition will be slight in comparison to the joy felt in watching it grow and develop under your hands and intelligent toil. By all means buy a home, work for it and enjoy it and it will prove the best investment you ever made.

Suicidal Publishing by the American Poultry Association.

THE following article appeared in the June issue of *Canadian Poultry Journal*, and knowing that all poultrymen are vitally interested in the subject mentioned, we have taken the liberty of reprinting the article in full.—Editor.

There are a number of subjects upon which we feel strongly in connection with American Poultry Association matters.

We are interested because without doubt the Standard poultry industry should be directed by some one good, strong, sound, live representative organization.

One object that is forcing itself upon us at this moment, and the thought that we wish to put into this editorial, is that *the Association should not go into the publishing business outside of purely Standard requirements, and such other needs as would not otherwise be supplied.*

Another is that *it should not take upon itself to authoritatively direct on mating and breeding problems* that thousands of breeders understand better than any one man or small group of men in the American Poultry Association can possibly understand; for by so doing it lends its authority to methods that in the future may of necessity change and may even now be of doubtful utility.

If the Association places its seal of authority on a fixed breeding method by publishing it in a Standard or in any other official publication, indicating to those thousands of intelligent breeders: "You shall breed this way," or even "You should breed this way," then it is the beginning of the end of the American Poultry Association, or the beginning of

another and wiser counselled association. Several opposition associations have been talked of for years. The editor of this journal has been approached more than once with a view to securing his vote or influence on the formation of new associations, and we have always argued against it, because there appeared on those occasions to be no good grounds for forming another association aside from the discontent that was felt with the Constitution and By-laws which did not suit everybody. We really had no time to dig into such things for such an ordinary reason. We were content to abide by the Constitution and by its several revisions, on the supposition that such a condition could do no direct damage to breeders.

But now the Association evidently proposes to take hold of the breeder and say to him "You breed our way or we will put you out of business."

And that is where we make our stand.

It may be said that there is no threat to put breeders out of business.

Directly—No!

Indirectly—Yes!

If the Association puts a rule in its Standard, then presumably it is going to enforce that rule at Association Shows.

The Association has been gradually securing command of the Show business, by giving certain privileges at Shows held under its rules and by withholding those privileges from Shows which do not recognize its authority. Only the leading Shows of the country can afford, even at this early date, to ignore its action; and if the Association controls the holding of or the success of, the majority of Shows, it can control also the methods of the breeders who exhibit at them.

We do not propose to tamely submit that the American Poultry Association shall commit suicide by attempting to

govern the breeding methods of fanciers who know more on the subject, as we have said, than any one man or group of men in the American Poultry Association can possibly know. Somebody must campaign on behalf of the absent members, and we are willing to take the risk of breaking the ice.

Therefore, worthy gentlemen of the Association, it is time to call a halt on your methods. They have not progressed so far as to render it difficult to retrace your footsteps. Later on it cannot be done without injury to the Association. Now it can; and our advice, offered in the interest of the Association, is: *Do it now!*

Do not mistake us as suggesting that the Association should not have a controlling influence at Shows. It should in some respects, if it exercises that influence wisely. The trouble is that the Association is practically governed by the few who attend its annual meetings and those few evidently do not realize that their duty is to act unselfishly on behalf of those who do not find it convenient to be present.

Let us see what the Association is doing.

For a number of years, in fact, about as long as the Standard of Perfection has been published, its indirect requirements have been that breeders must adopt the *double-mating* system in order to secure success in competition at Shows. We mean to say that it has given authority to Standard descriptions of males and females which have been such that in many instances they cannot be produced except by the double-mating system of breeding.

Smith's White Leghorns

Are the Most Consistent Winners in America. Catalog telling all about them sent upon request. Eugene C. Smith, 517 Galena Blvd., Aurora, Ill.

keep your powder dry!

In other words, be prepared for the Fall rush of business.

Get your share!

Don't let the buyers forget you during the dull Summer months. Don't think because you have nothing to sell now, that you can afford to get out of the "limelight." The advertisers that are carrying good sized space now are the ones who will, in the Fall, reap the benefit of the prestige thus established.

The ranks of the buyers are constantly changing—the new are coming, the old are going.

In time of Peace prepare for War.

Our customers were among the big winners this season.

A. A. CARVER, Specialty Breeder

SEVILLE, OHIO

But now, as related in the editorial, "Separate Breeds Standards," in our April issue, the Association proposes by using illustrations of a pullet-bred male and a cockerel-bred female Barred Plymouth Rock, to show "the necessity of using these two types or styles of bird in the successful development of Exhibition Barred Plymouth Rocks." That is to say, it intends to be no longer satisfied with indirectly forcing double mating, but now intends to directly cut out single-mating Barred Plymouth Rocks from all chance of winning in competition. For years the single-mating breeders have not had a chance to compete with any degree of success, and now there seems to be a proposal to finally render double-mating an authorized, and the only authorized, method of breeding Barred Plymouth Rocks. The breeders who prefer to adopt the single-mating method have for years been cut out from all chance of winning, and now the Association proposes to give them another slam by directly authorizing and recommending the double-mating system. This is what has caused a number of breeders to suggest that Shows shall provide a class also for single-mating Barred Plymouth Rocks. That course might satisfy the single-mating breeders of Barred Rocks, but it still allows the thin end of the wedge to remain so that the double-mating plan may eventually be forced upon other breeds.

The Association is doing itself an injury by providing that while the double-

mating system shall be advocated, the natural method of breeding shall be ignored.

That is one move the wisdom of which is doubtful; but the move that in our opinion without doubt is unwise, is to attempt to instruct how to mate to breed winners. That should be left to the Poultry Press and other publishers.

And this brings us to the main argument of this editorial, "Suicidal Publishing by the American Poultry Association.

As a member of the American Poultry Association, and as a breeder, we are opposed to the Association going extensively into the publishing business, for it is dangerous.

As a member we feel that it is suicidal. It is also ungrateful to the Poultry Press which has made the Association what it is.

As a breeder we object to any Association of persons, which possesses a strong influence, taking it upon itself to govern our breeding operations in detail. We prefer to use our own intelligence, supplemented by the writings of poultry journalists and other breeders whose articles are deemed worthy of publication in the Poultry Press or in book form, and aided by the advice of that great big congregation of first-class breeders who don't write what they know.

We object strenuously to the Association assuming the authority to direct "Breed this way or that way."

As a member and as a breeder it is enough that we, with the thousands of other members give the Association authority to make a Standard for breeders, and in so doing take our chances on its suiting our needs. We are content

to abide by that Standard, so long as it is fair and just, and not merely a means to the money-making end, but for mercy's sake do not ask us to submit to the Association's direction and power any initiative in breeding that we may possess. *Kill the Fancier's initiative and pride in breeding winners, and you kill the one thing that makes the Fancier enter the ranks and stay there.*

And in so expressing ourselves we believe we are voicing the opinion of the majority of our readers and of breeders at large.

We have said, that for the American Poultry Association to go extensively into the business of publishing is dangerous. Take the breed books for example, as dealt with in our April issue. Aside from the fact that the opinion of a Committee may be in many cases contrary to the general knowledge and experience of the thousands of breeders, it is possible that even if the Committee's writings happen to be absolutely correct at this date, in books to be published in the near future, those opinions—those directions—may be altogether wrong in future years as the Standard changes, which it frequently does. Somebody gets hold of an old American Poultry Association breed book; follows its instructions, and what are they up against?

The only excuse outside of money-making that American Poultry Association has for being in the publishing business at all is to fill gaps that would otherwise be left open. There may be a few such gaps, but not many. The printing of Forms for Show Secretaries might furnish an example, but that is doubtful for two reasons, the first being that Show Secretaries have different methods of book-keeping, most of them satisfactory, and many of them based on local needs and demands. They fill all general requirements. The second reason is that other good poultry breeders—poultry publishers—Theo. Hewes, for instance, had compiled and was selling (before the American Poultry Association went into business) Forms for the use of Show Secretaries; and they filled the bill.

What did the Association do in his case?

Cut out one of his means of livelihood.

Yet here is a man who, up to that time, had done far more to give publicity to and help the American Poultry Association, than the average member could do. He had studied Show requirements. He had managed big Shows. He is now, we believe, managing more big poultry Shows than any other member of the Association. He is competent to compile and to publish satisfactory Forms, and he did so. We do not know if that action of the Association keeps him away

J. C. FISHEL & SON

Box J

HOPE, INDIANA

from Annual Meetings, but we do believe that his absence is a loss to the organization.

It seems to us that the Canadian Poultry Journal is one of the few publications which can call attention to this matter without being accused of being financially interested. There are but few members of the Association in Canada, and but few Shows that are subject to the rule of the American Poultry Association. They are practically independent, and free from fear of any action of the Association. Therefore, if we were publishing Show forms they would be likely to buy them from us, so that we would not be at any loss on account of the American Poultry Association being in the publishing business. But it happens that we are not publishing such Forms. Therefore, as we have intimated, here in Canada we may be exempt from the accusation of a selfish motive in forcing this issue. At the same time, by so doing, we can remove from the shoulders of editors across the line the possibility of like accusations; for the onus if anywhere is on the shoulders of those who make the proposal.

Poultry Journal publishers should be allowed to conduct their business free from competition by the American Poultry Association.

A single reason ought to be sufficient to convince the Association that it is an asinine action to compete with Poultry Journals in that line.

Here is the reason:

The Poultry Journals are the sole means by which the Association can live and prosper; they are the sole cause of its present advanced position; and their influence has not only been without cost, but has actually furnished the Association with the means of doing business.

Do we need to argue the case?

We think not; but this much we will say: that the entrance of the Association into the publishing business in competition with Poultry Journals is the rankest piece of short-sighted policy that has ever, to our knowledge, been enacted by any Association; and if the policy had been properly presented to the whole membership, it would never have been adopted.

With this first shot it is now up to the Poultry Press to get together and put the Association's thinking apparatus in order—and the Poultry Press can do it.

The thousands of members of the American Poultry Association are more deeply interested in the welfare of Poultry Journals than they are in the money-making schemes of an Association which if properly operated could prosper on the income from the Standard of Perfection, from membership fees, and from other legitimate undertakings.

Our Cover.

THE Rhode Island Red class at the last Madison Square Garden show was without any question one of the strongest ever exhibited at this classic. We take great pleasure in showing on our cover this month a natural photograph of the first prize cock "Champion Gladstone." This bird is the property of Rock Ledge Farm, Southboro, Mass., and is one of their many consistent winners at New York, Boston, Buffalo, Guelph, etc. This bird has all the earmarks of a first-class specimen of the breed and is a wonder in color and shape. He has proven to be a very strong breeder this season and his off-

spring will, no doubt, be heard from at this winter's shows.—L. A. S.

Do You Want the Services of a High Class Man?

WE HAVE on file an application for a position by one of the best poultrymen in the country. A man who has bred some of the greatest prize winners ever produced. This man is capable of managing any poultry or stock farm; he has the knowledge and ability that makes success. Anyone in need of a high-class

house with freshly made whitewash. Treat the nests the same way and dry them in the sun. Paint the roosts, supports, ends, drop boards and all with crude oil, or with a mixture of one gallon of kerosene and a pound of naphthalene flakes. Be sure this is done in morning so that the roosts will be dry at roosting time.

Dust all fowls with pure Persian insect powder (pyrethrum) and do it thoroughly, working the powder down to the skin all over the birds. Apply to each bird above and below the vent and under

Here are illustrated selected feathers from a Ringlet Barred Rock female that are as near ideal plumage as has been produced. Not only is the barring sharp, narrow and evenly spaced, but it extends thru both surface and under-color to the skin.

man should write AMERICAN POULTRY JOURNAL, 542 South Dearborn St., Chicago, Ill., for full particulars.

Lice and Mites.

IT IS time to begin vigorous war on lice and mites. Clean up poultry houses carefully. Remove all nests and burn all nesting material. Remove all litter. On the morning of a good bright, warm, sunny day spray whole interior of

each wing a very little of a mixture of blue mercurial ointment one part and petrolatum three parts (thoroughly mixed). Repeat the dusting with insect powder in one week. If insect powder is not available, obtain flowers of sulphur and use for a dusting powder. It is less lasting in effect.

Be sure that fresh litter and material is clean and bright. Do not use hay or straw litter that has been roiled over by pigeons. Pigeons are about the worst mite carriers we have.

Dr. Woods' Notes and Comment

SUMMER.

O, I like the summer feelin' with its hazy, lazy air,
An' its soft an' drowsy whisper threw the trees;
I like its meller music which is risin' everywhere,
From the waterfalls and thrushes and the drone uv busy bees.

O, I like the summer feelin' with its drowsy monotone,
Uv toads an' bugs an' locusts, an' the crickets' interlude;
I like tur lie and listen with the branches o'er me thrown
Where the brooklet meets the river an' the medder meets the wood.

Yes, I like the summer feelin' cuz it fills my hungry soul
With a glow uv healthy happiness thet nutin' else kin do;
An' I look up threw the branches where the great white cloudlets roll,
An' I feel myself a-driftin' off ter worlds beyend the blue.

—Joe Cone.

For the past two months, in issue of even date, Editor Cornman of the *Poultry Item*, by singular coincidence, has duplicated our quotation of poetry at head of these notes. We don't know how he happened to pick the same bit of verse that we did, but if he succeeds in duplicating us this month with above bit of "Summer Feelin'" from New England's "home poet" Joe Cone, then the dinner will be on us, that's all.

* * *

Just to encourage "C. T. C.," however, we will give him a second chance on timely summer verse and again quote from our staunch New Englander an appropriate bit that suits the season:

EVERY DAY.

Life is growin' brighter,
Every day;
Souls are growin' whiter
Every day.
Birds are singin' sweeter,
Girls are lookin' neater,
Life it grows completer
Every day.

—Joe Cone.

* * *

This is a good time to overhaul and put in order all hatching and brooding equipment not in use. Clean thoroly and paint with a good cold water paint before storing away.

* * *

Be sure that the growing chicks and all adult stock have plenty of shade now that the days are hot, and provide ample outdoor shelter for protection in sudden thunderstorms. Keep cool drinking water before the birds and be sure that it is kept in a cool shady spot.

This is a good time to get stock birds, that will be carried over another season, into an orchard or shady grove. Where necessary to keep fowls in bare runs, be sure to provide them with plenty of fresh greens from the garden and clippings from the lawn. A daily supply of fresh succulent greens is necessary.

* * *

Select a warm bright day for "house-cleaning" the poultry houses. Shut all the fowls outside. Sweep down all dust and cobwebs, take the nests and roosts outside the house and spray or paint with a good lice and mite killer. Burn all old nesting material. Whitewash the nests inside and out and dry in the sun. Clean up the floors and drop boards and spray inside of house thoroly with a good whitewash or disinfecting cold water paint. Be sure to burn all old litter. Freshen up the whole house. Sprinkle earth floors with crude oil applied with a watering pot, after first removing a few inches of the top earth. Remove part or all of windows for the summer season. After the clean up, fill in the floor with good earth or sand.

* * *

Plow or spade up the runs and sow to oats and corn. If shade is not supplied by trees or shelters, make a few canvas or board shelters,—old bran bags make good shelter tents. If runs are large enough, partition off lower end of yard and plant corn. Keep the fowls out until the corn is high enough to supply shade. Growing corn, well started, will supply shade and greens thru the hot season.

All garden waste, weeds and lawn clippings should be given immediately to the yarded fowls so that they can have the benefit of them while fresh. Don't wait until the green stuff is wilted before feeding it.

* * *

Scalded fresh fish makes a fine growing food for chickens. Waste fish is usually plentiful on the sea shore or near rivers and lakes at this season. It is a good cheap food and if obtainable may be given as one full feeding daily, or may be mixed with a moist mash. It sure does promote rapid growth. In most suburban locations an enterprising boy can catch enough fish evenings to supply a flock of chicks and have a lot of fun, too.

* * *

A very satisfactory way to sprout oats for summer use, where fowls have only small bare runs, is to make a frame of 4 in. wide finish strips about 3x6 ft. Cover this with ½ inch mesh poultry wire, on top only. Spade up a bit of the run just the tize of the frame and sow thickly to oats. Cover with the frame, wire side up. Water the oat bed daily. In a little more than a week the oats sprouts will be shooting up thru the wire so that the fowls can reach them and get the tender shoots without uprooting the plants. When the mass in the frame is making good rank growth, remove the frame and start another patch. By use of two such frames a constant supply of fresh greens can be supplied to the average city or town flock.

* * *

Be sure to collect eggs at least twice daily in warm weather and put them promptly into a cool, dry place where the air is good and free from odors. Eggs will spoil very quickly at this season of the year. They should not be long exposed to a temperature above 60 degrees. Market the eggs twice a week and make sure that no stale stock is kept over.

* * *

Under the caption "Conscription" *The Independent* says editorially:

"Has the state of New York gone stark crazy? Her legislature has passed and Governor Charles S. Whitman has signed five bills that require, among other things, all men between eighteen and forty-five to be enrolled as members of the Militia Reserve beginning August 1, and all schoolboys between sixteen and

nineteen to drill not more than three hours each week and go to summer military camps under the direction of the officers of the National Guard, and all school children over eight—girls as well as boys—to receive as part of the prescribed course of instruction such physical training as the regents, after conference with the military training commission, may determine during periods which shall average at least twenty minutes in each school day.

"These laws mean conscription in time of peace. They should be forthwith repealed. The American people believe in preparedness—sane preparedness—but this goes to the very brink of the precipice of militarism."

* * *

It looks as if a good many Americans were unable to stand the excitement of a presidential campaign occurring during stress of the great old-world war. Hysterical preparedness, hysterical fear of some "danger unknown" and the mob-hysteria fed on militaristic oratory, martial music, and the incessant effort to stampede the people into an extravagant military and naval preparedness and general "hurrah boys" without any apparent thought of real social and industrial preparedness, which should precede any attempt to prepare for war in time of peace, is putting a large proportion of our people into a "state of mind" where they appear to have no power of thought or ability to think for themselves. It is to be hoped that this proves to be but a passing state of madness and that it will soon be over with, before too great harm has been done. It would seem that this country must be in far less danger of war at the present time than for many years, and if we are not better prepared now than we have been for a long time, then some very sizable appropriations have been wasted and it would seem foolhardy to pour more millions of dollars down the same rat hole. Just how our bellicose jingoes expect to be able to prepare for some war danger "unknown" is a matter that we would like to see sanely and satisfactorily explained. We don't believe you can prepare in satisfactory fashion against unknown dangers. If we are to go thru life with added burdens of such fear used to tax the shirts off our backs and are to be expected to live in dread and fear of the unknown, we might just as well go back to the government of the middle ages and quit talking about Christianity and a free government by a free people. We don't take a great deal of stock in all this panicky and bugaboo talk; and we sure do dislike to see so much waste and so much pork barrel legislation.

* * *

The hysteria of the preparedness fad seems to have struck the state of Massachusetts only a little less hard than New York. Sundays now, instead of being days of rest, are given over to military evolutions, parades, sham battles and the like. In our own home neighborhood the peace of a beautiful June Sunday was destroyed by a noisy sham battle in a neighboring pasture between a troop of cavalry and some companies of infantry. It lasted quite

a while, burned up a good many dollars' worth of ammunition and ripped up the sod on several acres of good pasture land. After the "battle" was over the field was literally carpeted with empty brass shells left behind by these "soldiers" who are being trained in "efficient preparedness." Considering the high price of old brass as "junk," we wonder why the officers in charge of this noisy demonstration permitted such waste. Surely old world military efficiency wouldn't stand for it. If we must have these noisy and wasteful demonstrations, it is a pity that some week day cannot be set aside for the celebration instead of legalizing wholesale Sabbath breaking under government patronage. Also, to judge from the appearance of a few of the troopers, it might be well for city and town officials to prepare for such Sunday military campaigns by first closing the "blind pigs" and "kitchen bar rooms" and keeping such closed. Certainly a brief one day "practical military drill" might be conducted without the need of filling up some of the weaker boys with "booze."

* * *

We believe that there is abundant room for sane preparedness, for better and more wholesome social and industrial conditions and for decent right living, but we are exceedingly sorry to see such hysterical plunging into militarism and general "high jinks." Even some ministers, catching the hysteria of the mob, are trying to tell us that the teachings of Christ and of Christianity were never meant to be taken literally and that war and preparation for war are necessary. It is a sorry condition of human affairs. We might do well to experience a change of heart and give real Christianity a trial, instead of preaching one thing and practicing another. If it is wrong for one man to kill another, it surely is a greater wrong for nations to kill men by wholesale, and multiplying wrongs never yet made right. Saving life and the conservation

of human life is far higher and more honorable than man killing.

* * *

At the present time labor is mighty scarce in our locality. Many ammunition factories have located in these parts and most of them are working three eight-hour shifts each day. This makes it possible for men on piece work to make from \$3 to \$4 in an eight-hour day and some of them by working two shifts double their wages. As \$2 for a nine-hour day is about the limit that one can afford to pay for even efficient farm labor,—labor is growing more and more scarce all the time. As this sort of factory work is devoted to wasteful production of material to be thrown away in man killing and as more and more men and women are being drawn away from the work of producing foods and other necessities of life—and as the production of foodstuffs, which was never very profitable, is now showing still smaller profits or none at all—we wonder what the effect of such conditions will ultimately be. It looks as if we were likely to find the "high cost of living" soaring so high that it will take \$5 to buy the necessities of life that we used to buy for \$1. It is time we prepared for a little real and efficient productiveness in the things that maintain, conserve and save life and devote far less time to serving Moloch and promoting wholesale waste. It will not do the working man any good to swap a \$2 nine-hour day for a \$4 eight-hour one, if by so doing he is promoting conditions that will cut the buying power of a dollar to far less than half.

W. W. Carpenter East Providence, R. I.

from 32 to 36 cents per pound alive at the grower's door for soft roasting chickens (capons and winter chickens). Today, when it costs more to live and when feeds of all kinds are high in price, the same growers cannot get a price from the same buyers of more than 22 to 26 cents a pound. A few growers, who have cut out selling thru the middlemen and who kill, dress and sell direct their own chickens, are getting 40 to 45 cents per pound for dressed roasters delivered in the city market. The dressed price is practically what it was when the grower used to get 36 cents per pound alive. Locally several roaster growers have stopped raising chickens and turned to other work for a living. They are weary of seeing all their hope of profit go into the middlemen's pockets. Just why, when the high cost of living and increased cost of production hits the grower harder than anyone else, the middleman should feel that he should have a profit of 15 to 19 cents a pound on each 6 to 10-pound chicken to pay him for collecting, dressing and marketing—a matter of a day or few days at most—while the grower is expected to take pretty close to actual cost of production for a whole season's hard work, is an industrial problem that needs solving. Unless the middleman meets the grower a little more than half way and endeavors to help him to show a living profit, the business is likely to die out for want of easy mark producers who are willing to work for nothing. It has been said that competition by western grown chickens, etc., has lowered the market prices of the finished product, but that statement is not borne out by the facts, as retail buyers of quality soft roasters can testify. It looks as if it would be better in the long run for the middlemen to be a little less greedy. Good New England grown chickens and fowls are growing scarce and the crop for this season looks like a very short one.

* * *

In these strenuous days of the presidential campaign, it is pleasing to find individuals who put real worth and true American fair play, in a broad-minded and liberal way, above mere party politics. In the staunch Republican stronghold of Massachusetts at a June meeting of the Ancient and Honorable Artillery Company, Collector of Port of Boston, Edmund Billings, paid the following tribute to President Wilson:

"In what I have to say of the President I speak of him not as a Democrat and not as a Democratic President, but as the President of all the American people, who typifies and embodies in himself all that is best in this country and its citizenship.

"I am aware of the criticisms of his administration, but I know, and you all know, how easy and how human it is to tell another man, even tho he be the President of these United States, how to do a particular job when the responsibility is not yours. I know and you know something of the steadying quality of responsibility.

"And I say and you say and the country in its sober senses will say: 'Thank God for once more raising up another, a great man, in a crisis in the history of our country, who has represented the entire people, who has set forth to other nations an example of real Americanism—without bluster, without bragadocio, without the rattle of the sword in the scabbard—and has maintained for us all peace with honor.'"

* * *

Wheat is high and climbing higher, all grain and feeds have an upward trend in prices. We cannot look for or hope for a return to low prices of feedstuffs for some time to come. There is too much wholesale waste in the world at

present and too little real productiveness. Eggs and poultry are beginning to show an upward tendency and better prices may be looked for, but the supply of fowls appears to be short the whole country over and in most localities fewer chickens are being grown than common. With the prospect of better prices for produce, a good demand and a short supply, those who have reared good sized flocks should be able to realize fair prices that will, in a measure, compensate them for the increased cost of production. Don't be in too great a hurry to sell either fowls or chicks.

Horticulture for Poultry Keepers

Conducted by Thos. F. Rigg, Iowa Falls, Iowa.

HERE WE ARE into July, with the spring gone and the glory of that season departed. In all it was a favorable season for the gardener, the fruitman and the florist. Our flowers and shrubbery never looked better, nor has the bloom even been more satisfactory. As I write these lines I occasionally look out of the library window to a bed of Iris in bloom. It is a beautiful sight. They are deliciously fragrant and the south wind carries the perfume into my room. The flowers are large and handsome, more or less beautifully mottled in the "standards" and veined in the "falls," while the beards range from delicate primrose to orange. In colors there are the richest yellows, the most intense purples and delicate blues, the softest mauves, and very beautiful claret reds. There are also whites and primroses, and bronzes of every imaginable shade. How I do love them! The aquilegia (columbine) is also another flower of which I am very fond. It is now in full bloom and presents a sight of wonderful beauty. More and more I am planting hardy sorts of flowering plants and the perennials. They are so very satisfactory.

The roses! I think we never had such bloom before—but Mrs. Rigg says I make that statement every season! The cool, wet spring was particularly favorable to growth of wood and flowering buds, and I do not see how there could have been more or better bloom. An occasional spraying with arsenate of lead rids the bushes of all worms, while the Black Leaf 40 takes care of the aphids.

Everything in the garden is working over time. We never had better vegetables. The strawberries are here in full force and as usual have given us a very large crop.

The fruit trees and grape vines are doing all that they should be asked to do. The outlook for a big crop is very promising. This season the currant worms came on with a rush. I was prepared for them, having the currant and gooseberry bushes well covered with arsenate of lead. As a result every worm which came to our place is now dead and the bushes uninjured. But the worms did play havoc with most people's bushes. Just a few moments ago one man telephoned me asking what he could do to save his currant bushes, which were "just a mass of worms." I wonder why people will have fruits or flowers or garden vegetables and not learn how to properly care for them?

Out here in the mid-west we will have to get busy and wage a war on the potato bug, the mellow and cucumber aphids and other troublesome insects. There is every indication that we will escape our usual mid-season drouth. This will give us an advantage in the fight, for it means a vigorous growth of plants. We will use arsenate of lead for the potato bugs and the cucumber beetles and go after the aphids with Black

Leaf 40 and whale oil soap—and we will win the battle easily.

* * *

A correspondent wrote to the *Rural New Yorker* asking if the bleeding of grape vines by late spring pruning would injure the vines. The editor replied:

"The bleeding of grapevines has been investigated quite thoroly by several workers and the conclusions reached indicate that the loss of sap from the average seasonable pruning does not seriously interfere with the vigor of the vine. In that the annual pruning removes a large amount of the growth of previous years, the amount of plant food stored in the trunk and roots of the vine is in excess of that required to give the remaining canes a start till the roots begin to function. The material lost is largely water."

We have had some experience along this line and it does not tally with the above statement. One fall we did not get a row of Concord grapes pruned. When we returned home from Florida late in March we pruned the vines. They were very strong vines, having been in bearing for about five years. Every vine so pruned died to the ground, renewing themselves from the roots. This spring a neighbor of mine waited until late March to prune a number of Worden vines. He will have no vines above the roots in the vineyard.

* * *

I saw in the May issue of *American Poultry Journal* an article from your pen in which you say you paint your fruit trees with "Sulfocile" to prevent rabbits barking them.

Please tell me the strength you use, how you apply it, and when, and other necessary information. The rabbits have done a great deal of damage in my orchard. I, too, wrapped the trunks with newspapers, but as the most of my trees are headed low the rabbits barked some limbs above the wrapping.

I have about four hundred two-year-old apple trees, mostly Wine Sap, about fifty bearing apple trees and one hundred peach trees set out last fall as fillers in apple orchard. Kentucky. W. H. Fitzhugh.

I have a number of letters like the above from people who have had young

trees injured by rabbits. Paint the trees with sulfocile, using three parts of water to one part sulfocile. Give the trees two coats of this paint, applying the last coat about two days later. I use a paint brush, but where a very large number of trees are to be treated the sprayer can be used.

* * *

In making some improvements in our home last month, it became necessary to cut out a lilac bush which my father planted in 1858. It was one of the old fashioned kind, the old time single blue variety. During all the years it had bloomed every season. I could not do

the cutting or see the bush taken out. I thought of how that bush was planted away back in 1858, no doubt at mother's request and how she prized it, for Iowa was a vast prairie in 1858, and mother had few flowers or flowering bushes in the new home. Just as near the spot as it is possible to do it I am going to plant a bush of the same lilac, a sprout of the one we removed and maybe mother will know and understand.

* * *

I think I have gotten the best of the insect which infests the roots of the aster plants. For three years I have had none of these plants affected with insects. I have given the ground a good dressing of wood ashes and raked the ashes well into the soil before planting the asters. Then after the asters are set I give the surface of the ground another coating of ashes, leaving the ashes to leach into the ground and to be turned under by cultivation.

* * *

Yesterday a swarm of bees settled down on a rose bush not more than three or four feet from my door. The queen had become tired and being unable to go on had fallen on the bush. Of course all the bees came down with her. In a few moments I had them hived and they are very busy now arranging their new home.

* * *

I am glad we increased our plantings of currants and gooseberries. Already we have orders booked for all we can deliver. I urge all land owners who are doing anything with fruit commercially to plant as many of these bushes as they have room for.

* * *

In answer to James Reed, Keokuk, Iowa: Pear growing in Iowa has not been successful on a commercial scale on account of the fact that the blight is very prevalent in this state. I think you will find the Lincoln the most satisfactory variety you can plant for a home supply of fruit. It is as nearly blight-proof as a pear tree can be in Iowa. It is extremely hardy. I have them growing on my place that have withstood thirty-eight degrees below zero. The tree is a regular and abundant bearer and the fruit is of good quality and fine appearance. You will do far better in your pear growing on the clay hills in the vicinity of your city than we could possibly do here on the black soils of the prairie. I think the Mississippi river bluffs in Iowa, Nebraska, South Dakota and Missouri ought to be planted to hardy grapes. Some day they will be so planted.

* * *

I have four inquiries regarding the rust on string beans. Last season, owing to the rainy weather, the rust was very general in the central west and cut down the yield very materially. It can be controlled by spraying the vines with sulfocide. If the rust once strikes the plants the spraying is of no avail. The thing to do is to prevent the rust affecting the plants.

* * *

In answer to B. G. Turner, Delaware: I do not think you will be able to buy trees of the Pennock apple from any nurserymen. You can, no doubt, get budding or grafting stock from the New York State Horticultural College. Think you will make a mistake in planting any considerable number of these trees. The

Write Letters So the Customers Can Read Them

If the truth were known, more than 30% of the failure to land orders can be directly traced to a badly written long hand letter. If you are in business, be in it right, answer your inquiries by typewriter. It makes a neater letter and looks like real business.

Fifteen minutes practice each day for a week and you will be able to operate a typewriter very good.

THE ELLIOTT POULTRY FARM
R. 7, Box 87, Mansfield, Ohio

Pennock is a poor quality apple and your friend who recommends it so highly is mistaken as to its worth. This apple was first cultivated on the farm of Joseph Pennock, Delaware County, Pa. As a commercial variety it is practically worthless.

* * *

My five-year planted Wagner apple trees are loaded with fruit. I believe this variety is going to prove to be a good one as a filler in Central West orchards. The fruit is handsome and of good quality, and the tree a very young bearer.

* * *

Mrs. Sarah P. Arnold, Illinois, writes that the King birds are eating many of her bees and wants to know if these birds are eating the worker bees or the drones. I feel confident that the King birds destroy very few worker bees. I have watched very closely in my yard and have seen them catch many drones, but not the worker bees. In a booklet issued by the Department of Agriculture, U. S. Government, I find the following:

"It is popularly supposed in some sections of the country, at least, that the kingbird, or bee-marten, is the enemy of the bee-keeper. No doubt you have seen him hovering in front of a bee hive, apparently devouring as many of the honey gatherers as he could swallow. A careful investigation has been made by scientists, and out of 665 stomachs of kingbirds examined, only 22 contained the remains of bees, and of all of the bees found in these 22 stomachs, only four were workers, the others being drones. There is an insect known to bee-keepers as the robber fly, which causes much trouble among the bees. These were found in large numbers in the stomachs of the birds examined, and it is undoubtedly the robber flies that they are devouring when we see them balancing in the air in front of a hive. Nine-tenths of the king-bird's food is insects, consequently it is easily seen that great damage is done when one is killed."

* * *

There seems to be great interest in apple trees planting in the hill country of New Jersey. I have received more letters from people asking advice as to the best commercial varieties to be planted there than from any other section of the country this season. In this connection the following from H. W. Collingwood, editor *Rural New Yorker*, is of special interest:

"I have too many for best work. We have to stop and pick Wealthy, Gravenstein, Maiden Blush and others when we could be better employed at other work. McIntosh, Baldwin and Winesap make a good combination for a commercial orchard here. I have too many of the earlier varieties and too many Black Bens. That variety is an early, strong bearer and gives handsome fruit, but our customers do not want it. Northern Spy grows well here, but is a September apple—too early for the best. If I were planting over I would use 40 per cent each McIntosh and Baldwin and Winesap for most of the others. Wealthy grows well here, but is too early for best sale. Here, the best profit will come from picking McIntosh in September and Baldwin in October, and putting them in storage to be sold not before Christmas. If I were to do it all over again I would save much work in cultivation by using sweet clover—plowing every two or three years and cutting the sweet clover as a mulch. I think this is what we are to come to. Our soil is not quite moist enough for such full mulching as Mr. Hitchings gives, but the sweet clover plan seems to promise right. I should not put in peach trees as fillers, as we did on part of our orchard. These peach trees have been cut out, yet you can easily tell where they were from the shape of the apple trees. The fillers drove the apple trees too high into the air. Where there were no fillers the trees have made broad flat heads far better in every way."

Mr. Collingwood is speaking from actual experience and what he says should be considered by all New Jersey planters.

Aldrich White Orpingtons at Reduced Prices

We have the largest number of young birds this season that we have ever bred and being somewhat crowded for room, will make special prices on these birds during July.

We offer one hundred cockerels, January, February and March hatched, from our best matings, at \$5.00 and \$10.00 each, and April and May hatched cockerels at \$3.00 each; also January, February, March and April hatched pullets at \$2.00, \$3.00 and \$5.00 each, depending upon quality.

Our breeding pens are now broken up and we can furnish a limited number of high class breeders at one-half the regular price during July only.

Would advise you to book your order early if you desire birds conditioned for the early shows.

Tell us your wants and write us for prices.

Mrs. R. C. Crane, Indiana, writes that she has had trouble in getting satisfactory climbing vines in her plantings around her house and asks for a list of plants she can use on the east and north of the house and on an out-building, where the plants will be in the shade most of the time. I think she will be able to find in the following vines those which will suit her purpose:

- For shady places—Aristolochia, Siphon, Celstrus, Apios Tuberosa, Hop Vine, Akebia Vine, Honeysuckles.
- For hot sunny situations—Bignonia Radacin, Clematis Paniculata, Honeysuckles.
- For north aspect—Clematis, all large flowering types, such as C. Jackmanii, Henryi, etc., Ampelopsis Veitchii (Boston Ivy).
- For eastern aspect—Ampelopsis Engelmanni, Cinnamon Vine, Matrimony Vine.

In answer to L. M. Marks, Pennsylvania:

1. I think, beyond any question of doubt, you will find it more profitable to raise winter apples than the summer varieties.
2. You will make no mistake in planting Stayman Winesap and Delicious. Yes, I would put in a few Wealthy.
3. I never heard of the Iven apple. Regardless of what your Maine friend tells you of the remarkable behavior of his one tree of this name, I advise you not to top work your three acres of bearing Wealthys to the Iven. Secure a few scions of the Iven and work over one or two trees. You have no assurance that this variety, wholly untried except by your Maine friend, who has but the one seedling tree, will be adapted to your locality. However, do not fail to test it out. It may prove to be a very valuable apple. If it does, you will have the stock to use to top work as many trees as you desire, by doing as I advise.
4. Your plan to cultivate the young orchard for four or five years, using cover crops, and then to seed it down, cutting the grass each year and mulching the trees with it, is a good plan. However, you will get better results by cultivating the orchard annually. The trees in the sod will come into bearing earlier, and the fruit will be more highly colored. Grant Hutchins of New York, who is an advocate of the sod mulch system of orcharding, produced the apples which won for New York at the Panama-Pacific Exposition.
5. I am unable to advise you regarding the planting of a pear orchard. Consult your state authorities.
6. I am strongly opposed to the interplanting of currants and gooseberry bushes in the orchard. The currant is a harbor for the San Jose scale. Then the presence of the currant and gooseberry bushes prevents plowing and cultivating the orchard properly. The plowing and cultivating should be done two ways. This is a serious objection to the inter-cropping with other fruits.
7. Yes, by all means plant largely of currant and gooseberry. You say you are near a mining town that will take a large quantity of these fruits. You will find them very profitable. They will give you a good income until the orchard comes into bearing, and after that, too, if you will attend to them properly. I would plant only the Red Cross and Diploma.
8. Few men have made any money in producing plums. I would plant but a few plum trees. Abundance and Endicotte (Mammoth Gold) will give you good returns, as you say they are doing well on a neighbor's place.

9. I think you are right in deciding to plant but few grape vines. Unless one is located where he can dispose of the bulk of his crop to the grape juice factories there is no money in producing the common varieties of grapes. Plant a few Worden, Niagara, Moore's Eearly and Delaware, for home use.

10. The Cuthbert raspberry ought to give you the best results in reds. The best of the black caps is Cumberland.

11. Your combination of Early Elberta, Elberta, J. H. Hole and Kimmell ought to give you a home supply of peaches from early until late. I do not believe you can make a better selection.

12. You have not said one word in your letter to me about the home supply strawberry bed. Why not? You certainly will plant a strawberry bed. To not do so would be a great mistake. In fact it would amount to sinning. You must have a supply of strawberries for the family.

* * *

I was in a grocery store in my home town the other day and heard a farmer ask for canned pumpkin. That same day I saw one of our most prominent farmers buying salt pork at the meat market. Think of it! A farmer buying canned pumpkin and salt pork! I bet both of these farmers are buyers of dried apples!

* * *

C. P. Bucham takes exception to my statement that Arkansas Black and Paragon are two distinct types of apples. He says he has both growing on his Maryland farm and can see no difference in them. I feel sure that Mr. Bucham is one of the many planters who were given Arkansas Black trees when he thought he was getting Paragon. Thousands of Arkansas Black trees were sold as Paragon in Virginia and Maryland a number of years ago. Arkansas Black was grown from seed planted 1833 near Rhea Mills, Arkansas. It is evident that it is a seedling of Winesap to which it bears a striking resemblance. It was propagated by nurserymen in 1868. The Paragon originated on the farm of Rankin Toole, near Fayetteville, Tenn., from a seed planted in 1839. It was introduced to the public in 1870 by a Mr. Twitney, a local nurseryman. The Paragon is an apple of high quality, better in every way than the Arkansas Black.

* * *

A few days ago I was in the orchard of an Iowa farmer. Running in the orchard were more than two hundred Brown Leghorn hens. They presented a beautiful sight. I learned that in this neighborhood there is a boom on for Brown Leghorns. A few days later I was in another county in the state and there ran into another Brown Leghorn boom. I have been wondering why the Browns did not get going again out here where egg production in farm flocks is now being considered of chief importance. I have always been an admirer of the pretty and useful Brown Leghorn and am glad to see them coming back to the farms of Iowa. Last winter at the Madison Square Garden show I had the good fortune to go down the Brown Leghorn line with William Ellery Bright and James Forsyth. The comment of these two past masters in the art of producing Brown Leghorns stirred up in me my old love for this variety of fowl.

TOM Barron's Winners

All Egg Contests Prove Them

World's Greatest Layers

Are Still at MORRIS FARM
R. 4 - Bridgeport, Conn.

I have the most Profitable Flock of Poultry in America, and you cannot afford to be without my blood.

Remember, you take my word for nothing. I state only official records made at National Laying Contests.

In Wyandottes—

\$8.69 worth of Eggs by BARON-ESS V, the 282-egg hen, at North American Contest, 1913-14. Four others laid 274, 271, 258 and 252 eggs. The five laid 1337 eggs, an average of 267, or \$8.21 per hen.

I have a flock of 27 Hens that gave net profit per hen of \$4.67. These are the three Contest Pens I bought of Barron, and which he had at Pennsylvania, Connecticut and Missouri. All my Wyandottes are bred from these.

In Leghorns—

I am breeding the Highest Pedigree Cockerels in the World, out of the 288-Hen, winner at Newport, Eng. This affords new Winning blood for the Barron breeder. Others, 284, 256, 255, etc.

In Buff Rocks—

280, 265, 263, 240, etc. I guarantee all contest birds.

All Breeders tested by Storrs' College. Free of white diarrhoea.

SPECIAL REDUCTION

May and June on pedigree chicks, also on eggs. Take advantage of this by ordering early. Half grown stock half price July and August.

fat on my sweet corn and cabbage have sent word out to their friends. Yesterday I counted five of them out in the orchard. They surely did get more of the sweet corn last year than I did, and I don't see any way to fight this increased force. But I am going to get my share of the corn this year if I have to remain in the field night and day. Life without several weeks feasting on sweet corn would be a dreary thing indeed.

* * *

The death of Major Frank Holsinger at his home in Rosedale, Kansas, a short time ago removes one of the men who have been active for better horticultural methods in the West. Major Holsinger was a successful fruit grower and was always aiding some one, and constantly engaged in spreading the gospel of the home orchard and small fruit garden.

* * *

For more than twenty years I have had each season during the fruiting period a visit with Frank P. Storm. I greatly enjoyed these visits of my friend. Mr. Storm was engaged in business and was on the road most of the time. He was an ardent lover of flowers and fruits and in his Minnesota home had a large and valuable collection of plants and vines and trees. We used to have such a good time going thru the orchard and flower garden when he came here. I was thinking of him yesterday and how I would soon see him, when the postman came with the mail. I saw in the lot of letters one which I supposed was from him and that it would tell me he would soon pay me the annual visit. I opened the letter and read that Mr. Storm had died two days before. It was a shock to me. I shall greatly miss him.

Chick Foods.

A GOOD first food is a mixture of dry bread or cracker crumbs and rolled oats rubbed up crumbly with hard boiled egg.

Boiled rice, or any other cooked cereal makes excellent variety food. Raw potatoes cut in chunks for the little birds to pick at are fine food for chicks. Short sprouted oats, given in a small box so chicks can scratch them over, make first class food. Give every day and remove at night any not eaten. The leavings can be thrown to adult stock.

Boiled fresh fish, either plain or mixed with mash, makes good growing food and may be fed daily if available. A good beef scrap can be fed from the start. It should be fine ground and mixed with the dry mash. Use only first quality beef scrap.

Granulated charcoal should be kept before the chicks at all times, so should chick-size crushed oyster shells. Renew sand on floors regularly.

A good home-made chick food can be ground in any hand or power grinding mill. Mix sound hard corn, 10 lbs.; wheat, 10 lbs.; heavy white oats, 5 lbs.; heavy bright barley, 5 lbs., and grind all these together so that the coarse particles are about the size of commercial chick food. Add to this about 5 lbs. of rolled oats and a little fine oyster shell and charcoal.

The meal can be sifted out of above chick food by placing a chute of fly-netting on spout of mill, having a box for chick food at end of chute and a larger box under chute to catch the meal. This meal mixed with an equal measure of

good wheat bran, to which is added about 5% of either fish scrap or beef scrap of good quality, makes a splendid dry mash for small chicks.

Chick should be fed often at first, but when well started three feedings a day are sufficient. By tenth day begin to work them gradually on to coarser ground food. By the time they are three or four weeks old they can take same ration as laying hens.

Keep Them in Condition!

To get a maximum egg yield next fall and winter your birds must be kept in the pink of condition from hatching to maturity. It has been proven that the feeding of Mustard to poultry promotes an increased egg production, and is also permanently beneficial to their health, vigor and stamina. **French's Poultry Mustard** is the original Poultry Mustard in America, pure and of great strength, hence only a small quantity is required for each fowl. The best results are obtained from its continuous use. Prepare your birds now for more eggs next winter. Booklet free.

The R. T. French Company
Department A - Rochester, N. Y.

Buy at 20 Cents. Eat when 40 Cents.

A fresh egg, rubbed or coated with **Egg-O-Latum** and stood on end in any place under 70 degrees, is protected from air, moisture, odors, germs and decay and remains fresh until used, whether a week, a month or a year. Costs but one cent per dozen. No apparatus or special containers or packing. Always ready for use.

Eggs double in price in winter. A 100 per cent profit is sure. The eggs retain their natural color, flavor and freshness. The coating does not discolor the egg or show when wiped off. Boiling entirely removes the coating. **Egg-O-Latum** is odorless, tasteless, snow white in color, and non-poisonous. It is air proof, moisture proof, odor proof and germ proof. Economical for regular summer use. Eggs rapidly become stale in warm weather, but, if rubbed with **Egg-O-Latum**, are just as fresh after a week or a month or until used.

Price per jar 50 cents postpaid, or at dealers.
Sufficient for 50 dozen eggs

MRS. TELL E. WATTS

WEST CONCORD, MINNESOTA

Questions and Answers

Conducted by
Prince F. Woods, M. D.

Egg Cartons.

Q. Please let me know where you buy your egg cartons that are mentioned as used by The Anchorage Farm, Onarga, Ills.

J. W. J.

A. If you will look thru the advertisements you will find that cartons may be obtained of a considerable number of paper box manufacturers. We use a good heavy grade of 2x6 egg carton with our farm label thereon. The 2x6 cartons fit best into market egg cases, but it is wise to buy only good quality, heavy weight, strong cartons.

Fish for Poultry.

Q. I live by the Calumet river and I am able to catch plenty of fish, but do not know how to prepare them for poultry. My father used to say that raw fish would make hens broody, so I wish to cook them. Please tell how to cook and prepare fish for feeding chicks and laying hens.

South Holland, Ills.

W. L.

A. We feed the fish when fresh caught. Usually put the catch into a galvanized iron pail and pour scalding water over them and let stand until cool. Then feed the chicks all they will clean up quickly. Feed them just as they are without preparation. For laying fowl we boil the fish and usually mix the whole mass with ground grain mash mixture into a crumbly mash. If the fish are very fat we allow the boiled fish stew to cool and skim off the fat and oil and then heat again before mixing with mash. When using such fish mash for stock birds from which eggs are used only for hatching or for growing chickens we do not bother to skim off the fat. Only remove the fat from stews used for flocks producing table eggs, as much fish oil is liable to give a fishy taste to the eggs.

Separation of Flocks.

Q. I first began to raise fancy poultry a year ago. Now I have two breeds, S. C. Buff Leghorns and Lakenvelders. Please let me know whether or not I can safely allow both breeds to run together until January, when I intend to separate the flocks for mating. I want to give them all free range. Would there be danger of impairment of true colors of the breeds by letting them run together in this manner? How long should they be separated before breeding time?

Kansasville, Wis.

P. R. S.

A. We do not believe that there is any danger of contamination thru letting them enjoy free range together, if you separate the flocks long enough before breeding. Would want to mate up the flocks for six weeks or so before using eggs for hatching. However, we do not think it advisable to let the pullets and cockerels run together on the same range, as the males will worry the

females altogether too much for best results.

Noisy Cackling at Daybreak.

Q. I have a flock of 45 White Orpingtons in a comfortable open front house. For some unknown reason they begin cackling at daybreak, a cackle that seems to indicate fright, and keep it up until one speaks to them, when they quiet down. Of course, if this continues, as we live in the city, we will have to dispose of the flock as they awaken the whole neighborhood. Can you suggest the cause and a remedy? This has just developed within the last few weeks. This morning at 4 o'clock we let them out in the yard and that seemed to stop the noise. We have no male with these birds and so do not have the annoyance of crowing with the cackling. I certainly do not want to dispose

of this flock, but will have to if the cackling continues.

La Salle, Ills.

M. B. B.

The noisy cackling at dawn is a pretty certain indication that the birds have been disturbed and frightened. Trouble is probably due to rats in the poultry house. We had several flocks that began that noisy daybreak cackling in June—although we had cleaned out the rats early in spring. On the first rainy day we organized a rat hunt, having the earth floors dug up under sills and using our Airedale terrier, "Shag" to do the rat catching. Out of ten houses we took a kill of over 200 rats of all sizes, from new born to adult. In one house there were killed, fifty rats. Most of our houses are in the woods and rats are very troublesome. In one house where cackling was most noisy and continued at intervals through the day, the dog caught

two very large gray squirrels. Since the day of the "great kill" the daybreak cackling has ceased. When it starts again we shall have another rat hunt. As you are in city it is probable that rats are the cause of your trouble. If, after hunting out the rodents, you still find the flock noisy in morning, would leave the door to yard open so that the birds can get out of doors as soon as it is daylight.

Chicken Troubles.

Q. I have about 100 chicks three and four months old that are not doing well. They get sick and die, usually in a day or two. Their crops are usually empty but sometimes have a hard caked substance in them. I feed according to the Cornell formula, with the exception that I feed buttermilk instead of beefscrap. I keep the buttermilk before them at all times as a drink and sometimes mix their mash with it. This milk is not always very fresh, however, and thought that might be the cause of my trouble. I keep their brooders clean and plenty of fresh water before them. Have a brooder house 60 feet long and have it divided into several pens. I keep the windows all open in the front of the house at all times so as to give them plenty of fresh air. These chicks were hatched in incubators and seemed to be healthy the first week or two. They have free access to a grass range at all times.

Dallas City, Ills.

H. G. D.

A. Faulty feeding and care is probably cause of trouble. Stale buttermilk may be starting point of indigestion and malnutrition. Would stop all food for twenty-four hours and give only scalded sweet milk to which has been added enough well-boiled bread flour to make it the consistency of heavy cream. This should be lightly seasoned with grated nutmeg and a very little salt. Give what they will take freely every four hours. As appetites improve return gradually to granulated chick food and give them a box of short sprouted oats to scratch over daily—feed sparingly. Do not give any moist mash until they show considerable improvement. Be sure that any mash fed is removed as soon as they have had a fairly good meal. Do not leave wet mash about to sour, as sour mash will cause serious trouble. Do not leave wilted oat sprouts before them.

Beginner's Business.

Q. (1) Early this spring I purchased a \$30 mated pen of White Orpingtons. In the fall I expect to have 25 or 30 cockerels and a few pullets for sale; which I hope will be worth from \$3 to \$10 each. Will there be any difficulty in disposing of these because of their being too young, as they will be late hatched, April, May and June? Which would be the best way to go about selling them? Is it possible for a beginner to ask and receive these prices?

A. (1) As you lack experience in selection of specimens, it is not likely that customers will want to purchase on your personal selection and price of stock. Get some experienced breeder or judge of White Orpingtons to go over your flock in the early fall and appraise them for selling value, leg band them and then keep a careful record of the appraisal. Advertise them, stating the facts, and you should be able to dispose of the birds to good advantage.

Hot Weather Stunts the Growth of Chicks

You know, early hatched chicks when matured have greater vitality and naturally lay more eggs than those that spend the developing period of their lives in the heat of summer.

Early hatched birds are matured when cold weather comes and they lay when the price of eggs is high. With a 1200-egg capacity or larger Candee Incubator, you will be able to hatch all your chicks early and will make more profit from your poultry.

**Hatch All Your Chicks Early
Next Season with a**

Automatic, Sectional, Hot-Water Incubator

Eggs Always Safe

You will be sure to hatch the largest possible number of good chicks with the Candee, because in this incubator the eggs cannot overheat. There is a regulator at each 300-egg compartment that stops the flow of hot water into the compartment when the temperature is right.

And there is also an automatic regulator at the heater that controls the draft and the fire, giving double protection against overheating.

Egg Trays Stationary

Because there is an automatic regulator at each compartment, it is *not* necessary to move the trays of the Candee up and down to give the eggs the correct heat. You need not be there to lower the trays should the temperature rise for any reason. The trays of the Candee always remain stationary.

You can start a hatch with 75 eggs in a Candee Incubator, and this hatch will not interfere with any other eggs or the operation of any other compartment, because each compartment has its own automatic regulator.

Install It Yourself

Because the Candee comes to you all-built in 600-egg sections, you do not need expert mechanics from the factory to install it. You save this expense because you can easily and quickly set up the Candee on its legs yourself.

And because it is sectional in construction and operation, you can add to your first Candee anytime without disturbing your first installation.

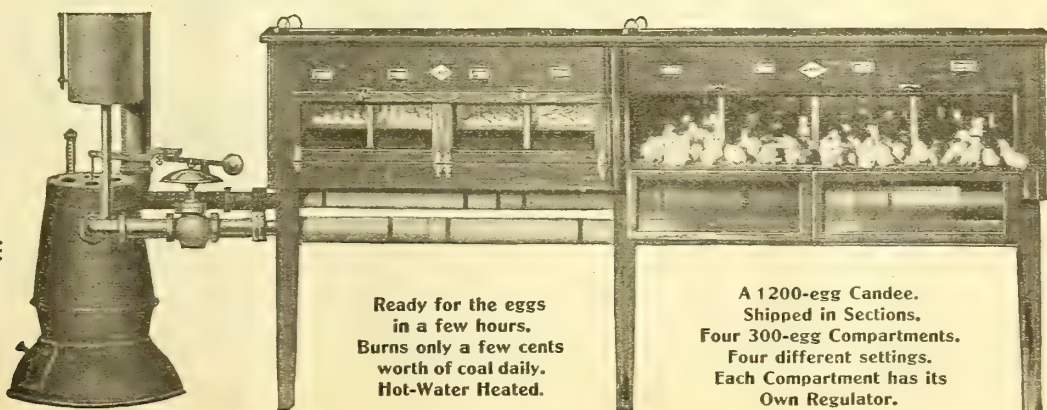

Not An Experiment

The Candee principles are covered by broad patents, which principles are unchanged after years of use on thousands of poultry plants and by all of the prominent Colleges and State Experiment Stations.

Candee equipment is sold on a broad proposition "Write Your Own Money-Back Guarantee and Attach It To Your Order."

Write now for your copy of the big free catalog, which contains pictures of the Candee-equipped plants in every part of the country, and of the Colleges and State Experiment Stations that use the Candee. Building plans, drawn to scale, furnished free upon request.

Q. (2) I have often heard of people buying eight or nine hundred baby chicks and later on selling them as broilers. Would it be possible for a person to buy the same number of good pedigreed stock and later on sell them at fancy prices? What time of the year would be the best buying and selling time? Edgerton, Wis. S. F. S.

A. (3) Fancy prices depend upon the record of the strain and the reputation of the breeder. We hardly think that such a plan would pay you, as you would first have to establish your reputation as a skilled breeder and grower of high class stock. You could, of course, employ a judge to appraise your chickens when grown, but as first-class, salable, high-priced specimens are not commonly produced in large numbers from purchase of either hatching eggs or day-old chicks, you would be taking a long chance. It takes skill and experience to grow quality chickens to sell at fancy prices. Better stick to your mated breeding stock until you have more experience.

Beginner's Questions.

Q. (1) What is meant by "the Horgan system" and is it any good?

A. (1) It is a system of selecting the layers and best producers in a flock and published under copyright. We are not in a position to comment on its merits. Certain methods of selecting layers by physical characters have been in use for a long time and when applied by those who are skilled and experienced observers, it is possible to cull a flock in a very satisfactory manner.

Q. (2) What is meaning of "cock-erel bred female" and "pullet bred male?"

A. (2) They are terms employed when referring to "double matings." In "double matings" two families or special matings are required to get exhibition quality in males and females of the same variety. These family lines are not crossed but are kept practically as two breeds within a breed,—one line to produce exhibition males and another to produce exhibition females. A "cock-erel bred female" is a female from the family line used to produce exhibition cockerels. A "pullet bred male" is a male from the family used to produce exhibition pullets. Such specimens differ in certain characters from the standard description for exhibition birds. Attend the shows where such specimens are given classes and compare them with the regular Standard classes.

Q. (3) What is the difference between "Standardbred," "Thorobred" and "Purebred?" Sagle, Idaho. H. C. H.

A. (3) The terms are generally used interchangeably by poultrymen. "Standardbred" as used by poultrymen, refers to poultry bred according to the recognized Standard of Perfection, published by the American Poultry Association; altho, of course, stock bred to any breeders' standard might be spoken of as standardbred or bred to a standard. A "thorobred" is one having an ancestry from noted stock of which record is kept in a stud-book. "Purebred" means practically the same thing or bred from pure stock that has been kept pure blood by constant inbreeding of the same family lines for many generations.

Told Under Oath!

The letters in this remarkable book are backed by affidavit. They show why over 2000 dealers and half a million users recommend this machine. The

standard for 25 years. Built UP to a standard, not DOWN to a price. Built by experienced incubator makers. It saves you loss from wasted eggs because the

BUCKEYE The Best Incubator Made

is guaranteed to hatch every hatchable egg. Try the Buckeye in the same room with any other and if it doesn't hatch more chicks and better chicks the very first

time we'll take it back.

You can't be too careful in selecting an incubator. Eggs cost the same regardless of the hatching method. If you use a hatcher that has been proved reliable your losses are reduced to practically nothing.

Standard Colony Brooder

Burns 24 hours at one coaling. Broods 100 to 1500 chicks—52-inch hover. Guaranteed superior to any other brooder regardless of price. A 30-day trial. Money-back guarantee.

Adult Ration for Growing Chicks.

Q. How soon can growing chicks be put on the same food ration as adult stock?

Seattle, Wash.

J. C. B.

A. When one month to six weeks old they can usually take the same mash as laying fowls and at two months old can have same scratch grain. If regular feedings are given, give two feeds of scratch grain and one of mash daily. If dry mash is kept before them all the time give scratch grain in light feedings at morning and noon, and a full feed at night. If range is a good one, with mash before them they may not need the grain at noon.

Mating Blue Varieties.

Q. I have your 1915 Year Book. On page 77 Haldie Nicholson tells the origin and history of Blue Orpingtons and how to mate off-colored birds so as to get Standard colored offspring. Would it be possible to get the same results from Blue Andalusians?

A. We believe that the same principles will apply with all blue varieties.

Jerky Walk.

Q. (1) The cock is about three years old and appears to be in good health, except that he has something the matter with one of his legs. Whenever he walks or runs he sometimes falls over and seems to be weak in the legs. He walks with a sort of jerky motion and raises his legs up high before putting his feet down. I have only had him a short while, and the man I got him from had him confined for quite a while.

A. (1) Examine front of hock joint, just under feathers. You will probably find same inflamed and perhaps ulcerated. Wash with soapy water and apply unguentine—this ointment can be obtained at any pharmacy. Cleanse and dress daily until cured.

Q. (2) The cockerel I raised myself. He has his right wing curled under. It seems to have been hurt when he was very young. The trouble seems to be in the bone and I am afraid that his wing will always be that way.

A. (2) Deformity may result of injury to be hereditary.

Q. (3) What I would like to know is, whether it would be all right to breed with these birds. Both are pretty good specimens, and if would not affect the young I would like to use them this fall and spring.

M. J. R.

A. (3) If cock bird responds readily to treatment and recovers, it will be well enough to breed him. We would not want to breed the cockerel.

Kerosene for Lice.

Q. (1) Does it in any way injure chickens to put kerosene oil on them to kill lice?

A. (1) Kerosene oil will blister the skin of fowls. Do not use it on either fowls or chicks.

Q. (2) Does it result in injury to the hens to have male run with them the year around? Especially when hens are kept in small enclosure. Should the male be taken away when eggs are no longer needed for hatching?

A. (2) While it is better to give the females a rest from the males when thru breeding for the season, it does not necessarily result in injury to permit males to run with flock the year around. Would not pen a male bird up for a long time alone or without females.

Q. (3) Will hens lay as well during fall and winter when they have no male with them as when male is running with flock?

Lexington, Tenn.

S. B. S.

A. (3) Yes.

Poor Beef Scrap.

Q. Am sending you enclosed a sample of beef scrap. Would you advise me to buy this sort and would it be good for both chickens and adult stock?

Toomsba, Tenn.

E. H. S.

A. We would not use it. The sample looks and smells more like a fertilizer than a scrap for poultry feeding.

You Can Earn \$250 A MONTH With This NEW MACHINE

Many are doing \$3,000 a year and better with this new machine. You can too. You need no experience. We teach you FREE in one simple lesson. Start right at home. Everywhere there's plenty of money and big cash profits waiting for ambitious men.

Home and the Table

Good Things for Everybody

Helen F. Woods
Editor

EVERY MAN AND WOMAN in the United States should read Dr. Frank Crane's "War and World Government." It is a book destined to awaken people to a realization of the futility and waste of war and the best means of preventing it.

Dr. Crane is a master of clear thinking and lucid expression. No book has appeared for many years so fruitful of world betterment. It should become a text book in the schools and colleges throughout the land, and no worthy citizen should fail to give it a careful reading.

"War and World Government" is at least half a century ahead of the times. It is forceful and illuminating from cover to cover and more interesting than a "best seller." Read it yourself. Interest your children to read it. Loan it to your friends. It is a book that will live and play an important part in history making. I would like to see it placed in every library and school throughout the country and on the reading table of every home. Dr. Crane brings his readers to a plain realization of the necessity of Nations being governed by the same high code of honor demanded of individuals. If his book were read by the thinking people of the world there would be no more war. His method for war prevention is sane—plain common sense. And the workers—the wealth producers—of the earth do not have to be taxed to the last cent to carry his plan into effect. Read the book and think it over.

The following are a few pithy quotations from it:

"No two nations would go to war if the interests of the people were considered. . . ."

**Old Dutch
Cleanser**
Chases Dirt

The people have nothing to gain and everything to lose by great armies and navies, whether maintained in the idleness of peace or in the destructiveness of hostilities."

"A cause (of the present war) still deeper and more real is the fact that millions of men are kept under arms, drilled, impregnated with notions of military glory, and hence welcoming any war as an outlet for their enthusiasm and an opportunity for advancement. The greatest cause for war is military preparedness. When a nation spends millions of dollars for fireworks, sooner or later they want to see them fired off."

"National vanity and touchiness, truculency, and war preparedness are as terribly destructive and idiotic in a state as vanity, bullying, and boasting are vicious in a boy."

Mrs. Woods, associate editor of American Poultry Journal, weeding one of her flower gardens. The Anchorage Farm, Silver Lake, Mass. June, 1916.

"Peace is essential to progress, war means the triumph of the moss back."

"Pride, mediaevalism, autocracy and militarism are not mere picturesque stupidity; they contain in themselves the seeds of the destruction of the world."

"No permanent peace is possible by preponderance of arms."

"There are two kinds of cowardice—physical and moral. The nations are physically brave—that is, they are willing to starve and to

die and to fight, which is the dog or cat level of courage. But morally or humanly, they are cowards. They dare not trust each other. They dare not settle their differences by law."

"What we need is that the earth's people get together by intelligence, humanity and mutual benefit and establish a new precedent. What we need is to consider the people—all the people—and to send the interests of dynasties and the 'honor' of nations to the scrap heap."

"The world has been shown that heavy armaments cannot insure peace."

"The opposite to war, is not peace. It is federation. War is barbaric craziness; federation is civilized intelligence."

"No war should be declared except by a vote of the whole people."

"Personal self-respect does not imply that a man carry a rifle in the streets to secure justice for himself. National self-respect does not imply that each nation be so armed as to be ready to right its own wrongs. There can be no intelligent, wholesome patriotism until we get rid of militarism."

"I contend that the policy of 'force behind righteousness' has caused all the deviltry of nations for the simple reason that each nation easily persuades itself that it is the righteous one."

"Europe has . . . defended its 'honor,' it has worshipped the 'big stick,' and it is now hellbent for bankruptcy, slaughtering its sons in Berserker madness."

"No sum of money in too great to spend in making Japan, Mexico, and all other countries feel that this vast democracy of free people is friendly and not suspicious, that we are generous and unafraid."

"What is vice and weakness in one man cannot become a glory in any multiple of men."

"If possible, we would like our nation to conduct itself as decently as we expect our children to conduct themselves. And in international relations one ounce of gentlemanly courtesy, forbearance, patience, and civil words it better than tons of chip-on-the-shoulder bellicosity."

"A vain individual is disgusting enough, but a vain nation is a hundred million times worse."

"Provincial people are the best haters."

"Nothing will be settled by the gun war except which nation has the most guns and men, and for that what do the people care?"

"Let us look at facts. Armament of each nation never has secured peace. Inexorable logic says that it never will."

"The policy of military preparedness some desire to force on us is not new. It has been tried pretty consistently some 6000 years. It smashed eventually Egypt, Greece, Rome, Spain, and France as world empires. * * * The nation whose ambition is to be feared invites its own destruction."

* * *

A SAVORY DAINTY FOR FAMILY SUPPER.

By Clara Hersom Weeks.

After the mid-day meal, put one cup of fine seeded raisins and two cups of cold water in an enamel stew-pan, cover and place over the fire to simmer slowly for three hours, or more. The fruit will become plump and tender and the juice will be clear and fragrant as wine. One-half hour before serving time heat in double-boiler one quart of fresh milk; when about to boil, thicken with the yolks of two well-beaten eggs to which half a cup of cold milk has been added, and allow but a moment's boiling. Remove from the fire and add the raisins and their juice. Pour all into a hot tureen, placing bits of butter over the top; also a generous sprinkling of nutmeg. Carry steaming to the table, and serve in small bowls with crisp unsweetened crackers. Very nutritious.

SMITH'S SINGLE COMB BUFF LEGHORNS

The largest breeder of Buffs in the world. I have no other breeds. Eggs ½ price in June, July and August. Fine breeders from best bred-to-lay stock as low as \$1.25 each in June and July.

THE FAVORITE BAND Made of heavy aluminum with smooth edges, Large raised numbers, locks with double clinches. Prices same as The Capital.

CHAS. L. STILES

232 N. Third St. COLUMBUS, OHIO

OLD FASHIONED GRAHAM BREAD.

½ yeast cake softened in ½ cup lukewarm water, 2 tablespoons butter melted in 1 scant cup scalded milk, ½ cup molasses, 1 teaspoon salt, 2½ cups graham flour, 1½ cups white bread flour.

Put the two kinds of flour and the salt in the mixing bowl. Add the molasses, dissolved yeast and cooled scalded milk. Mix thoroly. The dough will not be firm enough to knead. Cover well and allow to rise over night. In the morning, stir well, turning over and over and place in two small buttered bread pans. Smooth with a knife or spoon and allow to rise about double in bulk. Spread with melted butter and bake in a medium hot oven.

MOTHER'S HARVEST GINGER DRINK.

By Clara Hersom Weeks.

Beat one egg well, add one scant tablespoon of ginger and three tablespoons of sugar. Stir until perfectly smooth and add one quart of very cold water. When sugar is dissolved add one-half pint of vinegar, using according to its strength, only enough being needed to give the drink piquancy.

Eggs.

"Queen Elizabeth" is the inappropriate name of a Minorca hen, for which it is claimed that she has laid 343 eggs in 343 consecutive days.

If time proves that this feathered biped transmits her productive ability to her descendants, she will have been of greater real value to a world that is now paying 60 cents a dozen for eggs than was the monarch who is honored by having this queen of poultry named after her.

The Department of Agriculture says the American hen now lays in a single year \$307,000,000 worth of eggs, tho the average per fowl is much less than a third of "Queen Elizabeth's" record.

After all, eggs are more essential to humanity than crowned heads.—*Boston Post.*

Monmouth Farms Change Owners.

The poultry fraternity will be interested in learning that these famous farms have passed into the possession of J. J. and Thomas J. Watts, of Lexington, Kentucky. The Watts brothers are widely known as breeders of trotting horses. John Lockwood, the present efficient superintendent, will remain in active management of the plant. Extensive improvements are planned.

Sharpsburg, Pa., April 10, 1916.

American Poultry Journal,
542 So. Dearborn St.,
Chicago, Ill.

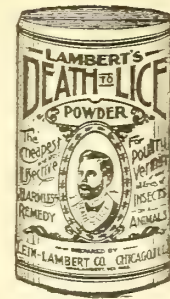

Gentlemen:

Herewith check to cover the ad that I'm carrying in your journal. Have received 21 inquiries for stock and eggs to date and all the credit goes to the American Poultry Journal, as your journal is the only one that I have an ad in.

I think the pulling power of your paper remarkable, as I only started to advertise with you in the April issue, this is only the 10th of the month and 21 inquiries is the result, an average of over two per day. I guess that's going some.

With best wishes for your success,
I am,

Yours very truly,
(Signed) J. G. SPENCER.

Coupon for Big Trial Size

Klein-Lambert Co.,

Makes 'Em Turn up Their Toes Mighty Quick

There isn't a ghost of a show for lice and mites on hens, chicks or nests after a dust with the old reliable Lambert's Death to Lice. It knocks 'em stiff in a jiff. As one of the big successful poultrymen wrote us, "It is impossible to get along without your louse killer," so it is with every user. There's nothing so efficient.

Don't Experiment

Follow the example of the leaders—ask any successful poultryman which lice killer has been the standard for 30 years—which is acknowledged BEST. He will tell you to

Get

Lambert's

OLD
RELIABLE

DEATH

TO
LICE

because he
has found
it **always**
the **BEST.**

Don't expect to make your hens pay and permit lice to worry and annoy them. The lice will get the profit and often the hens and chicks, too. A few cents invested in Death to Lice will bring dollars in profit. Just the thing for layers, sitters, and exhibition stock. Will not injure eggs, chicks or hens or soil plumage. Get a 5 oz. 10c box at dealers to try (or send to us direct if he can't supply you). Other sizes 25c, 50c and \$1.00. Lambert's Latest copy of "POCKET BOOK OF POINTERS," a valuable book for poultry raisers. Mailed for 2c stamp.

Readers Experience Department

Open-Front Housing.

THE article "Cheerful Places for Fowls" in the AMERICAN POULTRY JOURNAL for May is very interesting to me and I am writing to give some experience I have had with the monitor type of house here in Tennessee.

I noticed your article dealt only with the use of the house in the colder climates, but I have found that this type of house does wonderfully well and can be used in a variety of ways in our southern climate.

I experimented with a number of houses, but when I read of the monitor type and saw descriptions of it, it seemed to be the most sensible, combining science and practicability. I built a small one about 12x15, and after using it for three years the satisfaction and service it has given me strengthens my belief that it is the only type of house for all climates.

I built the house with front and upper monitor windows entirely open; however, I supplied canvas frames for the upper windows for severe weather. I found that the canvas did not fill all the needs, because here in the East Tennessee mountains we generally have about ten days of severe weather in the winter, when it is best to keep the birds in the house. The canvas keeps the house warm all right, but it does not let in the light that is needed when the birds are shut in. When I build other houses I will supply both the glass and canvas for the upper windows, then I am sure the house could not be beat.

In my opinion the monitor type of house has several advantages. The construction of it is more economical than most houses, as you get the same floor space with about two-thirds as much wall space. Its adaptability also appeals to me. I have used it for an incubator

house, a brooder house, for young stock on the range and for housing breeders, both summer and winter, and it has given the best of service for all uses.

Birds in a house of this type are really, as you say, always healthy and cheerful in any kind of weather. I noticed especially how cool and comfortable the house I spoke of was during the hot summer months, as with the front and upper windows open a continual draft was forced thru which cooled it most effectually.

I think that southern breeders should give the monitor a trial and if they receive the satisfaction from one that I have I am sure they will continue to use them.

I know of only few breeders in the south who use this type of house, but if you know of any I wish you would put me in touch with them, as I am particularly interested in southern breeders and their methods.

Perhaps you know that Morristown is the largest poultry center in the south and that the Board of Trade of Morristown is particularly interested in Morristown's poultry industries.

We have recently formed a Junior Board of Trade and one of our plans is to further the organization of county boys' and girls' poultry clubs. If we should do this, I intend to introduce the monitor type of houses to the young poultry breeders of this section.

ROBERT TOPPING, Pres.,
Morristown, Tenn. Junior Bd. of Tr.

White Orpingtons in Texas.

The White Orpington breeder, in my opinion, is entirely too silent. Perhaps he has all the business he cares for, but nevertheless he should let others know what he has, so that he may enjoy the prosperity that is to be had in raising this breed. There is no breed in existence today that demands the prices as do the White Orpingtons. Why is this? Simply because the demand is greater than the supply and the breeders deem it not necessary for extensive advertising.

Dear reader, you most likely are now raising some breed of poultry, or contemplating such, and I ask the question, "Why are you breeding that particular breed?" Simply because in them you see the particular fancy which you most desire, whether it be for the novelty of the breed, its beauty, its high egg productiveness or its ability to develop into a table fowl in the least possible time. But today the poultryman is striving to select a breed in which all these particular characteristics are so blended that he has a general purpose fowl which is the most popular and profitable fowl one can raise.

In the S. C. White Orpington we have a breed that is a leader in every branch of the industry. First let us look at the beauty of these snow white pets, which

I. PUTNAM, Route 705 ELMIRA, N. Y.

I term them, they being the most docile of any breed in existence. My yards are of 4-foot fencing and our flower beds are protected by 2-foot fencing, and we have yet to find an Orpington which refuses to be contented within these confines. Their large round symmetrical bodies carried so stately and proudly on their white legs, their medium size single comb adds a particular fancy not to be had in any other variety. In the show room there is no breed which attracts more attention than does the White Orpington, and they are conceded by all breeders as being one of the most beautiful breeds to meet with popular favor. And you can't get away from them going or coming, in the show room, or breeding pen. On the lawn, or in the frying pan the Orpingtons are a most attractive fowl.

Perhaps you say, why breed for the beauty of the bird that you desire laying qualities, and right here is where the Orpington is dealt an unjust blow. You say they are so large that they cannot be heavy layers, and I used to be of the same opinion, until I became a breeder of them.

Trace the White Orpingtons back and you find them descendants of the world's heaviest egg producers, such as the White Leghorns and Hamburgs, and I can say that the Orpington has not fallen short of its ancestors as egg producers. My birds have proven this, as well as others, placed in competitive laying contests held thruout our country. You will always find the Orpingtons crowding the top of the column. The cold winter months (when eggs demand twice the price of spring eggs) is harvest time with this breed in the egg line.

Again you are looking for a bird for market purposes, a bird of large size, rapid growth, and meat of superior quality, a bird that can be put in the frying pan at the least possible cost. Here the Orpingtons are in a class by themselves, developing into broilers from 6 to 8 weeks and fryers at 8 to 10 weeks. I now have in my yards a brood of 20 odd chicks that were hatched January 15th and at this writing are exactly 3 months of age, the smallest weighs 2½ lbs. and others weigh 3 lbs. each.

Some breeders claim better averages than this, but I think this good, and better than can be done with any other breed.

The old adage so common with the utility breeders that you cannot unite fancy and utility successfully, I find amounts to naught when breeding White Orpingtons. For example, take my best breeding pen, which contains 8 females, 5 hens and 3 pullets, five of these birds were winners last fall at one of the largest shows in the south.

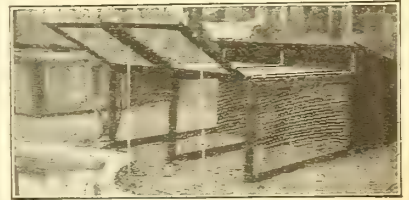

I do not trap nest my birds, as my other work requires too much of my time, but I do keep a daily record of each pen. From December 1st, 1915, to April 15th, 1916, this pen of 8 birds laid 678 eggs. I consider this an excellent record, as some of the hens were 3 and 4 years old and past their laying age.

Out of these eggs I have hatched 265 chicks, besides selling a number of settings.

The pullets I find to be extra heavy layers at an early age, for instance one pullet in the pen just mentioned was only five months old when she won first prize in the largest class of White Orpingtons ever seen in the south, weighing at the time 7 lbs., and one week

after the show she started laying and has layed continually thruout the winter and is still laying.

There are no better mothers than the Orpingtons if permitted to set, but are very easily weaned from their broody spells.

The chicks when hatched are pure white, some yellowish, and develop faster than any other breed. And when you have a matured fowl on the table, you will find it necessary to explain to the guests that it is not a turkey.

I find that the Orpington does equally as well in confined runs as an free range, and for this reason are the breed for the city fanciers.

Now size these factors all up, put them together and you have the White Orpington the general purpose fowl. We breeders know it, but don't boast of it. Breeders of other varieties know it, but won't admit it. The Orpington has gained popularity thru their own merits and not thru the efforts and extensive advertising of their breeders.

Here's hoping that this breed may enjoy the prosperity in the future as it has in the past.
Waco, Texas. A. R. GILMORE.

A Timely Letter.

Hampden-Sidney, Va., April 13, 1916.
American Poultry Journal.
Chicago, Ill.

Gentlemen:

For some months I have read in certain of the poultry journals exposes of poultrymen that presumably were not treating purchasers honestly. Of course, if a breeder is a proven swindler and scoundrel, it is the duty of a poultry journal to so inform its readers. I fear, however, that the persistency with which these relatively few cases are held up to the prospective purchaser's eyes will discourage many a would-be purchaser. The fact cannot be too strongly emphasized that the great big majority of the breeders of this country are honest, and that the cases in which the purchasers are really badly treated are dwarfed into insignificance by the cases of honest treatment—yes, I am convinced, even by the cases of generous treatment.

In the many purchases that I have made from advertisers in the poultry journals, I have ever been well treated. Will you allow me to tell your readers of my last purchase—from one of your advertisers—and the results? It puts a good taste in the mouth.

Last February I ordered from B. H. Scranton, of Rising Sun, Ind., 50 of his medium priced eggs, adding a few dollars to his price with the request that he substitute for a few of them, eggs from his better matings. The eggs came on time, 66 eggs instead of the 50 ordered, 31 of them from the better matings, and aggregating in value more than twice the amount of money sent him. The eggs after their 500-mile trip hatched almost as well as my own eggs, and the chicks have the appearance of thorobreds. I think that Mr. Scranton was over-generous; I am convinced that the average American poultry-breeder will give the purchaser a "square deal," and often a little more.

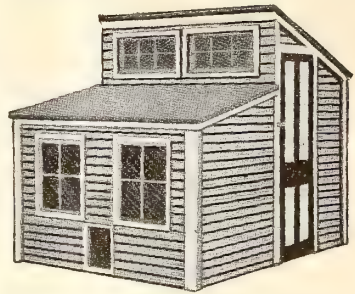

Yours very truly,

J. H. C. WINSTON.

Recent Inventions for Poultrymen

By Lester L. Sargent, Patent Attorney, Washington, D.C.

N. E. B. Talcott, Richmond, Virginia, has devised a feeder for young chickens consisting of a hopper with a V-shaped wire fabric bottom that properly supplies the feed to the substantially flat feed catching tray arranged beneath. As the feed descends in the hopper the

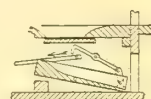

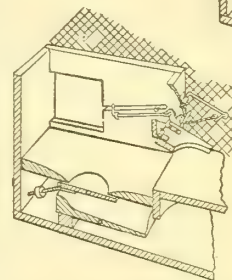

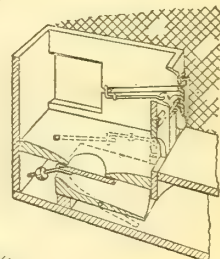

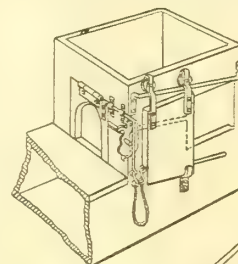

A poultry feeder, patented May 23, 1916, by N. E. B. Talcott, Richmond, Va. Patent No. 1,184,147.

inclined walls of the perforated V-shaped body portion exert a wedging effect upon the material, compressing it to a certain extent, thus preventing excessive feeding. As the chicks must reach up to peck at the feed, their heads are inclined so that there is no danger of having their bills caught in the wire mesh. The spacing of the bottom of the hopper above the feed catching tray permits the chickens to pass from one side to the other freely without danger from crowding. Patent No. 1,184,147.

Frank W. Nalley, Leaf River, Illinois, has invented a novel egg-handling device for removing eggs from one crate to another, obviating the necessity of handling the eggs one at a time and making the operation a more rapid one. The device comprises a supporting plate having a handle, depending egg-engaging fingers being arranged in the support in sets with filler-engaging fingers arranged in pairs and also depending from the support. A relatively movable slotted plate which receives the fingers and is adapted to open and close them when the plate is moved completes the device. This plate also is provided with a handle. The inner and outer handles or bails may be readily moved in opposite directions to open the resilient filler engaging fingers. A simple grasp upon the two handles with one hand operates the device. Patent No. 1,184,372.

Victor Gibson, Holbrook, New South Wales, Australia, has secured a U. S. patent, No. 1,184,341, on a poultry trap nest. The nest has a sliding entrance door, and a hinged exit door. Both doors are closed by gravity when re-

leased. A projection is provided on the entrance door and a lock for the exit door, the lock being released by engagement with the projection when the entrance door closes, the closure of the entrance door unlocking the exit door. With this arrangement, if the hen lays, she emerges into a special inclosure into which the exit door opens. If the

FISH SCRAP

is the most satisfactory animal food for poultry. High in digestible protein and bone—sweet—clean—appetizing—free from oil—uniform—economical.

Makes Hens Lay

Used in the ration at all North American Laying Competitions where world's highest official laying records have been made.

Makes Chicks Grow

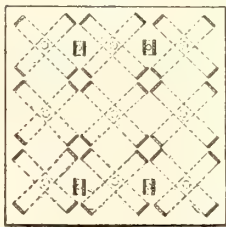

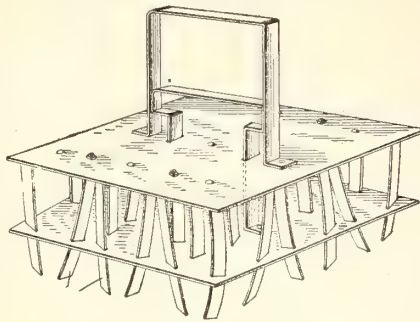

Furnishes the required muscle and bone-building materials in available form. The choice of America's most successful poultry growers.

Red Star Brand Fish Scrap is made from fresh cod and haddock and carries no oil. Be sure to get this brand. Beware of oily fish scrap which is good fertilizer but not fit for feeding. Red Star Brand is right in every respect and gives universal satisfaction.

hen fails to lay she must return by the way she entered. The weight of the egg trips a latch and this in turn causes the entrance door to close and unlocks the other or exit door. When the hen pushes the exit door wide open, its con-

An egg handling device, patented May 23, 1916, by F. W. Nalley, Leaf River, Ills. Patent No. 1,184,372.

nection with the entrance door causes the latter to open. Then the exit door closes and becomes locked and the trap is reset for the next hen without attention on the part of any attendant.

Cleveland and the American Poultry Association Convention.

AT THE invitation and under the auspices of the Cleveland Poultry Breeders' Association, assisted by the Ohio Poultry Breeders' Association, the forty-first annual convention of the American Poultry Association will be held in the City of Cleveland in the Auditorium of the Hollenden Hotel, beginning Monday, August 7th, and ending Thursday, August 10th. It is expected that an unusually large delegation will be present at the several sessions, for many important measures will come up for consideration. On account of the shortness of the session, the committee, representing the Cleveland Poultry Breeders' Association, is somewhat hampered in its endeavors to provide contemplated entertainment for the visitors without interfering, seriously, with the regular business of the Association. However, it is going ahead and will carry out everything advertised. There is so much of interest in the Sixth City to be seen by visitors within her gates, that it is difficult to arrange a program of entertainment and sight-seeing for the limited time that the Association will be in session. We believe the members will be pleased with the selection of the Hollenden Hotel as convention headquarters. This is one of the finest hostleries in the country. It is a well-appointed hotel, inviting and home-like. The moonlight ride on old Lake Erie, with music and dancing, will, we believe, prove an enjoyable occasion for all. The committee has chartered for the evening of August 10th the fine steamer Saint Ignace and hopes that all members in attendance will avail themselves of the privilege thus afforded for their enjoyment.

The visit to the mammoth store of

the May Company, Wednesday, the 8th, planned for the ladies in attendance, will be to them an occasion long to be remembered. This is one of the great stores of the country, and will compare favorably with the largest and best. The auto ride for the ladies, scheduled for the afternoon of the 10th, will be a feature of the entertainment offered by the committee. No city of equal population can boast of a finer park and is proposed to give the American Poultry Association members an opportunity to view this system and enjoy its beauties by means of the auto ride mentioned above. Members having the time and feeling so inclined will be well repaid by a visit to the Federal building, the county court-house, the new city hall, Case School of Applied Science, Western Reserve Medical College, Garfield Monument, Warrensville Farm, Euclid Beach and Luna Park. There are numerous public institutions, a visit to any one of which will well repay the visitor for the time spent. In visiting any of the places mentioned, the visitor will have no trouble if he but avail himself of the information, which will be given gladly by the Committee, as well as the advantages offered by Cleveland's splendid street car service. No city in the United States can equal, much less excel, the street car service of the Sixth City. The Committee takes this opportunity to extend a cordial invitation to all members of the American Poultry Association, and to poultrymen in general, to be present and aid in making the forty-first annual convention the most successful of any yet held.

Faultless Automatic Feeder

MONTHLY PRIZE CONTEST DEPARTMENT

The American Poultry Journal offers the following prizes monthly for the two best articles received on or before the fifteenth day of each month: For the best article, a prize of Three (\$3.00) Dollars will be awarded; for the second best article, a prize of Two (\$2.00) Dollars will be given. Articles intended for the Contest must be written on one side of the paper only and should not contain less than 1,000 nor more than 2,000 words. The articles may be written on any subject pertaining to poultry culture. We reserve the right to retain all articles submitted and to publish such as we deem worthy of space. Send all articles plainly marked to Contest Editor, American Poultry Journal, Lock Box 4, Silver Lake, Mass.

GROWING GREEN CROPS FOR POULTRY FOOD.

Do Not Allow a Blade of Grass to Wither While Your Fowls Are Standing About in a Sun-Baked Yard Suffering for a Bit of Green Food. First Prize Article in American Poultry Journal Monthly Prize Contest.

By R. L. CHAMBERLIN, Orange, Mass.

SOME KIND of green food is necessary for the health of fowls. It is an essential for the healthful rearing of chicks and only by its being supplied in some form can the poultry keeper expect to realize the greatest returns from his work with poultry. It is not too late now to make provisions for next winter's supply of green food. In planting, put in an extra supply of mangles, sugar beets and cabbage for winter feeding and there is a long list of summer greens which it will pay the poultryman to raise for his birds.

Of all the vegetables and roots fed to poultry as green food, I have found white mangles to be the best. They are sweet to the taste, delicate in flavor and can be grown in any locality where roots will thrive. No objectionable flavors are introduced either into the flesh of the fowl or the eggs as a result of liberal feeding of mangles. They are rank growers and keep well thruout the winter if protected from frost. They are easily fed and freely eaten by the fowls.

All kinds of beets, both tops and roots, are relished by fowls. We have found the best beet for poultry feeding to be Lane's Imperial sugar beet. They do not yield as heavily as mangles, but contain a large amount of sugar. I believe that raw beet may be fed too freely and result in diarrhoea and for this reason we feed them sparingly. When cooked they make a valuable addition to the ration and may thus be fed freely.

Sow both mangles and sugar beets in rows from two and one-half to three feet apart, covering the seed one inch, and making the ground firm over the seed. When about four inches high, thin to about eight inches apart. One pound of seed will give ample green food for 500 birds.

Cabbage is likewise a favorite green food for fowls, being liberally fed on many poultry plants. It is claimed by some to be too laxative but this is probably due to feeding too freely of frozen cabbage. In the fall the heads should be stored in a frost proof root cellar or buried for protection from frost. Cabbage requires a deep, rich mellow soil, plenty of manure and good culture to obtain the best heads. The young plants transplanted as late as July in rows three feet apart and two feet apart in

the row will give good results. In transplanting it is important that plants be set down to the first leaf so that the stem may not be injured, taking care not to cover the heart of the plant.

We have the best results by removing all but the two small center leaves, as they do not wilt down much in this way. Hoe every week and stir the soil deeply. As the plants advance in growth, draw a little earth about the plant until they begin to head. To prevent attacks of the cabbage fly, dust with wood ashes; for cabbage worms, sprinkle with fine salt. To prevent splitting or bursting of the heads, go occasionally over the crop and push every cabbage, that appears about matured, over sideways, which will break some of the roots and stop its growth. I have found the following varieties best for winter feeding: Livingston's Ideal Winter, Danish Ball Head, Sure Head and Flat Dutch.

For summer greens for poultry, keep growing a goodly supply of kale and Swiss chard. One-fourth pound of cabbage seed will provide sufficient green food for five hundred fowls, while a like amount of kale or Swiss chard should be plenty for five hundred chickens.

I do not consider turnips as desirable for poultry greens as beets, mangles or cabbage. When fed raw, turnips are apt to taint the flavor of eggs and they do not improve the flavor of market poultry. The rutabaga is the best variety for poultry feeding, but should not be fed to any extent. Lettuce is an excel-

lent food and quantities of it may be grown at little expense.

The tender leaves of any of the clovers and alfalfa are greatly relished by chicks or adult fowls. If the soil is adapted to the growing of alfalfa, the poultryman cannot do better than to establish a stand of this heavy yielding forage crop. Once established it will continue for many years and may be cut as high as four times in one season in some localities. However, clover is a much better crop in some sections and during the winter months clover hay makes a very fair substitute for green food for poultry. It may be used as a litter on the floor from which the fowls may help themselves or it may be cut into short pieces, placed in a pail, covered with boiling water, covered and allowed to steam for a few hours. It may then be thickened with ground grains and fed as mash.

Practically every poultryman has a garden. At least he should have, and the waste from it will prove of great value if fed to the poultry. An ideal way is to sow plentifully of those greens relished by poultry every few weeks until the middle of the summer, using the best grown vegetables for the home table and feeding liberally of the others to the fowls. But special provision should be made for winter greens by making especial plantings for poultry use. Rape and rye both make good cover crops for fall and winter feeding. They are easily grown and relished by poultry.

LAYERS or SHOW BIRDS

We can supply you birds that cannot be excelled for type, color, or as egg producers. Our birds have free range on a 300 acre orchard, meaning sturdy, vigorous fowls; 265 trap-nests in operation, so we know what these birds will do. W. H. Wyandottes and S. C. W. Leghorns. Baby Chicks and Eggs for hatching.

Strains established 1906.

LAKEWOOD FARM, HOLLAND, MICHIGAN

All waste fruit should be fed to the fowls and not allowed to rot under the trees. I have seen flocks of stunted chickens on bare, hard-baked earth yards, suffering for a bit of green food and just outside the poultry enclosure in the orchard, bushels of apples and pears rotting on the ground. And the same in the garden with lettuce going to seed, corn drying up on the stock, and countless other perfectly good food stuffs being thrown into the waste heap. If you have never tried it, friend reader,

take the suggestion now and do not allow a blade of grass to wither while your fowls stand about in a sun-baked yard suffering for a bit of green food rich in natural juices. Tender blades of grass and other fresh forage plants when fed freely to fowls or growing chicks impart new life to the flocks. There is a life principle in this kind of natural poultry food that cannot be made good by any combination of dried grains. And it is up to every poultryman to provide greens in plenty for his birds.

COMMON SENSE POULTRY FEEDING.

Second Prize Article in American Poultry Journal's Monthly Contest.

By WALTER SCOTT HOWARD,
Buzzards Bay, Mass.

IT MAY seem presumptuous on the part of anyone, at this late day, to add to the voluminous records already written in regard to the feeding of fowl. How much printed matter has been circulated broadcast, by those who know and those who think they know—their methods are infallible, to feed otherwise is to court disaster! Yet how many puzzled poultry raisers are still searching eagerly for a new formula that may bring to them results hitherto unattainable.

If the key to the situation has been solved, why this frailty among the brotherhood? Is it, in truth, that there are too many keys to open what in reality is a very simple lock? We read of a hundred different formulas, all guaranteed to make hens lay. Tomorrow, when we awaken from our dreams of hope, we will probably discover another and yet another! A drowning man will clutch at a straw—so does the sinking hen-man grasp at these sticks thrown upon the surface. Are they essential? Are they necessary? Are they worth it?

Hens lay and lay abundantly, under very simple rules of feeding—provided, you feed the hens that lay. "Balanced rations" is a very sane phrase, but it may become absolutely insane by "over-balancing!"

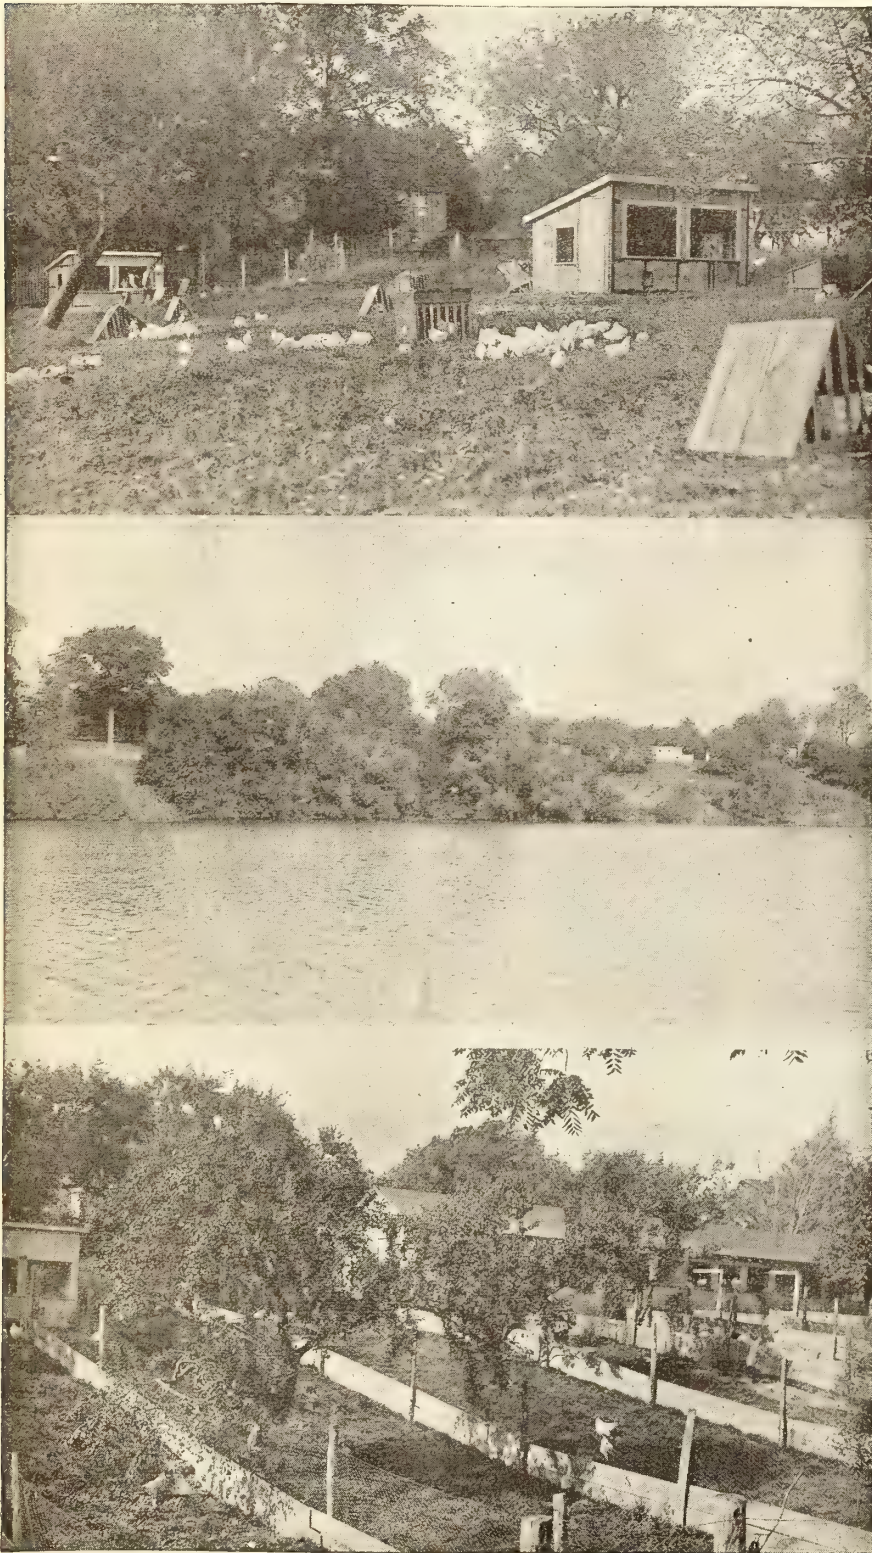

Why do the experimental stations study to add to the multiplicity of feeds, instead of endeavoring to simplify matters? It isn't "How intricate may we make the problem of feeding hens, but what may we eliminate to make the feeding less complex!" In fact, the farmer, the poultry keeper, the public, want to know, "The least variety of foods that may bring the greatest results!"

If dry mash can supplant wet mash, why go to the labor of moistening? If two or three ingredients may formulate the mash, why bother with twenty or thirty different articles? Here is an Englishman who must grind up a certain biscuit—to be weighed to a certain ounce—and fed a certain time, in a certain wet mash, with results "uncertain!" for he kills off pullets that won't lay, and his hens that do lay are no better than yours or mine, which are fed in the simplest manner we can think of.

Take the Egg Laying Contests, with a bill-of-fare to tickle the fancy of the most fastidious. With a pick of the choicest hens, handled in the most scientific manner! Does the entire flock of any one of the contests put our flocks to the blush? No! For we must get results, nearly as large as theirs, or run our poultry business close to no profits.

What is a 65 to 70 per cent egg yield in April? Normal! And to be expected when eggs retail for 22 cents a dozen. Do these contests show a 70 per cent rate in December? Never! Only a paltry 25 or 30. Just what you and I should get when eggs fetch 55 and 60 cents per dozen.

Is it the *ration* then that makes these contests so mediocre or do we handle our birds less scientifically and nature

The above views were taken on the Regal Poultry Farm of John S. Martin, breeder of White Wyandottes, Port Dover, Canada.

is kind to us? Does a pinch of salt in the mash add one more egg in the basket? Why use gluten feed? Is mid-dlings necessary when more bran may be added? Alfalfa is good for cows, they relish it. Why bulk up the hen's mash with it, when alone in a hopper the uninitiated pullets pass it by? Do you put corn meal in the mash? Why? To fatten your fowl? Probably you balance it by placing litter in the house to reduce their flesh thru exercise. Corn is an excellent food (if not abused). Why not simplify matters by serving it in the scratch grains.—either more or less!

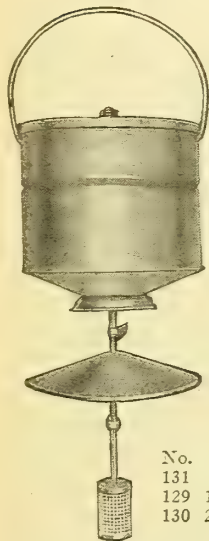

Kant-Klog Automatic Feeder

6-Quart
only

~~\$120~~

~~\$160~~

10 Quarts
The Original

The original "Kant Klog" automatic feeder; feeds anything from millet seed to whole corn, either mixed or separate. Swinging pendulum motion — absolutely adjustable — simply impossible to clog.

Birds peck at grain in bait carrier, swinging pendulum and grain drops from cup under hopper to deflector and then on ground.

This booklet contains sixteen different formulas of remedies for diseases common among fowls. It is yours free of charge. Just drop a postal with name and address to

The Licene Company
1500 Pontiac Bldg. Chicago, Ill.

Mention AMERICAN POULTRY JOURNAL when writing to advertisers.

And what are your scratch grains? The kind you may buy, already mixed, with as much per cent of unnecessary bulk as the profit you pay for? Or a choice of your own? And what may that variety be? The experimental stations advocate three: wheat, corn, oats! The majority are generous with their wheat, only liberal with their corn, and almost frugal with their oats. Why not reverse the order of things. If I had to drop any one of these three gains it would be wheat.

But then, "One man's meat is another man's poison!"—and in the gentle art of feeding hens, what I do with success, you might attempt with failure; or vice versa!

Corn is a great favorite among the farmers here. I use oats freely. A neighbor dropping in one day was amazed that I got eggs from feeding oats. He thought they stopped hens laying. Seeing my basket full of eggs, he went home and fed his flock oats. Suffice to say, that man has no use for my methods now. He knows oats stopped *his* hens laying! If we were on speaking terms today, I would advise him to begin with little chicks and feed cautiously for generations.

Why do the farmers generally have such poor returns from their hens during the winter months? Is it because they will not feed them scientifically? Perhaps, and perhaps not! The formulas from the agricultural colleges frighten them—but I believe if they fed them *humanely*, they would get eggs, provided the pullets were hatched early enough to mature before cold weather. By feeding "humanely" I mean, giving the birds what nature calls for.

A farmer living a mile from my poultry plant, requested me to look at his birds. He was getting no eggs, and he couldn't understand the reason! They were quartered in colony houses, open to the south. The floors were well littered. Boxes of bran stood in the corners and they had *all* the corn they could eat. "Why don't you let them out?" I asked. "Cause hens with wet feet won't lay!" he answered. "Do yours lay with dry feet?" I queried. He smiled wisely. "I often feed mine in a blizzard," I continued. "How much skim milk do they get?" "We sell all our milk!" "Do you give them beef scraps?" "Nope!" "My friend," I concluded, "let these birds get out there at the roots of the grass. Put a tenth portion of scraps in that bran, and when the eggs begin to come, increase the scraps to one in six!" "By gosh!" he grinned. "That's simple feeding!" I saw him the next week shoveling vigorously the snow from the front of his hen houses. The birds were about him eating the grass-roots eagerly. A month later I asked him how he fared. "Two eggs a day!" "Do you feed the scraps still?" "Don't give 'em none!" "Milk?" "Nope!" "Well, what can you expect then?" I laughed. "Don't expect nothin'!" he snapped back. "This scientific feeding is all rot. I give em more corn than they'll eat and darned if I pay out any more cash on the critters!" I left him. A bag of beef scraps stood between him and his grain bill.

Reader, it may be less that stands between you and your egg yield! Feed your birds humanely. A little judicious observation is better than a great scientific formula. Teach us the simple methods that give results. We have had enough of the intricate.

POULTRY RAISING AS A BUSINESS AND ITS POSSIBILITIES.

SHEPARD STRONG.

THE poultry business is today commanding the interest and attention of thousands of people who are anxious to know whether or not it would be a profitable business for them to engage in.

They have first become interested in poultry thru learning of the great success certain people have had in the business; then upon investigation they learn also that others have met with flat failure—have lost their time—their capital invested, as well as having irretrievably lost some other good business or position which they had given up on embarking in the poultry business. The writer has personally investigated some of these so-called failures and has found them to be due almost without exception to the following causes: Lack of personal aptitude for the business, lack of experience, lack of capital, and last, but by no means least, lack of such a systematic plan of operation as would be necessary for success in any business.

It will not be necessary to touch in this brief article upon the first three of the causes mentioned as any one of them would be cause of disaster to any line of business.

To illustrate our meaning of systematic plan of operation, we will take the case of the average man who first embarks in the poultry business with the intention of establishing an egg farm. He buys or rents a small farm and starts with we will say 100 to 200 fowls. The best authorities tell us that the yearly profit per laying hen per year under favorable circumstances averages from 80 cents to \$1.50 per year per laying hen.

Does our beginner realize to what extent he will have to increase the amount of his stock to say nothing of the buildings, yards, etc., in which to keep them in order that he may put his enterprise on a basis that will yield him an ordinary living?

Or will we take another not uncommon case—that of the man without poultry experience who decides to embark in the poultry business and produce high-class exhibition specimens of some variety in which he has the most interest. He gives up the business in which he is engaged, purchases or rents a place for his poultry enterprise, buys from 25 to 100 of the very best specimens of the variety of his choice, with the idea of exhibiting them and their offspring, winning prizes on them, acquiring a reputation for having high-class specimens and selling stock and eggs that such good qualities command. What chance has this inexperienced man to win the necessary prizes against the learned exhibitor who knows just how to put his birds into first-class show condition?

The writer knows of many instances where the trained exhibitor has sold his first prize specimen at a show to an amateur, retaining his second prize specimen himself and at another show with in the same month the experienced exhibitor has won with his second prize bird over the beginner simply because of lack of experience in handling exhibition specimens. His road certainly will be full of pitfalls, as he must know

how to raise and keep his birds, how to exhibit them, and must attain a reputation for having high-class stock, at the same time making his living.

Would it not have been better for both of our beginners—the one desiring to establish himself in the market poultry business and the other in the fancy poultry business, to have made a modest start, at the same time continuing at their regular occupations until a regular apprenticeship in the poultry business and a stock of poultry gradually developed sufficient to warrant devoting their time exclusively to the poultry business.

The poultry business today offers a greater opportunity than ever before and offers promise of an assured future to those who will combine earnest effort with careful application of business principles. There is a rapid but steady increase in the demand and market for eggs and table poultry and the supply is growing less in proportion to the demand.

As for fancy poultry, the writer remembers when \$100 was considered a high price twenty years ago for a first prize winner at Madison Square Garden, while today \$500 to \$1,000 is by no means an unusual price paid for a first prize winner at that show. Twenty years ago \$3 per setting for eggs was the standard price for the best prize strains in this country; this price has been gradually increased and today the standard price of eggs for hatching from first-class stock in the leading varieties runs from \$10 to \$15 per setting.

Almost any city, business or professional man can well envy the career of our successful poultry men—and there are thousands of them all over the country. Take, for instance, the case of the retired manufacturer who started in the fancy poultry business but a few years ago and in one year did a cash business of over \$80,000. Then there is the Long Island grower of ducks who raises and ships over 60,000 ducks to New York each year. Then there is the man who started as a farmer boy in the poultry raising business with no capital, and who annually exhibits from two to three complete collections containing some 75 varieties of fancy poultry at state and county fairs, each collection winning in cash prizes from \$100 to \$400 at separate fairs held each week from early in August to late in October; then from November until March. His services as poultry judge are in active demand at from one to two poultry shows each week. In addition to this he sells thousands of dollars worth of fancy poultry annually. He has been president of the American Poultry Association, is president of his local bank, and holds numerous other important positions—all due to poultry. Then there is the man who was formerly a life insurance agent and who has by systematic effort developed a poultry business in one variety alone to such a degree that he annually does a cash business of over \$50,000.

The history of some of the above mentioned, as well as other examples of what can be attained in the poultry business, will possibly be of interest to our readers and we are expecting to write further of the history and development of some of the leading poultry enterprises of America in subsequent issues.

Womans Success With Poultry

Helen F. Woods, Editor

SINGLE MATING FOR PARTRIDGE ROCKS.

By LUCY D. COLE, Sand Creek, Mich.

THE article in the March number of AMERICAN POULTRY JOURNAL on "The New Standard and Double Mating" has inspired the following in favor of the single mating for Partridge Rocks.

It would seem there could be no quicker or surer way of running out any variety of fowls than a close adherence to this system of double mating. It would also seem that a Standard which can only be attained by double mating must be essentially false. When an exhibition pen winning blue ribbons and cups is not a breeding pen and cannot be expected to produce good specimens of either sex, it must be a discouraging proposition to an amateur fancier to start in breeding such a variety.

In this system of double mating, a pen mated to produce exhibition males does not produce any females even approaching the Standard of Perfection and probably not a large proportion of males; and, likewise, a pullet mating while producing some Standard females will give to the breeder cockerels which are fit for market purposes only. There are two matings, fully one-half the progeny of which are culls and expected to be culls. A great many birds are thus produced by such a system that are virtually useless to the variety from the fancier's standpoint.

We have been breeding Partridge Rocks since before their admission to the Standard, and have never practiced double mating, nor had it previously been resorted to in our strain.

Last season we used in one of our low priced pens a male that was too dark for Standard color, but he had two ribbons to his credit. The mating we made would have been called good for producing pullets. We got some very nice females, one of which won first place at the State Fair and second at the Coliseum Show at Chicago. But from this mating we got no males which we wished to exhibit or use as breeders, and this one pullet was the only one which equaled those from a pen in which both parents were very near Standard. We have had pens which produced more good males than females and we concede that Partridge Rocks may be so mated by a double system to produce good females from one pen and good males from another. Our point is that by single mating a larger proportion of exhibition birds of both sexes can be produced by one pen than from two pens by double mating.

We select the male as near Standard as possible and mate him to just as even a bunch of Standard females as we can find. This last season the most of our winners were brothers and sisters. At the State Fair the first and second hens

were sisters of the first cock. At the Coliseum Show, the first and third cock were from the same pen. At the same show the first and second cockerels, and cockerel in first pen were brothers of the first and third pullet and pullet in first pen. Other winnings were made on stock from this same pen in the hands of our customers.

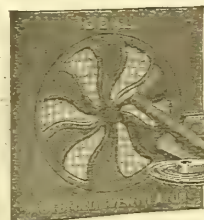

We regret that the new Standard of Perfection allows red in fluff of the Partridge Rock male, as it not only mars the beauty of the contrast of red and black, but detracts from his value as a breeder. We want at the head of our pens males free from shafting, as they will produce more show birds of both sexes than will one with shafting.

Our experience has led us to believe that color, markings and type are matters of heredity, but that foreign color, as white in plumage and purple barring in due to condition. So if one wishes to produce birds of finest quality, intelligent care in feeding and housing must be exercised. One of our customers wrote us, "What is the matter with my chicks? Half of their wings are white."

We replied, "Pull the white feathers, clean up the quarters, look out for lice and provide a good wholesome ration in plenty." This was early in the season. They followed our suggestion and by show time had some fine birds in splendid condition.

A particular point upon which I wish to take issue with the author of the above mentioned article is that a handsome appearance is incompatible with heavy egg production. Our experience has many times proved the contrary. One very fine hen, a winner several times in the show room, is at the present time one of our best layers in a flock of good layers. This year our first prize pullet at the Coliseum Show was afterward scored by a utility expert and pronounced a 220-egg type. We think it altogether probable that she will more than fulfill this prediction, as she rarely misses more than one day in six in presenting us with a nice large egg and is all the time gaining in weight, thus showing sufficient vigor to keep up the heavy laying.

We enjoy breeding beautiful birds and

FOR MOTOR CAR OWNERS

A SERIES OF ARTICLES IN NARRATIVE FORM GIVEN

Written especially for the car owner by Prof. Richard A. Leavell of Iowa State Agricultural College.

Not A Technical Treatise but a simple explanation of the working and running parts of the automobile. Written so that anyone who has ever driven a car can easily understand it.

Every Car Owner Should Have This Book

Tells about Care of Running Gear—Care and Adjustment of Brakes—Testing the Steering Gear—Lining Up the Wheels—Care and Repair of Tires—Important Points in Proper Lubrication—Starting and Lighting Systems—Care of Cooling System—Use of Ball and Roller Bearings—Types of Automobile Rear Axles—Overhauling Car for Another Year's Service.

Handy Pocket Size

Printed in large, plain, readable type. 48 pages, over 50 illustrations. Simple, clear, understandable. Enables you to obtain the maximum of service and efficiency from your car, with a minimum of trouble and expense.

What Readers Say

"I have owned an auto since 1909, bought books and auto papers, but never saw anything as good as Prof. Leavell's writings."—H. G., New York.

"Written in such a clear manner that a mere child almost can understand it."—D. B., Michigan.

"These articles are the best thing I have ever read on taking care of an automobile."—W. S. P., Illinois.

"Mighty fine stuff. The motor car has become a part of farm life."—C. A. B., Michigan.

"Very helpful to auto owners in all localities."—W. H. R., Illinois.

American Farming

is an interesting and helpful farm and home magazine. The auto series shows the broad scope of its contents. Contains the newest and best of farm reading, once a month, for the farmer, his wife, the boys and the girls. A bound volume of American Farming is a text book of modern agriculture.

OFFER Send 50c for one new or renewal 3-year subscription to American Farming (or two 1-year subscriptions at 25c each) and we will send you the Book free and postpaid. To long-term subscribers and others who want a copy, we will send the book postpaid for 25c in coin or stamps. Send early. Supply limited.

like to see them around, and we are glad that it doesn't take a homely hen to fill the egg basket, but that it has been amply demonstrated that it is possible to breed for both pleasure and profit.

AVOID BOWEL TROUBLE IN BABY CHICKS.

By MRS. DON WILLIS, Miami, Okla.

AT THIS season of the year, we hear many inquiries in regard to hatching and rearing incubator chicks. One of the most common is "How can we avoid bowel trouble?"

It is my opinion that the greater percent of bowel trouble is caused by bad air in the incubator or in the nest. Other things may cause it, but if bad eggs and bad air are allowed in the incubator for any length of time, it invariably weakens the chicks in the shells and causes bowel trouble in the youngsters.

For many years I was troubled with this scourge, especially with incubator chicks. Not being willing to believe the cause to be artificial hatching, I gave it a great deal of thought and experimented under all sorts of conditions. I noted that we were always cautioned by the manufacturers to keep the incubator clean and not to neglect to fumigate each time before re-filling the machine and the recommendation that eggs be tested out several times during the hatch. I followed these directions carefully, except that I was unable to detect a dead germ at a sufficiently early date to prevent foul air in the egg chamber. I was sure that these eggs should be removed without delay if the hatch was to be satisfactory. I tried several kinds of testers for use in a dark room by lamp light. Knowing, that where there was life there was motion, I knew there must be some way to detect the dead germ by means of a magnifying lens which would immediately show up the lifeless germ. Since then I have been using a day-light egg tester with a strong magnifying lens and have had little or no trouble with sick chicks. Any one who has not tried it would be surprised at the difference in labor and profit that a careful testing of eggs during incubation makes.

I first test the eggs with the magnifying lens before putting them in the machine or under hens, that I may be sure there are none of the eggs with faulty shells or blood spots, and also that incubation has not already been started, as is sometimes the case in the spring and summer, especially if there are many broodies about. Altho I gather all eggs daily and keep carefully I have frequently found eggs in warm weather in which incubation had already started. If these were put in the machine, they would soon rot and fill the egg chamber with foul air. These same eggs, when viewed thru an ordinary tester, look clear and would not be suspected, as the germ is not visible without the use of the lens.

Overheating is another most common fault in artificial incubating. Too much heat will kill a great many chicks in the shell and all it does not kill are weakened. The embryo chick is no stronger than its weakest point, which is its stomach, and if the chick, while yet in the shell, has been alternately chilled and "cooked," it will almost surely succumb to stomach or bowel trouble early in its career.

Most cases of overheating incubator eggs is caused by placing the thermometer on a dead egg, which is naturally

cold, thus creating the erroneous appearance of a lower temperature in the egg chamber. The blaze is then turned higher to raise the mercury, while even before it is raised the chamber may be overheated. I have many times been deceived this way until I learned to test out the infertile or cold eggs at an early date. Since adopting this method, I have greatly decreased chick mortality, as well as increasing hatch percentages.

HOW I PRODUCED AND PREPARED 1915 EXHIBITS.

This Article Was Submitted in Chiles & Co.'s Contest and Will Prove of Interest to Every Prospective Exhibitor.

By MRS. H. H. FULCHER, Pembroke, Ky.

TO BREED A SHOW BIRD in one year would be next to impossible unless the eggs, or a properly mated pen, were purchased from a breeder that was noted along that line.

the same hens and some of his daughters.

Since then I have added new blood to my lines as needed and today have a beautiful flock of Reds. But it is not a large flock, for each year I have culled until sometimes I would have only a few left.

The beginning of 1915 found me with a pen of splendid females, but no male bird suitable to mate with them, so in February I wrote to a well known Red breeder, who is also a licensed judge, telling him what I had on hand by describing both the hens and the pullets to the best of my ability—dwelling on the short comings rather than their good points so that he might be able to select a suitable bird for me.

He advised me to purchase a cock bird rather than a cockerel, stating that the cock bird would give far better results, especially as I wanted to show the progeny in the early fall shows. For the sum of ten dollars he sent me a vigorous ten and one-half pound cock bird, with very dark, rich red outer color and good under color, but with slight

termilk and bran as often as needed.

When a week old they were taken to a small colony house on range. This house had a removable floor which I kept covered with dry litter at all times, changing the litter every day if the weather was damp and the chicks had to be confined. Occasionally on good days, the floor was painted with a good disinfectant to kill off any vermin or disease germs that might be lurking about. The chicks had access at all times, after their removal to this house, to a dry mash composed chiefly of wheat bran with some low grade flour and blood meal in it and about ten per cent of cotton seed meal. Crushed bone, oyster shells, grit, charcoal and fresh water were also constantly before them. Three times daily they were fed on crushed wheat and corn until they were about the size of broilers.

When the old hen weaned them they were transferred to a larger house and taught to go up on roosts about two inches in diameter and about three feet from the floor. The house was open front type and the chicks were thus early

The Martling Hennery, Campine Farm, Ridgefield, N.J.

And even then, if it was the first experience with pure bred poultry, one would be fortunate indeed, (or shall I say unfortunate, as so many stop right here, perfectly satisfied), if a premium was awarded on the first exhibit made, as there are so many pitfalls from the shell to the show room.

Would a blue ribbon on our birds really amount to very much if we had to admit that another breeder bred and mated the birds for us? I should not consider a winning of this nature of any personal credit.

When a breeder chooses a parti-colored bird, as I have done, he has a great many more obstacles to overcome than the one who chooses a Black Langshan or any other solid colored bird. The satisfaction in accomplishing a difficult task is, however, accordingly greater.

In 1909, I purchased my first S. C. Rhode Island Red eggs from a man who claimed to have a rather noted strain of Reds. From these eggs I procured a few very good birds, and the following spring mated my best and cleanest cockerel to his sisters and the next year to

excess of black on wing markings, such as is called "pepper." This bird, he told me was line-bred by the most famous Red breeder in the east and was sure to reproduce himself in his progeny.

Two weeks after he arrived I began saving the eggs from the mating and on April twelfth took off my first flock of thirty-three beautiful Red (not yellow) little chicks. These were given to a faithful old biddy that had been dusted several times while sitting, and greased occasionally around the vent, so was free from lice and mites.

I next took a large box, covered the floor with clover leaves and placed it in our kitchen by a sunny window and here kept the chicks for a few days, or until they had learned to eat and drink and knew the call of their mother. When forty-eight hours old, they were supplied with sand to pick at and a little later wheat bran and buttermilk in self-feeders. They were also given a scant feed of hard boiled egg and bread crumbs, which they were given five times daily, keeping the sand and charcoal before them all the time, and water, but-

accustomed to fresh air quarters. The chicks grew like weeds and I raised thirty-two of them.

The Pennyroyal Fair at Hopkinsville was to be held in October, and as it

was to be only sixteen miles away, and they were members of a regular poultry association and were to have licensed judge to pass upon their birds, I decided to make my first exhibit there.

Accordingly about the middle of September, I had a large building cleaned and littered with bright wheat straw, and placed several of my best cockerels and pullets there to give a little extra feed and care.

I supplied them with a mixture of grain, in the litter; the mixture consisting of oats, corn, wheat and sunflower seed. Once a day, they were fed a wet mash composed of bran, cornmeal, a little blood meal and about ten per cent cotton seed meal. Now and then a few table scraps or lean meat cut up, was added to the mash. They seemed to relish the mash very much and it helped to plump up their bodies. Previous to this the chicks had been kept growing, but were not putting on much flesh.

Nearly every day as I went to feed them I carried my Standard of Perfection with me and examined first one and then another, comparing them to the illustrations of Reds in the Standard. Occasionally I would find one not coming up to my expectations and discard it from the flock. I also carried a piece of silk to rub down the plumage in encouragement of that lustre, so much to be desired in show specimens.

This daily handling made them very gentle and helped greatly in giving them a better appearance in the show room. Two days before the show opened, I washed their combs, beaks, wattles, feet and shanks in warm water and castile soap, using a tooth pick to remove any accumulation from beneath the scale on feet and legs. After drying, I rubbed a little sweet oil on all parts so treated, being careful not to get it on the feathers. The oil has a tendency to keep the comb and wattles soft and red, and the shanks yellow and bright.

NOW FOR THE SHOW.

My old birds were in the moult so I did not try to show any of them and it did not occur to me to show a young pen so I entered only in the pullet and cockerel classes. Imagine my surprise and delight when I found that I had received second pullet and second and third cockerel. As to the class of birds in which mine were entered, I will say that a pullet from a sitting of eggs costing \$25.00 won first prize and Chiles & Company of Mt. Sterling, Ky., got third.

Two weeks later I shipped my birds to Paducah, Ky., and received first on pullet, first on cockerel and first on pen. My first pullet at Paducah was not in the Hopkinsville exhibit, but after talking with the judge there, and taking down all notes that I could, I was better enabled to pick a winner.

Without the Standard of Perfection (regardless of what some of the old breeders say about it) I never could have achieved the little success I have in breeding S. C. Rhode Island Reds. My greatest mistake was in not subscribing for some of the good poultry journals earlier, and the judge at the show pointed out this mistake. I immediately got busy and am now receiving five monthly poultry papers—the very best of which is the AMERICAN POULTRY JOURNAL.

WHY I BREED BUTTERCUPS.

By E. H. WILLIAMS.

LURED by love of the beautiful in birds accounts for how I became interested in Buttercups. Always a fancier seeking the beautiful in form and feather, I have found great pleasure and recreation in breeding poultry. I have tried out and experimented with various breeds, and studied nearly every new one that has been a candidate for public favor, examining its credentials for recognition, to know if the new candidate can deliver the goods in the egg basket. Any breed lacking in this quality will be rejected and relegated to the rear. A bird excelling in this supreme quality will in time be found scratching in your yard.

I was first attracted to Buttercups by seeing them in a big show. In comparison with thousands of other birds I observed their neat, trim forms, golden and buff mottled with black plumage, willow green legs and red cup combs. The combination gave them a pleasing, lusty look that excited my curiosity to know something more about them. I learned of several breeders with small flocks and visited them to see the birds in their home clothes. They presented just as fine appearance as when on dress parade at the show, but this was, I found to be, a secondary quality with Buttercups according to all testimony, when their ability and disposition to produce eggs was shown up by well kept records as convincing proof. It was about this time I became satisfied of their egg producing disposition, concluding there is a great future for them. I soon bought the very best obtainable in birds and eggs from the most reliable sources and commenced breeding. In my experience they have come up to all that is claimed for them, proving steady and persistent layers of big white eggs. They are workers and good feeders, tame and gentle, but nervy and quick, as every thrifty bird should be.

I am convinced the Buttercup has the most attractive, most sought for qualities in a fowl—the combined qualities of beauty, the recognition of which is giving them a wave of popularity that will continue for years to come, creating a steadily increasing demand for good stock and superior birds, insuring highest prices to those breeders who by judicious mating can produce the finest specimens.

This is a feature calling for the fancier's skill, the most interesting and fascinating in the fancier's art. It is admitted there is considerable variation of feather and type in different strains which fact makes the field the larger to work in and the opportunity great to all in selecting and building up their flocks toward the ideal of the adopted Standard, the main points of which are pretty well established.

The future is to tell to what higher state of beauty and usefulness the Buttercup may be brought by the united and concerted action of all the breeders with the purpose, if possible to not alone sustain, but gradually improve the bird's every fine quality, keeping in the spirit, with all honesty and truth, to praise the Buttercup, the finest bird that crows, to greet the first rays of the morning sun.

SEEN AND HEARD IN THE MID-WEST.

By SHEPARD STRONG, Berea, Ohio.

The fanciers of Cleveland and vicinity are hoping for a record-breaking attendance at the American Poultry Association convention in August. They are hard at work preparing their schedule of entertainment, the details of which will soon be ready for announcement.

Be sure and commence making plans to show at one or more of the fall fairs. It is best to keep all light colored male birds in shady runs in order to have them in the best show condition. Also, early this month, be sure and pluck all dirty and broken feathers of all males and females that you are contemplating showing; however, this is not recommended in the case of black fowls, as very frequently feathers plucked in this way are replaced by gray or broken feathers.

We believe, that the matter of the *elimination of the necessity for double matings* should be thoroly discussed and threshed out at the coming convention. This question is of vital importance as, under present conditions, there is in effect a serious handicap to many varieties that are otherwise most useful. Fanciers of several parti-colored varieties have already overcome the difficulties that were formerly thought insurmountable and now produce exhibition specimens of both sexes from the same mating. This has been brought about by scientific line breeding. I am confident that the same results can be accomplished with all varieties. Nature originally created our fowls with the males of brilliant hue and the females sombre in appearance. Within the last century, man has been making the female fowl more brilliant in appearance, but has been doing this largely thru the system of double mating. By intelligent line breeding, it is surely possible to bring about this result by single mating. Let us hear from breeders as to whether they deem a few modifications in the Standard in some one or two instances (there surely cannot be more than this number) as necessary to bring this about. The double mating system as practiced with its consequence of 50 per cent of all birds produced absolutely unfit for exhibition purpose is all wrong and there should be a remedy for it. Let us give this matter the earnest attention at Cleveland that it deserves.

H. C. Sheppard, famous Ancona breeder, is noted for maintaining the utmost efficiency in all things pertaining to his farm. However, it was news to the writer, at least, that he maintains and has drilled a well-equipped fire brigade composed of his staff of assistants. Recently, the alarm of fire was received from one of the neighbors and this band started gallantly forth under the capable leadership of Mr. H. C. himself. However, there was no opportunity for a demonstration of its ability as, by the time it reached the scene of the flames, the fire was practically extinguished, as the barn which was on fire was practically burned to the ground.

The list of judges who are to officiate at this year's New York State Fair is

indeed a distinguished one and this, coupled with the increased classification and scale of prizes should bring forth an exhibit that is truly mammoth and which should be even greater than last year's showing, which broke all previous records. Any one who has experienced the courtesy and fair-dealing of Superintendent Manning, either as an exhibitor or visitor, is sure to leave no stone unturned to bring it about so that he can be there again this year.

We were much shocked and grieved to learn of the recent death of George Ewald. Poultry and pigeon fanciers everywhere have lost a valued friend indeed and one that cannot well be replaced.

The Ohio State Fair has adopted for its slogan, "It's great—let's go." W. H. Kinnan, well known show manager, has been placed in charge of this classic function and poultrymen can feel assured that under his guidance their interests will have the best sort of consideration. We look for a great poultry show there this year.

It has been advocated that the large

shows should be judged by comparison and the smaller ones by the score card. If this system were adopted, score card shows would be stamped as small shows and winnings at such would consequently be of little value from the sale or advertising standpoint. Why would it not be a happy compromise of this question to judge all shows by comparison and have arrangements made so that any exhibitor could have his birds scored if he so desired upon the payment of a nominal extra fee? It's worth thinking about.

It is to be hoped that secretaries of shows to be held the coming winter will try and cover more thoroly all the different varieties when making up their schedule of regular and special prizes than has been the case in some instances of late years. There has been a tendency to cater almost entirely to a few of the more popular breeds, which makes such shows top-heavy in these breeds, with but a scattering exhibit of the balance. In order to make a show attractive to the public, who go a long way in paying the bills, it is necessary that a show be well-balanced with a good showing of the different varieties of land and water fowls.

Bargain Birds

You'll find some real bargains among our yearlings and two-year olds. Both males and females. Breeding birds of quality that could not have been purchased at any price a few weeks ago. Now offered at attractive prices in order to make room for new stock.

BUTTERCUPS A DESIRABLE BREED FOR THE BEGINNER.

By MRS. HATTIE D. REED,
Marcellus, N. Y.

IN RESPONSE to a request from the AMERICAN POULTRY JOURNAL for an article founded on facts about Sicilian Buttercups, I chose the above subject not primarily with the idea of airing my personal history, altho it becomes necessary to tell something of my own work to give emphasis to the points I wish to make, as I believe it is generally admitted that the only facts we know are what we learn by experience.

I have been breeding poultry just three years and do not claim to be all-wise, yet I have met with the customary "hard knocks" that are essential to experience and I can readily understand how easy it is to get discouraged and give up for those whose start in poultry has been under less felicitous circumstances. When objects of discouragement got in my pathway, I shut my teeth firmly together and resolved to use everything, good fortune or failure, as a stepping stone to success.

I was brought up on a farm, but had never looked at chickens, except to cook and eat them, and I scarcely knew by name one breed from another. When sickness overtook me and the physician recommended outdoor diversion, the clucking hen and her brood of fourteen chicks provided an interest.

They were a ring-streaked and speckled lot—no two alike—but they were as attractive to me as a pure breed, for I knew no difference, and I found great delight in studying their proclivities and watching their development.

With returning strength, I found diversion the next year in growing about one hundred chicks of the same multi-colored variety, and was as proud of my achievement as a full-fledged fancier, when he has made a flattering winning. With ever increasing interest, harmony of coloring in flocks of hens, as displayed where but one breed was kept, came in for a share of my consideration and I decided that if growing chickens were worth while, it was worth growing something beside mongrels. The points of advantage in different breeds were inquired into, with an idea of choosing one best suited to my purposes. I required financial returns as well as a pleasing interest.

A visit to the Poultry Department of the State Fair brought me in touch with Sicilian Buttercups and it seemed best to investigate their claims a little further.

Correspondence with some of the leading breeders brought out the following facts: Buttercups lay large white eggs and are making year egg records equal to the Leghorn for commercial purposes. They are heavier than Leghorns, thus combining the meat and egg qualities, and the meat has a delicious gamey flavor. They are non-sitters, and require less food for their sustenance than any other heavy laying fowl. Their beauty of appearance and unique cup-shaped combs attract attention. They are easily confined and love to be petted.

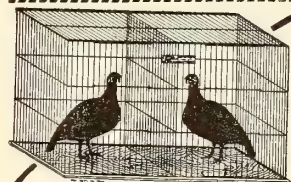

They are an original breed, not a combination of several breeds, their history extending back several centuries, being the domestic fowl among the peasants of Sicily. There are said to be pictures in Italy, bearing date about 1400, which portray the Buttercups as originally found in Sicily.

With this array of evidence in their favor, Buttercups became my choice, and for my foundation stock I bought one of the best pens to be found in the country. This pen was so mated that it produced fine exhibition birds in both sexes and as a consequence I entered the show room and got my first experience there. It is not my purpose to go into further detail in regard to my first year's work, except to say that with no equipment at hand, everything to buy, incubators, hovers, colony houses, fencing, etc., I sold stock and eggs enough to pay all expenses, which amounted to about six hundred dollars the first year, and I kept from the chickens I raised enough of the best to mate up several breeding pens for my second season. Now the question arises in my mind, "Could I have done this with any other breed than Buttercups?" or "in starting with anything but the best to be found?"

I believe the answer is found in the fact that Buttercups command very high prices, both for stock and eggs, because the demand is much greater than the supply. There is probably no breed before the public today that has come into prominence and grown in popularity as rapidly as the Sicilian Buttercup. There is no man in particular to boom them, yet they seem to be booming themselves by virtue of their many desirable qualities.

Once breed Buttercups, and one becomes an enthusiast.

Tho Buttercup breeders number up in the thousands, until they become so numerous that one can buy eggs for hatching from some of the neighbors in every section of the country, the price

is not going to be very low. Such eggs sell now anywhere from 5 cents to \$3.00 a piece. I myself having sold several eggs at \$2.00 each this season, and felt that I was giving good value for the money. There are many discouraging features for a beginner with poultry, sicknesses and ailments in the chicks or hens, eggs that don't hatch because of faulty methods of incubation, lice and mites that are so hard to contend with—all so perplexing to the ignorant and uninitiated, unless one is able to turn good money and see a clear way ahead to keep up courage, while gaining experience, one is tempted to give up the battle and failure ensues.

The experienced poultryman expects these things and is prepared to meet the set-backs—not so with the beginner. The chicken business wears the rosy hue of its cloud in plain sight to tempt the

novice and the cloud is to be discovered after getting away from the starting point. Perhaps a larger proportion of Buttercup breeders are women than with most any other breed. They have found in the Buttercup sufficient merit to command fancy prices, beside paying their way generously in eggs. It costs no more to raise fowls that will sell for \$1.00 per pound than those that bring 20 cents and by being able to secure large returns in the first year of one's work, the usual discouragements of starting are overbalanced.

With Buttercups, as with any breed, it is most desirable to start with the best stock one can get. If the beginner has a desire to apply thought and study, in addition to hard work, the field is open along the pathway of the real fancier, to improve the markings and show points and this means real study, which is most

fascinating. Within the past few years, Buttercups in the hands of a few expert breeders have attained a uniformity of coloring, type and comb, hitherto unknown, and they are fast approaching a satisfactory standard, still there remains much to do to establish blood-lines that are self-perpetuating, and this would be a delightful field of study for the beginner and bring revenue in full proportion to success.

If any one who reads this has a desire to enter the realms of poultrydom and hesitates for lack of encouragement and a definite plan, and if a more detailed account of the problems I met and overcome will aid in any way, I should be very glad to communicate with them personally. I have been helped and encouraged by experienced poultrymen on every side and I believe in passing good deeds along.

SPANGLED WYANDOTTES

BREED

CHARACTERISTICS.

By L. COOK.

I HAVE received many questions regarding the characteristics of Spangled Wyandottes as a breed.

It is impossible to answer so many questions fully by letter. With the editor's consent I will answer the most important ones thru the Journal.

How soon will the breed be admitted to the Standard? This is an important question.

The rules governing the admission of new breeds to the Standard of Perfection requires exhibiting them three times at the annual meeting of the American Poultry Association. I sent a few of my Spangled Wyandottes to the Panama-Pacific Exposition when the association met last year in order to make it possible to have them admitted two years hence. I fully believe the required 50 per cent will more than breed true to the breed characteristics in two more years of breeding.

Another question is what are the hardest defects of the breed to eradicate? I have found blue legs and white ear lobes, and especially blue legs the hardest defect of any. These are beginning to come all right now. Some of the problems that confront us at present is to get good spangling on good Wyandotte shape. I have some with as good spangling as can be found on Hamburgs, but most of these have a tendency toward the Hamburg makeup. The tendency for birds with good Wyandotte shape is too much black in tail feathers, especially of the males. It will probably take several years to eradicate this. But it is coming and we will get the desired combination later.

We must increase size some. The flock should weigh about one pound heavier as an average in order to have them the standard size. This can be done by giving proper care to the growing chicks. The breed is larger than several or more years ago.

What are some of the breed's characteristics? is another question.

I have already written fully regarding good egg production, rapid growth, health and vigor being some of their characteristics. Still there are others just as important. One of the most desirable from a fancier's standpoint being this: The growing cockerels do not "nag" the hens, showing mating instinct until they are matured and rounded out. This characteristic was inherited from that splendid breed, the White Wyandotte. And this is one secret of the White Wyandotte's great popularity. This inherited good quality makes it possible to allow the entire flock to range until the young males are matured. The cockerels do better, grow faster and have better carriage than if they were yarded. Every fancier with experience understands the great advantage this would be on maintaining a breed for shipment.

But unlike the Whites the males, after maturity are strong in virility. The eggs have about as high per cent of fertility as the Hamburgs.

Another score in their favor and one transmitted by the White Wyandottes, is rapidity of the cockerel's growth. When they have reached a certain stage in their development they grow with

such amazing rapidity and "round out" so quickly as to seemingly rival Jonah's gourd which "grew up in a night." They come up from range in the evening at this time with "crops" resembling Pouter Pigeons.

Another peculiarity: The young cockerels never fight. They sometimes spar a little, but I have as yet to find a pitched battle. The matured males will often fight viciously if strange cocks are brought together.

There is an error regarding the size of Spangled Wyandotte eggs. Spangled Wyandottes lay a medium size egg similar to other Wyandottes, but do not average quite so dark in color. The eggs are usually of good shape.

Prominent Poultryman Loses By Fire.

Joseph L. Blair, of Batavia, Ill., one of the directors of the well known Batavia Poultry Association, had the misfortune to sustain a \$500 loss by fire a few weeks ago, when his brooder house, brooder, incubator and one hundred fancy chicks were consumed. The flames were raging fiercely when discovered by school children about 4 P. M. The Batavia fire fighters were called and soon had the fire under control, saving the other buildings and the breeding stock. The loss was partially covered by insurance.

WHY I BREED BLACK LANGSHANS.

Unsurpassed for Table Purposes—
Being an Established Breed, the
Type is Well Fixed, the Offspring
Presenting a Pleasing Uniformity—
Combine Great Utility with Rare
Beauty—A Contest Article.

By M. R. BUZZELL, Lakeport, N. H.

THE desirable qualities for which fowls are valued have been given as "good size with superior table qualities, good layers of extra large white eggs, a non-sitter and a fowl that is beautiful and attractive, yet hardy and vigorous."

We take pleasure in presenting the Black Langshan as a breed of fowl possessing most of the desirable qualities mentioned. In place of any which may be lacking, other desirable qualities are possessed by the Black Langshan which the average poultry keeper the country over would consider of even greater value.

They are not non-sitters and they do not lay a white egg, but the Black Langshans, with their beautiful, large dark-brown eggs—a large per cent of them laid during the cold season of highest prices—look pretty good to breeders in many parts of the country where white

eggs, even the large ones go hard, when offered for sale in competition with large dark brown eggs.

That they are one of the sitting breeds seems not to be a disadvantage to them. In fact, in numerous laying contests, the sitting breeds have easily been able to hold their own with the non-sitters and in many instances to outlay them. Many breeders find it of much value to have plenty of good sitters when needed and prefer them to artificial means of hatching and brooding. If not wanted for this purpose they are easily persuaded to forget their desire to set and are soon laying again after a brief rest.

It is doubtful if there is a breed of poultry in existence that can surpass the Langshan when prepared for the table.

The comb of the female, which, if frosted, might injure them as layers, is small enough to prevent serious damage from this source.

Being an old established breed, the type is well fixed, insuring a flock of youngsters of a very pleasing uniformity.

They are docile, easily confined and always clean looking, thus making them equally well adapted for farm or village, also on account of their color they are not an easy mark for hawks.

Finally as a show bird—and if you breed them you will surely want to exhibit them—they have many points of

superiority. For one thing they do not have to be washed. Their bright red faces, wattles and combs form a very beautiful and striking contrast to the brilliancy of their black plumage, which together with their large size and majestic appearance, make them an object of attention and admiration by the general public as well as the fancier.

After all, it is truly a wonder why so many people are breeding the varieties they are—varieties lacking half the good qualities mentioned above—when they might be proud owners of a flock combining great utility value and rare beauty—the good old Black Langshan!

We all have dreams of future accomplishment. What are you doing to make your dreams come true? There is a saying to the effect that "Inspiration without perspiration makes no progress," and unlike many sayings, it can be relied upon as truth. Nothing of worth can be accomplished without labor. When you have a good idea, seize it, and burn the midnight oil if necessary in carrying it into execution. Success takes no note of the lazy man.

Every time we give way to weak willed explosions of temper or make unreasonable demands upon our associates or friends, we prove the claims of our enemies concerning our littleness of character and unreliability of disposition.

What Are the Earliest Layers?

THIS AFFIDAVIT TELLS YOU

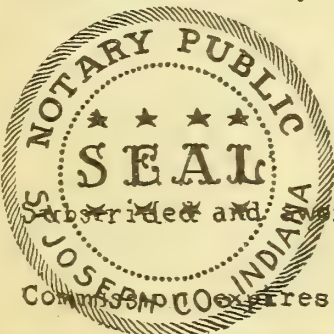

State of Indiana ss.
St. Joseph County

South Bend, Ind., May, 1, 1916

The undersigned hereby certify to the following facts:

On or about November 7, 1915, Single Comb White Leghorn and Silver Campine baby chicks were hatched on our plant. This stock received nothing in the way of feed and care other than the food and attention ordinarily given our other baby chicks.

The first pullet egg was laid April 1, 1916. On April 4th, there were six pullet eggs. That is, out of approximately ten or twelve pullets hatched, half were laying before they were five months old, although they were incubated in November, and raised during the winter months of December, January and February.

OUT OF THE EAST.

By P. K. WHITE.

My hat is off to the chap who once said, "Ohio has the best and the poorest roads of any state in the Union."

Traveling by auto, Mr. Stahmer and I left Chicago, June 2nd; our first stop was South Bend, where we visited Frank E. Hering—We found him donned in overalls, working among his birds as hard as one of his men. Our next stop was at Fort Wayne, and I regret to state that we found W. D. Holterman a very sick man, in fact so ill that it will be weeks before he will be able to be up and around. Chas. G. Pape was the busiest man in town, promoting the home coming week.

At Columbus, where we arrived on Sunday, we found Mr. Shields (of Rawnsley-Shields Poultry Farm) out in the strawberry patch, and they were real strawberries, there wasn't a one but what was almost as large as a half dollar. We had the pleasure of meeting all the Shields family and enjoying dinner with them. In the evening we dined with the Rawnsley family and met Lem's brother and his wife, two very popular Canadian poultry people. Up to this time our trip had been uneventful, that is, with the exception of having several punctures and going to the hotel at Bellefontaine, Ohio, asking for a room with bath, only to be told that they had no private baths, but would put us in a room next to the public bath. It was late when we arrived, so we went to one of those "crippled lunch rooms," the places that have chairs with four legs and one arm, from there we went to the jitney show, to look for gum under the seats. It was eleven when we returned to the hotel and the clerk asked me if I knew what day it was. I said, "Saturday; why do you ask?" "Nothing," he replied, "only I am afraid you will find all the hot water used."

Our next stop was Huntington, West Va., where we were compelled to stay for several days on account of the heavy rains. Leaving there, we crawled and swam to Wheeling, going up the river road on the Ohio side. It was a trip we will never forget, for we were first in mud up to the hubs, then crossing streams with the water up to the running boards. They can talk about autos, but we drove places that even a "Peace Boat" (Ford) had never been.

At Washington, Pa., we just finished taking a few pictures at Thornycroft Farm when, to keep us from becoming lonesome, it started to rain again. We had heard so much about Oak Grove Farm we made up our minds to brave the storm and become acquainted with it. Mr. Ewing was out of town, but if he is as dyed in the wool fancier as his wife, watch their winnings at the big shows this winter. We are now at Pittsburg, and Czar Baldwin and Daddy Rankin are doing all in their power to acquaint us with the local fanciers.

DOES THE SHOE FIT?

Just why is it, that breeders do not realize a greater percentage of sales from their inquiries? This, I believe, is as hard to answer as the time-worn question, "How old is Ann?"

A very careful study of same has lead me to believe that in a great majority of cases failure to turn an inquiry into a sale is the fault of the breeder.

The AMERICAN POULTRY JOURNAL is like all other poultry journals, in one respect at least. We, nor any other journal, can make your sales for you. The journal is simply the medium by which we introduce the reader to the advertiser, the actual sale must be made by "you," the advertiser. Our army of readers have faith in our publication; this faith is extended to you, by virtue of your being one of its advertisers. When we introduce you to the reader and they in turn write for your catalog,

Rudy's Perfection White Wyandottes

My strain is noted for its egg production and exhibition qualities. My customers all over the country laud my square deal business methods. I guarantee to give you extra good value for every dollar you pay me and if you are in the market for line bred birds I will be glad to tell you just what I have for sale.

prices, etc., we two have done our part.

How about you, as an advertiser, are you doing your part? An inquiry, if received in the morning, should be answered in the afternoon; in no case should it be held more than twenty hours.

I can recall several times in my life (and I bet you can) that I have walked into a store to buy something and stood at a counter waiting to have a clerk serve me, while two or three of them stood around talking efficiency or something else. What did I do? Just what thousands of others have done, walked out and spent my money where I would get service.

A man or women in business must give service and satisfaction. Both of these make friends. But friends can-

PULLETS

R. F. D. No. 3, SPOKANE, WASH.

not be made from people who must wait on your time and pleasure for an answer to their inquiry. The reader knows that there are other people who will give them a prompt answer and the sooner you realize it, that much quicker will your business pay dividends.

Take pains with your inquiries, answer them promptly, tell your story in as few words as possible, but tell it straight from the shoulder—tell about how good your birds are, not how bad the other chap's are; use a neat letter head and, above all means, use a typewriter. You may be the best penman in the world, but a typewriter letter looks better and a thousand per cent more business like. Do not say that you cannot use a typewriter, because they are very simple and you can learn in less than a week; furthermore, you can buy them very cheap and on payments.

I do not say that these things will turn all inquiries into orders, but I do contend that they mean more sales.

Samuel W. Bradley, of Lime Rock, Conn., one of the real old school of fanciers, is coming back strong with White Rocks.

Note that "Smiling Dick" Keyler is now superintendent of Wilburtha Farms. Congratulations, old chap, everyone that knows you is sure that you will make good. This new combination of Fisk, Chapman and Keyler are going to be heard from at the winter shows.

Here is a little proof of the confidence that our readers have in AMERICAN POULTRY JOURNAL and its advertisers. One of our subscribers living in South America recently sent Foxhurst Farm a money order for \$250.00, asking that they pick him out two good pens, for the amount enclosed. There had been no previous correspondence in any way, he was "rightfully sure" that they would send him full value for his money, because he had read their ad in AMERICAN POULTRY JOURNAL.

"Speed merchants, fanciers and bachelors," that is the triple title that belongs to two well known Bostonians. J. W. Bowman is in the automobile business, owner of Rock Ledge Farm, and is single. The other is H. J. W. Fay, who is in the submarine business, owner of White Wyandotte Poultry Farm, and likewise single.

Note that W. F. Hayward of Westboro, Mass., has been appointed New England secretary of White Rock Club.

One of the finest things in the universe is Harmony. Nature is never out of tune. Mankind sometimes, however, thru an upset condition of the liver or a case of exaggerated ego, kicks up a fracas and instigates discord in his home environment, business association, or wherever he happens to be. Man is the finest handiwork of Nature. A man out of tune is an anomaly of Nature. Cut out useless discords in life's relationships and the harmonies of life will everywhere become apparent.

Many of us go to great expense and marked inconvenience in hiding our real selves behind an easily penetrable mask. It would save time and money, could we realize that every individual voice and unconsciously portrays the real self supposedly hidden beneath the mask.

Send for It!

Shoemaker's Poultry Book and Almanac for 1916.

The book has over 200 pages with many colored plates of fowls true to life. It tells all about chickens, their prices, their care, diseases and remedies.

All about Incubators, their prices and operation. All about poultry houses and how to build them. It's an encyclopedia of chickendom. You need it. Only 15 cents. Your money back if not satisfied.

Associations and Shows

Secretaries are Requested to Send in News Items of Interest About Their Shows for This Department

PROGRAM AND ORDER OF BUSINESS.

Forty-first Annual Meeting of the American Poultry Association, Cleveland, Ohio, Headquarters Hollenden Hotel, August 7-12, 1916.

All meetings of the association will be held in the Convention Hall of the hotel.

MONDAY, AUGUST 7, 1916.

9 A. M.—Registration of members and visitors and presentation of souvenir badges to members.

9:30 A. M.—Meetings of the Executive Board will be held morning, afternoon and evening in Committee rooms at hotel.

8 P. M.—Reception at the Auditorium for members of the association, visiting poultrymen and friends.

TUESDAY, AUGUST 8, 9:30 A. M.

Address by Geo. H. Poulson, President of the Cleveland Poultry Breeders' Association. Welcome to Ohio, an address by Frank C. Stier, President of the Ohio Poultry Breeders' Association.

Welcome to the City of Cleveland, an address by Mayor Harry L. Davis.

Welcome by the Cleveland Chamber of Commerce, an address by T. P. Cagwin, of Convention Board.

Response by E. E. Richards, President of the American Poultry Association.

Presentation of gavel to E. E. Richards, President of the American Poultry Association, by the President of the Cleveland Poultry Breeders' Association.

10:30 A. M.—Regular call to order of the association by President Richards.

Important Notice—All credentials must be in the hands of the Secretary before opening roll call.

Appointment of Committee on Credentials. Roll call of members by states.

Approval of minutes of last meeting, as published in the Proceedings.

Report of Committee on Judiciary, submitting order of business to govern all sessions of this annual meeting of the American Poultry Association, as per Section 88, Article 10, of the Laws of the association.

Report of Election Commissioner.

Election of Board of Review.

Report of Executive Board on applications for membership.

Report of Committee on Credentials.

Notice—All following reports are open for discussion as soon as made upon motion to carry their recommendation into effect.

Annual report of Secretary, with recommendations.

Annual report of Treasurer, with recommendations.

Annual report of Finance Committee, with recommendations.

Adjournment.

AFTERNOON SESSION, 2 P. M.

Report of Board of Review, under suspension of Rules.

Report of Committee on Credentials.

State and Provincial membership reports. (All reports must be in writing, signed by the Presidents of the Members, and in the hands of the Secretary of the American Poultry Association before reports of these state and provincial associations are called for. No verbal reports will be permitted.)

Report of Committee on Welfare, Grievances and Appeals.

Report of Committee on School Text Books.

Report of Committee on Market Poultry and Egg Standards.

Report on Committee on Breed Standards.

Important Notice—All resolutions, motions, petitions, etc., calling for an expenditure of association funds must, as per Section 96 of Article 12 of the Laws of this organization, be presented at or before this time: otherwise a three-fourths vote will be necessary for a suspension of the Rules in order to introduce such resolutions, motions, etc., at a later session of this annual meeting.

Report of the Executive Board on new members.

EVENING SESSION, 7:30 P. M.

Address by Frank B. White, Chicago, Ill., Managing Director Agricultural Publishers' Association, on advertising in Poultry and Farm journals.

Address by Prof. H. R. Lewis, New Brunswick, N. J., on Poultry Organizations in New Jersey and Pedigreed Laying Contests.

Address by Prof. James E. Rice of Cornell University, Ithaca, N. Y.

WEDNESDAY, AUGUST 9, 9 A. M.

Report of Committee on Judiciary, as per Section 90 of Article 10 of the Laws, relating to proposed amendments to Constitution and Laws of the association.

Consideration and action upon amendments to Constitution and Show Rules, and resolutions, as published in the May Bulletin.

Trip thru the May Company's Department Store by the ladies.

Reports of all Committees not herein mentioned.

AFTERNOON SESSION, 1:30 P. M.

Further consideration of proposed amendments.

2 P. M.—Automobile ride thru the parks for the ladies.

WEDNESDAY EVENING.

Trip to Luna Park.

THURSDAY, AUGUST 10, 9:30 A. M.

Report of Executive Board.

Report of Committee on Poultry Shows and Licensing Judges.

Election or approval of new members.

Report of Hold-over Committees.

Report of Committee on Education.

Report of Committee on Legislation.

Report of Finance Committee, submitting budget of estimated expenditures for ensuing year, as per Section 95 of Laws.

Report of Committee on Poultry Huckstering.

Unfinished business.

AFTERNOON SESSION.

THURSDAY EVENING.

Boat ride on Lake Erie.

FRIDAY MORNING, AUGUST 11.

Trolley ride and visit to H. Cecil Shepard's Poultry Farm, Berea, Ohio.

During the Convention there will be a meeting of Poultry Judges for the purpose of discussing important problems in which they are particularly interested.

Meeting of Poultry Judges.

Meeting of Poultry Show and Specialty Club Secretaries.

Meeting of dealers and hatchers of day-old chicks.

Meeting of poultry journal editors and solicitors.

The time for these meetings will be announced at the opening of the Convention. Program subject to change as conditions may require.

You Lost Many Eggs This Year! Avoid Future Losses—FACTS FREE

Your season's hatching experiences are still fresh in your mind—the successes and failures. *Right now* is a mighty good time to study the problem of how to get better results next year; how to eliminate all chance of failure, to get bigger hatches, to make greater profits.

Learn what results were actually secured this year by users of the Newtown Giant Incubator and compare these records with your own. Figure how much more money you would have made if you had used more efficient hatching apparatus and promptly perfect your plans to secure bigger, better results next season.

It isn't a bit too early to attack this most important problem and get it settled *right*.

We will furnish free some hatching reports and statistics which will convince you that the science of artificial incubation has at last been perfected.

Every live poultryman should study these figures. Write for them today.

Chicago Coliseum Show for 1916.

The Red class will be divided between Tucker and Kummer. Pierce will judge White Leghorns, both Rose and Single Comb. Whitney, White Wyandottes, Keeler Buff and Golden Wyandottes. Orpingtons will be divided between Byers and Rawnley. Byers, White Orpingtons, and at least one of the male classes in Buffs. Rawnley all the Buffs except the one male class, and will have at least one male class in Blacks. Rikhoff, Brown and Buff Leghorns. Hackett Partridge Wyandottes and Buff Rocks. Wells Partridge Rocks and Houdans. Johnston, Langshans and perhaps Minorcas—this last class not fully decided as yet. Tucker, Sussex. Silver Wyandottes are still open, waiting for the action of the club, but it is quite likely that Kummer will have at least a part of them. Barred and White Rocks still open, but it is quite likely that Russell will be assigned to them. Camperes still open and judge will be named later. This is as far as we have gone with the assignment, and if of value to our exhibitors we are glad to give this advance notice. Dates for 1916, December 13th to 15th, opening on Wednesday following the close of the Palace Show in New York, and closing on Monday night. Buffalo and St. Louis will likely hold to their Thanksgiving week. The Palace will open the first Tuesday in December, and we presume the Garden will hold their old dates of the last days of December and the first of January. With the Coliseum open four days after the close of the Palace and closing ten days ahead of the Garden, everyone can make two or more of these shows.

All prospective exhibitors by sending in their names now while they think of it will be sure of receiving the Premium List November 1st.

Theo. Hewes, secretary Coliseum Show, 25 West Washington St., Indianapolis, Ind.

HAMILTON, OHIO'S BIG SHOW.

Last season Hamilton held one of its most successful shows in connection with the big fair in October. Same was successful to such an extent that the same proposition has again been adopted and the show will be held on the 3rd, 4th, 5th and 6th of October, the entries closing on September 30th, Saturday before the show. Secretary J. E. Humbach, who has acted in that capacity for so many years in Hamilton, will again have charge of the show, all birds will be properly cooped, fed and cared for by the association and this will, without a doubt, be the biggest and best show ever held in Hamilton. Several of the country's leading judges will be secured and large silver loving cups will be given to the winners all along the line.

Entry fees, 25c per bird, \$1.00 per pen, and premiums paid 60% to first and 40% to second, the association holding out nothing. Five handsome association ribbons will also be awarded. All birds cooped free of charge in uniform cooping. Write J. E. Humbach for particulars of this big early show.

MODERN GAME AND GAME BANTAM CLUB.

Every breeder and fancier of Modern Games and Game Bantams is requested to drop a postal card to the undersigned for a copy of the Constitution and By-Laws of this club. The impression prevails that this charter is the most wide-awake one governing a specialty club in this hemisphere. All the good qualities of America's and England's clubs have been drafted into this one, but it is only natural that this should be so, for no more sterling fancier exists than the one who is a lover of these sportiest of fowls—none more liberal in their views.

The charter has opened for membership and all those who enroll before September 1st will become charter members; their names will always be run in heavy faced type in the club catalog; and by special inducement they will have no initiation fees to pay nor dues until after September.

Claude C. Armstrong, Secretary,
Modern Game and Game Bantam Club,
40 Heather St., Rochester, N. Y.

BLUE ORPINGTON CLUB.

Dr. W. E. Creath, of Ottumwa, Ia., was elected president of the Blue Orpington Club. Dr. Creath wishes to express his thanks to the club members for his election and for the honor, and to pledge his best efforts to its interests.

The Blue Orpington Club will hold its next club meeting at Madison Square Garden, N. Y.

Will all the members please send in their articles or pictures of their birds as soon as possible for our club book? Would be very glad to receive them. Also to those who have promised to write articles, don't forget to send them in now.

GRACE NICHOLSON,
Secretary Blue Orpington Club,
Leominster, Mass.

Diamond Corn Gluten Meal

A hen becomes a profitable investment when it starts to lay. Your pullets should begin to lay when they are four and a half to five months old

Protein fed in the right proportion is indispensable for the development of the young stock. Diamond Corn Gluten Meal contains the necessary protein.

Try this formula for your young stock:—

50 lbs. of Wheat Bran	50 lbs. of Diamond Corn Gluten Meal
50 lbs. of Middlings	35 lbs. of Beef Scraps
50 lbs. of Corn Meal	15 lbs. of Bone Meal

In one case where this dry mash was fed a pullet laid her first egg four months and 10 days after she was hatched. The rest of the same lot were all laying before they were five months old.

The way for you to obtain the same results is to get Diamond Corn Gluten Meal from your dealer, and start feeding your young stock this mash.

F. M. GENSCH Box G OMRO, WIS.

HANOVER FAIR POULTRY SHOW.

From every indication the coming poultry exhibition, September 12-13-14-15, will be the largest and best in quality of any previous exhibition held by this well known Fair Association. Manager C. N. Myers and assistant Jas. T. Huston, two of the best known poultrymen of the East, are bending every effort to this end, which, with the earnest co-operation of the many fanciers of that section, cannot help but draw a quality exhibit to Hanover, Pa.

The poultry building is one of the finest in the country, fully equipped with empire coops, the best of lighting facilities, and every care given to sanitation.

The management announce the following judges: J. Harry Wolsieffer, Vineland, N. J.; Geo. L. Young, Brooklyn, N. Y.; Chas. Wells, Stratford, Conn., and Chas. Nixon, Washington, N. J. This alone should bring out a record entry, as these men are recognized as among the country's best judges.

Premium list is now ready for mailing, and shows in addition to most liberal regular premiums a long list of special cash and cup prizes.

Better write to day for premium list and plan to make your entry early. Address P. O. Box 286, Hanover, Pa.

GREAT CHANGES AT ALLENTOWN.

The Premium List of the Great Allentown Fair which will be ready some time next month will show some great changes in the poultry department. Changes that are sure to please breeders and exhibitors and that will keep Allentown in the forefront as one of the very biggest and best poultry shows in America.

To start with, all requirements as to filling a class are removed. Or, even if only one bird is shown in a class and is awarded a first prize it will get first money. Next, three cash prizes will be paid on all varieties, all classes, singles and pens. Lastly, there will be a complete new list of judges this year, each one a judge of national reputation and with such things as game bantams, ornamental bantams, water fowl, market eggs, etc., each having its own specialty judge.

Outside of this Allentown, under Supt. Wittman, has always been in the forefront in its up-to-date management and conduct of its poultry show and the rules have been still further amended to continue this work forward.

GEORGIA STATE FAIR.

Preparations are being made to give the poultry and pigeon departments of the 1916 Georgia State Fair to be held in Macon, November 5-11, especial attention, according to information received from the fair association by B. E. Adams, who was recently appointed manager for this department.

A number of improvements will be made in this department and large cash specials will be offered, it is announced. The annual catalog of the fair is now ready for mailing and contains complete classification on all varieties of poultry and pigeons. It is expected that a special premium list on poultry will be issued some time in August; this list will contain all rules governing the show and also have a list of the many specials which will be offered in this department.

TO SHOW SECRETARIES.

The National Partridge Wyandotte Club offers to its members gold, silver and bronze fob medals, also special ribbons to each first cock, hen, cockerel, pullet, pen, old pen and young pen. Breeders desiring to join the club can do so by sending \$1.50 to J. F. Tallinger, secretary-treasurer, Barnard, N. Y., membership fee and dues for year ending October 1st, 1917.

Raising Poultry This Way Means Raising Profits

Have you ever counted how many eggs were broken or spoiled by collecting in a common basket? I have, and that's why I invented Andrews Egg Tray for use on my own farm. It saved me so much money and kept my eggs so well, that I decided most poultry men would want it. And they do! My egg trays jumped right into popularity because they offer the easiest and best way to collect, separate and keep eggs. They are made of selected poplar, strong and nicely varnished. Write me about them.

To keep your flock in tip-top condition, I have poultry medicines that have been tried and proven good by experts everywhere. My Obaco will cure nearly any poultry diseases, including roup, gapes, canker, sorehead, etc.

I will gladly send you my "Poultryman's Text Book" on request. It will tell you how to raise chickens right and how to make a lot more money out of your poultry. Write today.

THE O. B. ANDREWS COMPANY

Dept. A, Chattanooga, Tenn.

"The World's Largest Poultry Specialty Manufacturers." All of our articles for sale by dealers throughout the world. If your dealer hasn't them, buy of us direct.

CLASSIFIED ADS.

UNDER this heading ads will be inserted for seven cents per word each month for less than three months, and **six cents per word each insertion for three months or longer.** Changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under **classified headings.** No ads accepted at less than an average of sixty cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Write your copy plainly, as upon this the correctness of your ad largely depends. When placing your ads remember that advertisers using Classified Ads get better returns from AMERICAN POULTRY JOURNAL than from any other poultry journal—none excepted. On writing any of these advertisers mention AMERICAN POULTRY JOURNAL. All copy for Classified Ads must reach us by the 17th of month preceding date of issue. :: :: :: :: ::

Beekman 3472. 7

30-ACRE COMMERCIAL egg farm. Adjoins car line, 50 miles from Cleveland. Fully equipped. Everfresh Egg Farm, Wooster, Ohio. 7-8

MORTALITY IN CHICKS NEEDLESSLY HIGH.

Leg Weakness, Gapes and Indigestion Chief Causes.

When one considers that, according to such statistics as are available, fully 50 per cent of chicks die before they reach the pullet age, it would surely seem that some measures should be taken to mitigate the heavy loss this means to farmers and poultrymen throughout the country. Leg weakness, gapes and indigestion are the commonest causes of premature death, and all these diseases, if not entirely preventable, are curable if taken in time. All fowl need a tonic, blood builder, internal antiseptic and digestive stimulant, particularly the susceptible young chicks, and the thing is to provide them with a medicine that meets all these requirements. Dr. Hess Poultry Pan-a-ce-a is quite generally recommended in this connection, and the fact that it has been on the market for over 22 years and seems to be growing in popularity would indicate that it must be a preparation of considerable merit. Dr. Hess, the compounding, is widely known as a skilled and experienced veterinarian.

A matter worthy of note is the nation-wide use of Dr. Hess Poultry Pan-a-ce-a. The manufacturers, Dr. Hess & Clark, claim that in the country as a whole and including Canada there are some 28,000 dealers handling the preparation. This fact alone speaks most emphatically for its worth. If it were not a highly efficient poultry remedy, it would have been out of mind long ago. Certainly, no such great number of dealers would ever have been engaged in its sale if there were not an insistent and continuing demand for it by poultry raisers.—Adv.

The Queen Gets The Chicks

Producing large hatches of strong, lively chicks, able to live through the uncertain period of the first few weeks and develop into vigorous fowls it pays to feed and raise. Many farm folks tell us that the Queen is exceptional in this respect. A perfect Regulator and the proper degree of moisture required are two of the advantages of the Queen. Not a cheap incubator, but cheap in the long run. **QUEEN INCUBATOR CO., 105 Bryan Ave., Lincoln, Nebr.**

AMERICAN POULTRY JOURNAL

"WE LEAD - OTHERS FOLLOW"

Make Your Flock Natural Layers

THE biggest-paying, best-producing hens are always natural layers. Forcing fowls to lay by feeding heavy, rich foods may tell on the health of the birds and it often injures their breeding quality. Forced eggs as a rule are not fertile.

Red Comb Poultry Feeds Do Not Force the Eggs

Red Comb Meat Mash, the great egg producer, is made of oat-meal, oil-meal, corn-meal, meat scrap, wheat bran, wheat midlings, alfalfa-meal, and *not over 5% shell and 1% charcoal*. These ingredients, the best earth can produce, are mixed scientifically by experts. They form a correctly balanced ration that will give growing health to your flock. Red Comb Meat Mash produces natural layers; it helps the hen by giving it in correct proportions egg-making food.

Unbalanced Rations Produce Fat

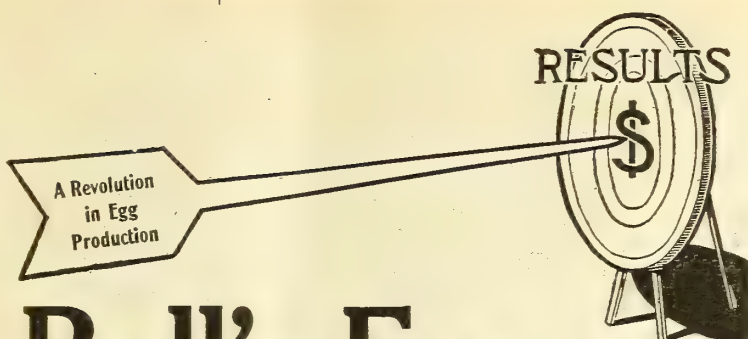

In building good egg-laying strains in your flock, poultry experts will tell you the value of the *correctly balanced poultry feed*. *Unbal-*

anced rations produce fat. Fat birds are not good producers.

See your Feed Dealer today. Ask him to show you the Red Comb line of poultry feeds. Red Comb, the big, universal brand, is used and recommended by successful poultry raisers and authorities the country over. Start feeding Red Comb today for profits. It makes heavy layers in nature's own way, because it contains egg-making ingredients, balanced correctly, that mean health to the flock and fertile eggs. Ask your dealer today. Write for valuable Poultry Book, written by six of America's leading poultry experts. *Free* to poultry raisers.

HALES & EDWARDS CO., Dept. B, 327 So. La Salle St., Chicago, Illinois
(Formerly Edwards & Loomis Co.)

“Means Health”
Red Comb

A Bull's-Eye

George G. Newell's new book, "A Revolution in Egg Production" tells you how to hit the bull's-eye of *Results*. It shows a method that will

Increase

Your Egg Production

100%

during the molting season and in the winter when you need it most.

It takes nearly all the eggs your hens lay to pay expenses, doesn't it? *Every additional egg you can make them lay is clear profit.*

This book is not a jumble of clippings like many on the poultry industry, but an intelligent, well written guide to success. No man or woman has been in the poultry business so long or knows so much about it that they can afford to pass this offer by.

We said you could increase your egg production 100%. It has been done. You can do it.

Don't rack your brain with doubts!

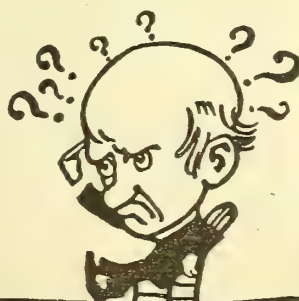

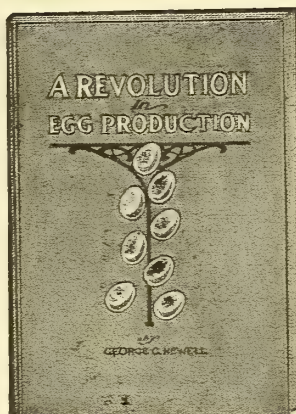

"Procrastination, the thief, stealeth away thy fortune"

A handsome book of 368 pages, each 6x8 inches, encumbered with 112 full page illustrations

THE NEW REVISED EDITION of the Standard of Perfection

NOW READY, and will be the only recognized authority on all Standard requirements of American-bred Land and Waterfowl until 1923—eight years in service.

Since 1874 the American Poultry Association has issued under copyright, many editions of the Standard, but this issue is, without doubt, the masterpiece.

It is the one great book most used by judges, fanciers and breeders, and the only recognized authority in awarding prizes in the Poultry Shows of the United States and Canada.

The new edition contains 112 full page illustrations of Chickens, Bantams, Ducks, Geese and Turkeys by America's foremost artists.

A new nomenclature indicating each section of all Standard breeds and varieties—male and female.

A glossary of fifteen pages describing and illustrating many technical terms used by poultry breeders.

A complete list of recognized disqualifications for each American standard-bred breed and variety.

A chapter on cutting for defects. A full and complete standard description of each and every recognized Standard breed of Land and Waterfowl, giving the standard requirements in every section, weight, size, color, markings and shape,

No poultry breeder should be without a copy

Buy a copy and know the standard requirements for all American standard-bred breeds and varieties. Price, cloth, \$2.00; leather, \$2.50. Sent postpaid.

Schwalge Sectional Incubator

Grow As Your Needs Demand

START
WITH
THIS

START WITH ONE SECTION—A complete incubator; add other sections up to ten and you have a mammoth incubator. All sections heated by one lamp—it's a great new idea, exclusive with the Schwalge.

SELF-REGULATING, perfected moisture and ventilating system; thermostat regulator keeps uniform temperature—no overheating, no cold spots. Has no equal. Write today for full information.

POULTRY SHOW

Entries Close September 5th, 1916

The Dividing Line Between Profit and Loss in Most Businesses Is Very Small

Every additional egg you can make your hens lay is that much more clear profit. George G. Newell's new book, "A Revolution in Egg Production," tells how to get more eggs during the molting season and in the winter, when you need them most. Cloth Bound, \$1.00 per copy.

INDEX TO GUARANTEED ADVERTISERS

The guarantee of American Poultry Journal Pub. Co., is back of every advertisement and every advertiser in American Poultry Journal. We will not knowingly accept advertising from a dishonest concern. Advertisements for patent medicines, whisky, beer or mining schemes, or any other questionable advertising, are not accepted under any conditions. We will not knowingly introduce a dishonest advertiser into the home of one of our subscribers. We refuse many thousands of dollars worth of advertising during the year because we are not willing to guarantee these advertisers to our subscribers. When answering advertisements mention American Poultry Journal and refer to this guarantee.

 Eggs now at half price, 10
 grandpens. Mating list free.
 Also, a few very fine hens
 and pullets cheap, to make room for young stock.
 Frank Fahs, Jr. Box 730 Dyersville, Ia.

Install an Automatic Ventilator

In the Brooder and Colony Houses

The "Ideal" Ventilator, automatic in operation, requires no attention. Opens and closes whenever the temperature needs adjusting; noon or midnight. Prevents overheating and avoids chilling draughts from open windows. Eliminating brooder troubles, makes more healthy chicks. Prevents crowding. Adapted for every type of poultry house or any brooding system. Releases the foul air in Barns, Stables, Garages, etc. Price \$4.50. Parcel Post or Express, prepaid. Satisfaction guaranteed or money refunded. Mail orders solicited.

Greatest Known Layers. Young Strain.

Reduced Prices on Breeding Stock

THE Hatching Season is over for this year and I will offer a large lot of my breeding stock at prices that will surprise you, while they last. I have a large number of youngsters coming on and consequently will have to have the room for them. Here is your chance to get some fine breeders and layers at reduced prices. Also have a nice bunch of early hatched cockerels to offer at very reasonable prices. Let me have your order for some of the birds; it will receive my careful attention, prompt shipment, and your approval. Write me your wants. Catalog free.

Grade C Eggs...6c	Grade C Chicks...12c

My guarantee on eggs and chicks during this special sale is arrival of eggs in good hatching condition, and the arrival of chicks in perfect health. Have your express agent give you a statement describing condition of eggs or chicks if received otherwise than as above guaranteed. Can make immediate shipment of eggs. Can usually ship chicks within 5 days after receipt of order.

Special Stock Sale

In all my breeds I have some exceptionally good breeders (hens and cocks) to offer for the first time. This is stock that I would not sell during the past four months. It is the stock that has produced the eggs and chicks for over 4,500 satisfied customers. My regular prices are very reasonable. This sale gives you the opportunity of buying real layers, a foundation for your future success. I have some very good cockerels and pullets growing nicely. You may want some of them. Advise me of your wants. I will be pleased to quote your prices on same for late summer and early fall delivery. Do not overlook the advantage of booking your order now. It means a reserved selection and mutual benefits.

Write for my instructive illustrated catalog. It has helped others and will undoubtedly help you.

JOHN G. POORMAN

CLOSES AUGUST THIRTY-FIRST

Scores of customers look forward to this sale as being their opportunity to secure Breeding Stock for the following season of a higher quality than their money will buy at any other time of the year.

You can buy one and two-year old males and females for just half the price the same birds would have cost you prior to the breeding season. You can buy part of my birds of any quality from the highest to the lowest; so you have a wide range of prices and can secure just the quality you desire. Birds that will WIN FOR YOU next winter and birds that will BREED YOU WINNERS.

You know about OWEN FARMS AND ITS BIRDS. If you have not seen the NEW CATALOG you have a real treat in store when you send for it and read it. You will appreciate the importance to yourself of basing your future success on OWEN FARMS ESTABLISHED LINE-BRED STRAINS.

Madison Square Garden Winners

393 OWEN FARMS BIRDS have won FIRST PRIZES at MADISON SQUARE GARDEN, NEW YORK, as far as competition from other breeders is concerned. NO SIMILAR RECORD HAS BEEN MADE BY THE BIRDS OF ANY OTHER BREEDER IN ALL THE WORLD.

1916 YOUNGSTERS

You can buy OWEN FARMS EARLY COCKERELS and PULLETS for your FALL FAIRS at very moderate prices and MAKE YOUR WINNING CERTAIN. My early January pullets commenced laying May 29th, so, as you can see, my youngsters will be mature for you. Will only raise the cream of my early cockerels, and can give you SURE WINNERS for your FAIR from these SELECTED BIRDS. Tell me about your competition and let me quote you.

MY NEW CATALOG

You will find in this profusely illustrated 56-page book, complete descriptions of MY FARMS, FLOCKS, WONDERFUL WINNINGS, UNEXCELLED UTILITY QUALITIES, etc. A careful reading of this book will make you an Owen Farms customer. The results you will obtain from stock or eggs will make you my permanent customer.

A Fancier's Pride in His Work

Year by year, as our business has grown, we have discovered new and better methods of breeding, mating, feeding and housing. The four factors that go towards making blue ribbon winners. We want you to know all about "Mirimichi Quality," about our wonderful winnings at the World's Fair, New York, Boston and other shows, so we have prepared a catalog that gives you an insight into our "Quality." S. C. Rhode Island Reds, White Rocks and White Wyandottes. This book is free, so write for it today.

AUGUST, 1916

W. W. KULP—PIONEER POULTRYMAN

W. W. KULP, Pottstown, Pa., was born in 1861 near his present home. After attending Juniata College he taught school for two years, when his health failed in 1884 and he returned to the home farm to take charge of the poultry under an agreement with his father. He worked under this agreement for ten years, all the while starting flocks of standard-bred Rose and Single Comb Brown and White Leghorns, Barred Plymouth Rocks and White Wyandottes. He began advertising poultry in 1885
